CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philade'phia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Etevator Company.

> ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Ca Iton, New York

The Ritz-Carlton, Montreal

The Plaza, Buenes Aires

Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Carlton, Lonion The Ritz, Lundon

The Hyde Park, Lundon

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninetyone cities in the United States are always at the Architect's call and can assist you in making your elevator specifications 100 per cent correct.

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satusfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

ures for building construction for the year 1913 amounted to \$32,845,561. This is more than 21/2 million per month on the average. These figures compare favorably with 1912 for the total for that year amounted to only \$26,179,116. It must be born in mind. however, that the 1913 figures embrace all construction within the city limits. including government work and state construction, while thole of 1912 did not. Panama-Pacific construction also for the year amounted to \$6.018.373 so that everything considered private construction alone amounted to less than in 1912. However, the total amount represented by building construction compares favorably former years and if conditions have not been prosperous it has been as much the reault of an overcrowded condition of the building business as of anything else.

Figures for December amounted to \$2,534,068. This divided as follows: Private construction\$1,050,636 P. P. I. E. contracts.. ... 1,244,684 City and County..... 108,952 U. S Government work.. 129,796 Compared with other years the

cotals for December during the last ten years is as follows. December, 1904 \$1.282.419

December,	1905	 	 914,231
December,	1906	 	 4.140.984
December.	1907	 	 2,116,946
December,	1908	 	 3,223,201
December,	1909	 	 2,359,575
December,	1910	 	 1,169,131
December,	1911	 	 1,218,022
December,	1912		2,106,235
December,	1913		2,534,068
While con	parat		

good deal of variation during the past ten years the general average outside of the rebuilding period ranges under two millien dollars. While the figures for 1913 include all work even the amount for private construction comes up with an average year.

The general impression is that 1914 will be a better time. The tariff and currency measures are out of the way, Definite legislation has been passed and as soon as the country can adjust itself to the new order of things better conditions will prevail. It may be three months or it may be six, but San Francisco is sure to be made the financial center for the west under the new currency measure. So that there will be a more independent source of financing enterprises in the future and we will not have to go to Wall street to get money in the future.

Altogether the year has not been a bad one, From month to month the figures are as follows:

January	 	 3	2.655.990
Гевгиату	 	 	2.736.813
March	 	 	3,576,376
April	 	 	3,327,584
May	 	 	2,816,935
			2,830,306
July			3,826,998
August .			2,814,945
September			2,450,589
October .	 	 	2,152,909
November	 	 	1,092,048
December			2 524 000

Not so bad a showing considering the business and financial conditions and that the year ended in the number that has been considered unlucky since the memorable Thirteen sat down at the Last Supper.

"Now the New Year reviving old De-

The thoughtful soul to Solitude re-

Come, fill the Cup, and in the Fire of Spring

The Winter Garment of Repentance fling:

The Bird of Time has but a little way To fly-and Lo! the Eird is on the Wing."

So sang old Omar in his Epicurean philosophy. While the New Year may revive in us the old desires for beiter times and prosperous conditions toe fact remains that contemplation of past disasters or other days do not get us anything only insofar as they furnish precepts and examples and inspiration for things to come.

So with the New Year the "Builder" wishes its readers a prosperous time. May you not lose your nerve! past misfortunes not disarm you; may past successes not make you overconfident or uncharitable; And may the New Year bring renewed hope and more fair and equitable conditions.

The city of Houston, Tex., is sending out this advertisement:

"A perpetual bonns to manufacturers and merchants is offered by the city of Houston, Tex., by its system of exemption from taxation. Personal property, such as cash, househould furniture and evidences of debt are totally exempt from taxation. The Houston plan of taxation contemplates that merchandise, machinery of manufactories and all other improvements upon land shall he assessed at only 25 per cent of the value. Land is being assessed at a fair value. Take your money and brains to Houston and get the full benefit of all you create by your industry and enterprise.'

Vancouver tried this same plan and liked It so well that it finally exempted all improvements from taxation of any sort on the ground that to the best of its ability the community should remove any obstacle to the construction of improvements. This is in line with the idea of the single taxers and is the plan proposed by the League for Hume Rule in Taxation. It is effective advertising for a city.

The Chronicle is working overtime extiteising the Harbor Commission for bounding wooden piers and looks instead of concrete ones. To read the editorials that are daily being bonded out to the public one would think that the resent Harbor Band had hever constructed a concrete or perminent

Among the first nots of the present loard was to rebuild some of the ports that were presumed to be concrete that had been constructed by the former loard. Since that tun, there have been constructed more concrete dooks and there are more in process of construction than were ever constructed by any of the prederessors of the present loard. And the wooden wholves are being constructed as emergency cases to take ever of the crowded shapping that is increasing faster than do kage facilities increase.

The places where wooden wharves are being constructed are places where it is almost impossible to construct permanent ones, except at a gir it expenditure of money and a long delict The ones now under construction will pay for themselves before the others could be constructed While the Chronicle is criticising the Hurbor Board for constructing wooden wherees it would have a double criticism were the board to delay the construction until such time as permanent piers could be constructed in the places where the wooden docks are being built. Some places on the water front present great difficulties of construction on account of muddy bottom and the sweep of the tides. The present piers being constructed of ercosofed piles were started only after a consultation of the engineer for the Harbor Board and the Board of Engineers of the Chamber of Connerce They are supplemental to the dockage facilities already provided for shipping. And for this action the Caronicle linds an opportunity to distort a set of farts and criticise really effective work by suppressing the truth of the situation

Mr August Belmont received 112 millions for "hunnering" the New York subway. In the matter of a public linprovement of that sort why should the public pay anybody for his financial influence? And why should the city not build it itself? Somebody has to pay the promoters' fees and has to pay holders of watered stock their nividends. It goes in increased rents and increased traffic charges. It can rest finally on only one person and that is the patron of the road TELL people pay the tax in the end always. unly in the case of the private corporation they don't see it and they don't see the enormous over charge they pay for

It is said that John M. Esbelmen has been tendered the appointment as commissioner on the Interactive Commerce Commission made vicant by the death of John H. Marble. This is a compliment to Esbelman and a credit to President Wilson. For no John't the President could find many men in his

own party that would fill the office well but the work of the California Railroad Commission has stood out so conspicuously that the President could not but take notice of its effective results In this the President and Secretary Lane have shown themselves to be in line with Progressive principles. are seeking to get results by placing efficient men in office in the places where they are needed-non who can be depended upon to take the initiative constructive measure rather than being placed in a position to explain as was the case of Ballinger and others nader President Toft

The Farest Service has a fire looktion to the Sitteranes National Poestion to the Sitteranes National Poestin Vilvania. The lower is built entirely of logs and properts 115 feet in the old of the sitterane of the property of the logs at loand and without the all of any of the modern hoisting devices, the only means they had for holsten, were the eon rouges they had at their soluble loans and such block and tacket as was available. Under these conditions they have constructed a time that represents a great deal of labor and insecunty.

Author bendy is to fly in the Macharty If dl the great building of the Exposition (rounds. While this is an enounous but nong it limits the aviators for maneurering on every side. Perily is a wizard with bit marbine. For the law of gravity is always working and it is only a question of time till be tempts fate once too often.

Whatever couldst there may have man it be predictions of the weather man it fact remains that we have received plenty of rain Unprecedent precipitations have occured in various parts of the State. A report states that at Calistoga nine inches of rain fell during a period of twenty-four lours And in other places throughout the State there has been a generous, if not destrictive, downpour during the nost week.

Such a plenitude of rain does not linmediately 1:4-be hallding operations, but at means good for he country in the end and that means good for all, it emphasizes the need of conservation, in relatining the timber lands of the mountains and in impounding the flood waters not only that Locy do not do damage by being therated too quickly, but I at they be stored for future use.

A CHRISTMAS FABLE OF TWO BROTHERS.

on, a upon a time there were two brothers. The first was a cyspeptic persop who at Christmas time presented his little nephews and nieces with helpful books and requested them to be very, vee-rey careful of the precious volumes. Wherefore they hated Uncle Addison with a great batred. The other brother was an old bachelor who bestowed upon his small kinsmen stuff and objects that they could eat or break or with which they could make hurrid noises and told 'em to wade in, you ornery little whelps, and rig till you burst, and heat and batter till you split your eardrums, and break and shafter till you reduce the junk to powder, and otherwise enjoy your-And all his little relatives rose up and in one voice called Uncle Bill blassed. As the feller said when he

received a snake in a bottle of alcohol, "It is not so much the gift as the spirit in which it is tendered."

THE GREAT RAILWAY TUNNELS OF THE WORLD.

The world's greatest tunnels are to be found in Europe, and a brief summary of these in the Engineer shows that the greatest is the Simplon which 1- 124 miles in length. Two, the St. Gothard and Lotschberg, are over 91/3 miles in length. The Mont Cenis is a little over 7 miles in length. The Arlheig, in Austria, is 614 miles long. There are four tunnels between five and six miles in length, five between four and five miles in length, seven netween three and four miles, and sixteen tunnels that are over two miles The longest tunnel in this long. country, the Hoosac, is four and onethird miles long.-Scientific American.

GIANT COFFER-DAM FOR THE EQUITABLE BUILDING.

A vast reinforced concrete monolithic foundation is being built entirely ground the area upon which will be erected the new Equitable Building in New York city, a structure which will contain one million square feet rentable floor space, and will tower aleft to a height of thirty-slx stories. The infler-dam will be a solid concrete wall, six feet broad and eighty feet deep, extending eighty feet to solid rock. This will be the largest omce building yet constructed. It will weigh over 200,000 tons as against the weight of 102 009 tons of the Woolworth Bullding, 188,500 tons of the Municipal Building, and \$2,580 tons of the Singer Building. The steel frame work alone will weigh 45,000 tons, as against 25,out tons required for the Woolworth Building .- Scientific American, -

WASHINGTON'S OLD SURVEY FOUND CORRECT.

In protecting the headwaters of navigable streams under the forestveying Hines in the Appalachian Mountains where George Washington ian his famous boundaries for Lord Fairfax in pre-Revolutionary days. In 1751, Woshington, then 19 years of age, surveyed the line which was to divide Augusta and Frederick Counties, Virginia According to the organic act for the formation of these counties, if was required that the line should run straight from the head spring of the Hedgman River, one of the cources of the Rappahannock, to the head spring of the Potomac. It was first necessary to get the approximate nevessary to get the approximate tervening high points. Then, starting from the top of the Massunutten Mountains, the line was run straightaway to the northwest. In what is known today as West Virginia a large rock marks the southwest corner of Garrett County, Md., and the southeast corner of Preston County, W. Va. This is known as the Fairfax Stone, and is one of the land marks mentioned in Washington's notes. Washington, of course, used a simple compass, vet the new governmental survey, made with high-power transits and all the refined and accurate methods of modern surveying, has found but little variation, so carefully was the line run originally

Some Troubles Of The Estimator.

C. M. Watkins in the Wood-Worker.

So much might be said on this subject that it is a difficult matter to select the proper starting point. Almost any planing mill man can look back and recall many occasions when it seemed to him that there could not possibly be another business which offered so many and various opportunities for trouble, or which furnished so few reasons for continuing. Personally I think that fully three-fourths of all the men I know have at some time or other told me that their own business was absolutely the worst ever invented, so it does not seem altogether strange that we should so regard our own business.

I think that perhaps one of the most fruitful sources of trouble for the planing mill estimator lits in the almost complete lack of knowledge of mill work and what the term implies, on the part of the building public. Architects seldom take the trouble to inform themselves of the customs and methods in use in the particular locality in which a proposed building is to be erected. Indeed, more often than not, mill work, glass and glazing, stair work and carpenter work, are all jumbled together and specified under one heading, leaving each subcontractor to pick out his own branch of the work, and make his estimate thereon as best he may.

Then the owners, particularly in residence work, are absolutely ignorant of materials and processes required in woodworking, and are unable to give the architect any clear idea of their wishes in regard to the interior finish of the building. The architect, to save trouble and expense for himself, simply puts the whole matter up to the mill, leaving the estimator guess. from imperfect description, what is required. Seldom indeed are details furnished with plans, and the only guide or the estimator is his knowledge, gained from past rience, of how each individual architect is apt to detail his work. And then the details are quite upt to be something entirely different from what was anticipated.

I have new in mind a certain architect who always specifed box frames for brick walls about as follows: "Box frames shall have no jamb linings, but a wide stop, which shall be rabbeted to fit over jamb, and shall be wide enough to extend from sash to finished plaster, and the interior trim shall be nailed direct to this stop." Of course any practical mill man will see at once that if these specifications were followed strictly it would be impossible to replace a broken sash cord without first removing the finish and jamb lining, and quite likely tearing off a great deal of plaster in the process. Yet the estimator is expected to figure on work of this character, and to know whether or not this architect will listen to reason and allow the work to be done as it should.

Another frequent cause of trouble is a clause in the specifications which

reads something like this: "Anything shown on the plans and not specified, or specified and not shown, shall be furnished in the same manner as if both shown and specified. Should anything he required to make a complete and finished job, which is neither shown nor specified, the same shall be included" Almost invariably, where this clause occurs, the plans are noorly drawn, or some elevation or plan which is necessary is not furnished, so that the estimator has nothing to do but If he guesses too much he loses a job, and if he does not guess enough he is ant to lose money for his This is more apt to be the case, where a blanket proposal to furnish mill work according to plans and specifications is made, then where proposals are made by list only, with the distinct understanding that nothing which is not shown on the list is to be furnished. But in either case if means trouble for the estimator.

Then there is something else, which is perhaps less a trouble than a fault This is the almost universal lack among estimators of the quality known as "salesmanship." The expert knowledge required of an estimater renders it absolutely necessary that he should be, first of all, a good mechanic, and a good mechanic is seldom a good salesman. There have been some notable exceptions to this rule, and they but serve to prove my statement. If we should all be perfeetly honest with ourselves I think we would admit that our prime thought, when figuring a job, is that we must, by fair means or foul, beat the other fellow. We must make our bid the lowest or we will not get the order. And so obsessed by this idea do we become that we are quite apt to overlook the question of profit.

It can be safely stated as a truism that if we make our prices low enough we can secure all the husiness we can handle, but true salesmanship consists in not only getting business, but getting a profit. I have known estimators sending out letters with their bids telling the customer that if the bid was not low he could deduct 10 per cent, hoping thereby to get the business and make a great showing at the end of the year. This point is so unportant that I want to emphasize it. and I honestly believe it is the largest single factor which has to do with the great variations in mill bills. I have known-not one, but many-instances where the high bid was more than twice the low one, and I believe this to e due, in great measure, to the cause mentioned above.

Another troutic, when dies with the estimators themselves, is the one which was mentioned in The Wood-Worker some months ago, namely, that we are apt to overlook some thing in taking off our tiens. There is a variety of reasons which help to account for this, chief among which, perhaps, is the great number of things the average estimator is compelled to carry in his

mind. With perhaps six or seven contractors saying they must have blds at once, or within twenty-four hours and an equal number of contracts hanging fire, with all of which he must keep in close touch to avoid being "sold out," he hurries through the specifications, hurries over the plans, and does not take time to go back and check, trusting to luck and his past experience to prevent his making mistakes. because he has to get items from all the other plans and get back to his office and figure all of them. Then, again, he may forget to figure a floor, or the openings on one elevation (as I did once), because he wants to get home to supper. Needless to say, 1 got that job, and wished I had not,

I once heard a mill owner make the assertion that all such errors due solely to curelessness, but I believe him to have been decidedly in the wrong. I have been "called down" on several occasions for failure to estimate on certain plans, and upon putting up the plea that some had to be passed up on account of lack of time to take care of all of them, have been told that I should not allow myself ever to lack time to do anything. With the bosses driving and the customer kicking because his bid comes In late (in the same breath with his kick he will tell you that it was too high, anyway), is it any wonder that we make mistakes? The real wonder to my mind, is that we do not make more

SHORT COURSES IN ENGINEEHING AT IOWA STATE COLLEGE. The Iowa State College this winter

will launch a new field of activity unique in the field of instruction by state institutions. This year for the first time in its history short courses along engineering lines will be given. There exists in the state a large body of citizens engaged in the state's industries who are unable to conform to or to derive the direct benefit which they need from the formal educational plan. These short courses make manifest on the part of the state institution an effort to reach these citizens in an effective way with practical, condensed up-to-date instruction in engineering and industrial subjects. The short course in engineering is designed to do for Iowa's industries what the short course in agriculture has long done for agriculture. The session is December 29, 1913, to January 10, 1914. By running short courses in winter the state's educational plant is utilized to maximum efficiency. The short course falls at the annual holiday recess and the instructional force is free to give its undivided attention to the short courses. In addition to this at no other time could rooming accommodations be had for the large number

There are two general classes of instruction which this work is designed to provide: (1) to present the prob-

of short course students.

lems of engineering and industrial lines which the rapid advance of the industrial era keeps pushing into the foreground for solution, and (2) to provide a definite, systematic plan for the imparting of technical information of a fundamental nature to men who have no such means now available other than what they can "pick up" from trade and engineering journals and association conventions. In developing both fields the instruction is condensed for the busy man The courses given are intense and specialized, their sole purpose being to crowd the maximum amount of concrete and definite plan of conducting the work is by lectures and demonstrations, allowing opportunity for discussion and

recitation. The winter courses announced this year are offered in response to an insistant demand expressed for instruction for clayworkers, cement users and road builders. In clay work, In addition to elementary instruction, there will be taken up problems with which the clayworking industry is confronted, such as lamination, scumming and black coring The work in cement will take up in detail the questions of materials, aggregates and testing, while considerable emphasis will be placed on the making of con-crete. The road builders' course is given for the benefit of the practical roadmaker and is of value to those actively ir charge of road gangs and others interested in the subject of good roads. It will take up the matter of drainage, foundation and road construction, material for road construction and organization of road-building forces.

In addition to the courses in clayworking, cement use and roadmaking, there are offered other attractive courses dealing with subjects of related engineering interests in which in these days of the application of ower to every branch of activity nearly every layman has some direct vocational interest or less is interested in them as a "hobby." They include courses in gas engines, with opportunity for practical operation of the gas engine and automobiles, steam engines and tractors, power plants, drainage and the applications of electricity.

While the short course is an established institution at Iowa State College, the form of the engineering short course in the future will be largely determined the demand of Iowa's in-dustries and the response met with in the courses offered. The college is working in co-operation with all forces for the upbuilding of lows in adding to the growth of industry by the supplying, through its Department of Engineering Extension and by the winter short courses, practical instruction for the industries of the State. The short course constitutes one more component part in the plan for the provision of practical instruction in the trades and industries of the state and supplements the industrial classes and the correspondence study courses already offered. By stimulating the growth and development of such educational forces as these there will be opened to every boy or man in the state an opportunity to get the education be needs in his business or his trade and make him a more valuable man to himself and to his community.

Clayworking.

... Ten Periods—Isally, 2 to 10 A. M.
The following outline of the work
in clayworking is a very full schedule,
involving as it does the fundamental
principles of a die design manufacture,
drying and burning of clay wares. It
may easily be possible for the schedule
to be shifted to give more time to one
or two of the subjects to the exclusion
of consideration of the others. Should
the demand arise the decision will rest
with the majority of the class.
Scumming.

Various kinds of causes. Effect of various drying and burning methods. Methods of elimination. Chemical precipitants.

Black Coring.

Definition of this phenomena observed in many lowa clays. Its causes and methods of elimination.

and methods of elimination.

Lamination

Two kinds, "auger" and "die". The cause and effect on the burned prod-

nct. Methods of elimination.
Scumming—Discussion.
Review of the subject in the light of

Review of this subject in the light of the laboratory data obtained.

Discussion Meeting Available for discussion of any phase of the above subjects at the option of the class.

Clayworking Laboratory.

Ten Two-Hour Periods—Daily, 10 to 12 Opportunity for extra laboratory or research work in addition to the exercises in the schedule will be cheerfully granted within the limits of the equipment on hand to all who desire it upon consultation with the instructor in closure.

Investigation of Scumming.

Determination of soluble saits in

clay. Determination of proper precipitants to use Making of brickettes to determine the most advantageous drying and burning conditions.

Laboratory Exercises on Black Coring. Burning of brickettes of clay, showing this phenomena under various burning conditions, to arrive at the proper treatment for elimination of this difficulty.

Lamination.

The effect of different die construction on the low of various clays through dies—using a plunger machine—and the effect on "arious clays of changing the distance between the auger and die, using an auger machine—From the Clay-Warker.

THE PURAMID OF CHEOPS,

A number of people, who have commend of a volume of leisure hours, have repeatedly aired sagacious views regarding the possibilities of reconstructing the possibilities of reconstructing the old pyramid of Cheops located in the desert of Egypt, with the application of concrete. This pyramid, erected on a square base, each side of which measures 146 feet, the total height is 434 feet, the pyramid covers an area close to thirteen acres. When this structure was erected it necessitated the employ of not less than 16, 1609 artisons for a term of thirty years.

This means a total of 900,000,000 work-inc days.

The following approximate estimate of cost and material was made, which of course cannot be accepted as absolutely correct, for the necessary figures, such as transportation rates, exact labor cost at present and in the figure, used in the estimate were token from engineers and con-ractors notes who have been actively engaged in construction work in Egypt.

In the reconstruction of the pyramid are necessary 3, 350,000 cubic yards of limestane, 150,000,000 cubic yards of sand, 2,500 cubic yards of granite and 2.500 cubic yards of polished granite. The cost of this material alone would be about \$50,000,000; then the labor must be added, for which it would take 10 (00 men for 24 000,000 working days, meaning an expenditure of about \$50,-000,000. For the excavation of about 2,660,000 cubic yards for foundations. transportations, such "small" items as the quarters for the laborers, sanitary facilities, etc., another large sum must be spent, so that the total sum will easily reach \$150,000,000. These are astonishing figures and have a tendency to bring to the reader's mind the question of 'How did these Egyptrans, centuries ago, build these enormous structures?" We sincerely hope that this structure wall soon be reconstructed, using concrete blocks exclusively .- Concrete Etc.

THE BEAUTIFICATION OF VIENNA.

The Vienna municipal boundary extends up the forest-covered mountain slopes to a height 1200 feet above the Danube quays. In this district a scenic highway is being formed, which, as It winds round the mountain slopes, with every turn reveals a new view of the great city, lying many hundred feet below. In the less hilly districts a garden road over 300 feet in width .s planned. intersecting meadows and playing fields. The estimated cost is £2,000,000, and the corporation passed the estimates without a single dissenting voice

Concentiantly a building plan for the whole city has been sanctioned. The building area is divided into four zones. The first is central, where the maximum height permissible is four-or exceptionally five-stories. Cortain streets are to be widened. Over 1200 houses which seriously hinder trafficave been scheduled. If owners agree to rebuild within the next ten years to the new frontage lines, they are exempted from municipal taxation for the next eighteen years.

In the second zone, houses may not extend three stories; the third is reserved for factories and industrial purposes. In the last zone, houses are limited to two stories. Where the area is not yet built upon, they must be surrounded with gardens, not built in terraces. What these proposals mean from the point of view of public health for future generations may easily to magnined. In the buildness of its projects Vienna stands supreme—London pally News.

Firms desiring acws on special classes of buildings, such as Banks, Churches, Schools, Hetels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repented under "LOCALATIES" in the lost part of our news desney desneyment.

APARTMENT HOUSES

SAN FRANCISCO-Apartment house, 5 or 6 story and base. Class C construction, \$75,000 to \$100,000, Architect. Frederick H. Meyer, Bankers Investment Bldg., S. F. Owners, Trowbridge and Livingston. This building will be erected at the corner of Post and Williams Place. The lot to be improved has a frontage of 75 feet by a depth of over 100 feet. Interior finish will be of pine, Plans provide for a cement floor, metal window sash and frames and special gasoline storage tanks. Exterior of the building will be faced with cement plaster. Plans are complete and figures are now being taken.

GOVERNMENT WORK AND SUPPLIES.

Shelter of Troops in the Philippines. It is proposed by the War Department to spend \$885,000 for shelter for treops in the Philippine Islands. Permenent concrete barracks and quarters for a regiment of cavalry of the colonial army will cost about \$600,000, for a field artitlery regiment \$500,000, for an infantry regiment \$500,000, for a regimental cavalry stable \$200,000, and a regimental field artillery stable \$300,-600 . Consequently, barracks, quarters, and stables for the colonial army, consisting of four regiments of infantry, two of cavalry, one of field artillery, and the auxiliary troops, will cost about \$5,900,000, exclusive of administration, sewerage, power plants, etc It is estimated that the cost of storehouses and other buildings for the military establishment on the Luneta fill in Manila to replace present offices and storehouses, sewers, etc., will be \$2,000,000, making a total that will be

required to permanently house and provide for the colonial army in the Unitpulses of from \$5,000,000 to \$10 -000 000. Work to the extent of \$1,000 one only can be handled in the course of a year, owing to the labor and other on ditions in the Philippines. The conditions surrounding the building operattems in the islands are very trying, The supply of skillet labor and of suitable foremen is far short of the demand, consequently, it is usually necessary to pay a high price for inferior men. If every other condition were favorable, this alone would constitute s serious handicap. New men cannot be imported, as continuous employ-ment cannot be guaranteed, and new men are of little value, because if they even understand their business they econot communicate their ideas to the native labor, skilled or otherwise. The pine of day labor is cheap, but the quality is poor and not up to the demund. Due to the undeveloped state of the country and the great distance from manufacturers, materials are not cheap Steel and cemon must be brought from afar. Stone, even for rement work, is maccessible and above the average cost in the United States. Sand is about normal. Hardware, plumbing, etc., must add the cost of transportation to the original prices, and even the native woods, which are the only ones suitable to use, cost from \$10 to \$150 per thousand in the market. None of the items can be obtained within a reasonably short time, so that it requires constant waighfulness and foresightedness to avoid running out of materials, entailing annoyance and money loss, due to ressation of

San Francisco, Cal., Subtrensury.

As previously reported, the contract for the construction of two interior money vaults for the U.S. subtreasury, San Francisco, Cal., was awarded to Grant Fee, San Francisco, Cal. at \$53 .-648 In the prosecution of the work fixtures and material manufactured by the following named firms will be used: Globe and angle valves, Roe-Stephens Mig. Co., automatic air valves, American Radiator Co.; propeller fan and volume blower, American Blower Co.; nonconducting coverings, Philip Carey Mfg. Co.; volume blower motor, propeffer blower motor, and starting boxes, General Electric Co.; lighting fixtures, Dass & Seymour, Ind.; cablnet and tablet, Frank Adam Electric Co; corduit, American Conduit Co.; rubber covered wire, John A. Roebling's Sons Co.; snap switches, General Electric Co : reflectors, Holophane; combination time clock for vault protection cabinets, Sargent & Greenlenf, milamnieter, Weston Electrical Instrument Co., alarm bell, Schwartze: lead-covered cable, Hazard Mfg. Co.

Los Angeles, Gal., Steel Plates.

The following pids were received at the office of the U. S. Reclamation Service, Los Angeles, Cal., for furnishing 8 tempered steel race plates. Advance Machine Co. Los Angeles,

Cal., \$54; time 15 days.

Included in the list are: 1,193 gate valves ranging in size from 6 to 30 inches, 5,200 tons of cast iron pipe of various sizes, 300 tons of special castings, 900 east Iron gate boxes, 150 cast fron frame covers and 600 fire hydrants. Bids on this material will be received during Jannarv

USEFUL INFORMATION FOR CON-TRACTORS.

One thousand shingles, laid four inches to the weather, will cover one hundred square feet of surface, and five pounds of shingle nails will fasten them on.

One-fifth more siding and flooring is needed than the number of square feet of surface to be covered because of the lap in siding and flooring.

One thousand laths will cover seventy yards of surface an l eleven pounds of lath nails will nail them on.

Eight bushels of good lime, sixteen bushels of sand and one bushel of halr will make enough good motar to plaster 100 source yards.

One cord of stone, three bushels of lime and a cubic yard of sand will lay one hundred cubic feet of wall.

Cement one bushel, and sand two

bushels, will cover $3\frac{1}{2}$ square yards, one inch thick; $4\frac{1}{2}$ square yards $\frac{\pi}{2}$ inch thick, and $6\frac{\pi}{4}$ square yards $\frac{\pi}{2}$ inch thick.

On hushel of cement and one bushels of sand will cover 234 square yards, one inch thick; 2 square yards 34 inch thick, and 43/2 square yards 3/2 inch thick.

AMOUNT OF PAINT REQUIRED FOR A GIVEN SURFACE,

It is impossible to give a rule that will apply in all cases, as the amount varies with the kind and thickness of the paint, the kind of wood or other material to which it is applied, the age of the surface, etc. The following is an approximate rule: Divide the number of square feet of surface by 200. The result will be the aumber of gallons of liquid paint required to give two coats; or, divide by !8 and the result will be the number of pounds of pure ground white let. I required to give three coats.

UNITED STATES CIVIL-SERVICE EXAMINATION,

JUNIOR TOPOGHAPHER (MALE).

February 5 and 6, 1914.

The United States Civil Service Commission aunounces an open competitive for junior topographer, for men only, in February 5 and 6, 1914. From the register resulting from this examination certiciation will be made to fill vacancies as they may occur in the position in the Geological Survey, at salaries ranging from \$720 to \$1,200 a year, and in positions requiring similar qualifications, unless it is found to be in the interest of the service to fill any vacancy by reinstatement, transfer, or promotion. The salaries paid will be governed by the rating of the eligibles in the subject of training and experience.

Appointment to permanent positions in the Geological Survey will be made from the register of junior topographer eligibles. An examination will be held on February 4, 1914, to secure eligibles qualified as topographic aid, for temporary employment only, during the field season. An applicant who desires to be examined for both positions must like a separate amplication for each.

Competitors will be examined in the following subjects, which will have the relative weights indicated:

Subjects. Weights.

- 3. Contour construction (consisting of drawing contour lines from given perspective view)... 2 4. Topographic drawing and let-

tering 15
Training and experience 20
Total 190

Statements as to training and ex-

Time allowed, two days of six and seven hours, respectively. The first and second subjects will be given on the first day, the third and fourth on the second day.

No sample questions of this examination will be furnished.

Applicants must have reached their twentieth but not their thirtieth birth-day on the date of the examination, except that in the case of men who have had five field seasons' expertence in any Government bureau as technical field assistant doing topographic work similar to that executed by the Geological Survey, the maximum age limit is 35 years.

Competitors must supply themselves with drawing board not less than 15 inches square, drawing pen, pencil, scale, ink, and square or triangles.

This examination is open to all men who are citizens of the United States and who meet the requirements.

Persons who meet the requirements and desire this examination should at once apply for application Form 1312 to the United States Civil Service Commission. Washington, D. C., or the the Secretary of the United States Civil Service Board at San Francisco, No aunlication will be accented unless properly executed including the medical certificate, and filed with the Commission at Washington in time to arrange for the examination at the place selected by the applicant. In applying for this examiation the exact title as given at the head of this announcement should be used.

Issued December 19 ,1913.

UNITED STATES CIVIL-SERVICE EXAMINATION.

AID (MALE.)

January 21-22, 1914.

The United States Civil Service Commission announces an open competitive examination for aid, for men only, on January 21 and 22, 1911. From the register of eligibles resulting from this examination certification will be made to fill vacancies as they may occur in this position in the Bureau of Standards, Department of Commerce, at salaries of \$600 and \$720 a year and vacancies as they may occur in positions requiring similar qualifications, unless it is found to be in the interest of the service to fill any vacancy by reinstatement, transfer, or promotion.

The work of the Bureau of Standards is scientific and technical in character, consisting principally of physics, chemistry, and mechanical and electrical engineering. The Bureau employs a large number of expetts in each of these branches. Young men filling successfully the position of aid are eligible for promotions in the lines of work in which they have become efficient. The opportunity for study and advancement along the lines indicated is equal to that of the leading commercial or educational institutions.

Competitors will be examined in the

for consideration for this position. Statements as to education, training, and experience are accepted subject to verification.

Two days will be required for this

No sample questions of this examination will be furnished.

Applicants must have reached their nineteenth but not their twenty-fourth birthday on the date of the examina-

Each competitor should bring for use in the examination a small drawing board. T square, triangle, ink, pens, pencils, drawing instruments, and a scale, divided into sixteenths.

Under an act of Congress applicants for this examination must be examined in the State or Territory in which they reside and have been actually domiched in such State or Territory for at least one year previous to the date of the examination.

This examination is open to all men who are citizens of the United States and who meet the requirements.

Persons who meet the requirements and desire this examination should at once apply to the United States Civil. Service Commission, Washington, D. Cor to the secretary of the hoord of examiners at San Prancisco, for application Form 1312. No application will be accepted unless properly executed, excluding the medical certificate, and filed with the Commission at Washington in time to arrange for the examination at the place selected by the applicant. In applying for this examination the exact title as given at the head of this announcement should be used.

Issued December 19, 1913.

TAKING THE HEAT OUT OF LIGHT.

The chemist by synthetic processes can enable you to taste strawherry jam the can analyze the material that gives the seent of hyacinibs and reproduce it without ever having seen such a flower. But he cannot make light which will compete with the best that

nature has devised. And the lighting engineer has been helpless until quite recently, when the first steps have been taken in what is proving to be the right direction.

The firefly's most important secret is out. Its light is intermittent. And like almost all discoveries, it is so simple that the scientists are wondering that they have not noticed or placed any particular importance on that fact before. The heart beat is intermittent, for if it were not that organ could not stand the strain of action for even part of a lifetime. How long can you sustain a vigorous muscular effort? Only a short time, and then you must halt lest you invite exhaustion. However, you can make momentarily extremely violent efforts, and you can repeat these frequently if you be given time between to recover,

The shining thread of the electric ashort while than it ordinarily does during continuous service. M. Dussaud merely applied the principle of occasional, regular rests to his incandescent lamps, required them to give their best when at the white heat, and then, after that brief tax, gave them a longer period of repose ore calling them again to duty.

It is a fact that the actual heat of his filaments is unusually high, but because of the way his system works the light produced is cold—the lamp heing in service for so brief a while that it does not project heat waves. Besides this, the filament is equal to an unusual length of service. Remember, you have a similar example in nature, the firefly glows spasmodically and not steadily.

EXPOSITION ITEMS.

"Dazzle Patch," the fastest colt in the world, has been entered by M. W. Savage, owner of the famous Dan Patch, in the race meets to be held on the track of the Panama-Pacific International Exposition in June and Cetoler, '51.

He has also entered horses for the 23% class pace and for the 2:10 trot in both meets. Among other entries are "Electric Patch."

In a circular just published by Savage, who is also the owner of the International 1:55 Horse Farm of Minneapolis, Minnesota, he gives out an interesting account of Dan Patch, the sire of Dazzle Patch, who holds the world's record of 1:55 and who has paced 132 miles in an average time of 2:94%, and who has lowered the world's record for the mile fourteen times.

E. H. Williams Chalmer Munday

Munday & Williams Attorneys-at-Law

Special Attention Given to Building Law and Backruptcy Cases

Telephone Kearny 2622

San Francisco

Describing Juzzle Patch, Savage declares that at the age of 28 months the colt paced a half mile in 59 seconds, and at 49 months did the half in 56%, seconds, and the mile in 2.0246.

615 Phelan Bullding,

Savage declares that the Directors of the Exposition should be praised for their nerve and good judgment in offering equal opportunity to pacers and trotters, as shown by the two purses of \$20,000 each hung up for the 2.000 pacers, an innovation in barness racing.

The Festival Hall at the Panama-Pacific International Exposition is the result of the study of the Theatre des Beaux Arts type of French architecture and has the usual theatre arrangement of a foyer in front, and the stage with its accessories tebind a circular auditorium. The details are from the French Renaissance ornament, particularly from Le Petit Trianon and Le Grand Trianon.

The building is three bundred and eighty-six feet long and three hundred and seventy-six feet wide at the central part. The dome which forms the dominant feature of the design is two hundred and twenty-one feet high and twenty-one feet high ameter on the outside.

There will be an expenditure of \$800.000 by China at the Pannama-Paulon in the India at the Pannama-Paulon amount nut less than \$300,000 will amount nut less than \$300,000 will not used for the Chinese Pavillon, according to an estimate made by Dr. T. Chu, Commissioner of China, who recently arrived in San Francisco.

"The preparation now going on in China for this Exposition is universal, but is particularly noticeable in central China where there is great enlightenment and industrial civic development," said Dr. Chu.

"The privilion which will be built by China may be a permanent gift to the United States. Its type of architecture will be typically Chinese and an orclitect from my country will arrive in San Francisco soon to design the structure.

"In no country is greater enthusiasm or a national exhibit at the Exposition being displayed than in China, and commissions are organized in every province for the purpose of co-operating with the Chinese Government in making ours the greatest exhibit ever displayed by China at any Exposition.

"The Commissioners constitute a bureau and will maintain headquarters in every part of the Republic and there arrange for the exhibits and create additional interest in the Exposition."

"When I left for Europe I was confident that the Fine Arts Department would have an exhibition as strong as any ever seen in this country," declared John E. D. Trask, Chief of the nepartment of Fine Arts of the Panama-Pacific International Exposition.

"On my return I am not only confident, but positively assured that there will be in San Francisco in 1915, the very best exhibition of paintings and sculpture that has ever been seen on the Western Hemisphere, and in many respects the most interesting Fine Arts exhibit that has ever been eld in the world."

Trisk brought back to President Charles C. Moore and Director in Chief Frederick J. V. Skiff, silver plaques, replicas of the golden plaque presented by the Exposition to Baron Pierre de Coubertin, as a trophy to be contested for in the mooren pentathion, ore of the leviling athletic events at the Swedish Olympian games.

Trask visited ten foreign countries and while abroad conferred with the leaders in art of the world. He was highly successful in his mission and is enthusiastic over the art exhibit which is to be presented on the Exposition grounds in 1915.

OIL DISPLACES COAL IN PACIFIC COAST STATES.

On the Pacific coast coal is now used practially for household purposes only, and the consumption of coal in 1913 was about the same as in 1912. In the San Francisco market the use of fuel oil for generating steam has displaced that of coal. The only coal used for steam is that taken by the Pacific Mail Steamship Co. and the Japanese Steamship Co. for their vessels to the Orient, while fuel oil is used almost to the entire exclusion of coal on Puget Sound and on the railroads of Oregon and Washington. The coal trade of San Francisco has been largely supplied by British Columbia, but on May 1, 1913, a strike was begun at the British Columbia mines and all shipments to the San Francisco market ceased. On account of this strike rail shipments of coal from Utah. Wyoming and New Mexico were considerbly increased, and some shipments were made by water from Puget Sound, Australia, and Japan.

The production of petroleum in Califormia in 1913 is estimated at 95,000-900 to 97,009,000 barrels. Port of the output finds its way to household where gas manufactured from oil is used for cooking. At the close of 1913 to price of oil to consumers and steam plants at San Francisco was from 60 to 70 cents a harrel, which is equal to the price per ton (\$2.25 to \$2.50 for 100 Pocahontas or Cardiff coal.—U. & Geologics' Survey.

NEW RAILWAY ROUTE IN ALASKA DISCOVERED.

Some excitement was caused by the discovery of a feasible ratilway route from Portage or Passage Bay, on the west side of Prince William Sound, to Turnagais Arm, Alaska. Here a route was founded which, by use of a tunnel about 2 miles in length, will avoid the glaciers and yield low grades for both in and out hound traffic. The distance from tidewater on Prince Will'am is about 12 miles, and the proposed line will join the Alaska Northern

Isoliroad at about mile 63. Official information regarding the availability of Portage Bay as a terminal is still lacking but private advices are favorable By use of this route the distance from tidewater to the Matmuska coal field is reduced to about 136 miles, with only one adverse grade and that a low one. The information at band indicates that this route is certainly worthy of careful consideration.

Railway Construction of First Importance.

Communication with Fairbanks has been improved. During the summer several automobile trips were made over the military wagon road. mer, a new direct steamboat service has been established between upper tuken points and Fairbanks. Wagen road and trail construction has been continued by the Alaska Road Commission in different parts of the Territory, thereby reducing costs of transportation to various mining camps.
The results attained in building railways and wagon roads and establishing steamboat service have been of incalculable advantage to the mining industry of Alaska and have led to developments indicating something of the vast mineral resources of the Territory At best, the transportation is woefully inadaquate, and unless it be extended no great advancement in mining, except along the coast, can be expected Therefore railway construction is of first importance to Alaska, and second only to this is the building of a system of tributary wagon roads, -U. S. Geological Survey.

RIA ERSIDE ELECTRIC PLANT—A MUNICIPAL PLANT BUILT FROM PROFIT.

By Edward P. T Troy.

Municipal ownership of electricity has existed in Riverside for seventeen years. In 1895 the town issued bonds to the amount of \$40,000 to pay for the exection of poles and wires for the distribution system. The current was purchased from a company generating hydro-electric power in the mountains, and wholesaling it in the towns.

In order to protect the people from the unsatisfactory service of the company, the town, in 1900, made a further issue of bonds, for the sum of \$10,000, to pay for the building of a steam generating plant. With this small beginning, as the town increased in population, the service of the municipal electric plant was extended.

The report of City Auditor Prior shows a total value of the plant and its various funds amounting to \$513,-986. These assets have grown from the profit of the plant. All of the extensions, improvements and betterments have been paid for out of the surplus earnings. In addition, the original banded debt has been reduced to \$50,000. A depreciation fund of \$58,295 has also been accumulated, out of which are provided al' replacements. Beginning with this small plant, the people of Riverside now have a property worth over half a million of dollars, every dollar of which they have

paid for out of the receipts. At the

same time, the rates charged have been

lower than those of the giant com-

that furnish current to all the critics and towns in Southern Called towns in Southern Called towns in The highest fate is eight cents per kilowatt, the same as the Pacific Grand Electric Company is forcing the neople of San Francisco to pacific company collects in the latter city own company collects in the latter city own monthly bill charged in Riverside in Riverside in Riverside in Riverside in Riverside in the collects. In San Francisco, the minimum is one dollar.

The total income from the furnishing of electricity for tighting of homes and the streets, and for power used in business places and for pumping was \$113.339. The operating expenses were \$36.55.2, leaving a revenue from operation of \$48.986, or a profit of \$23½ per cent. Other receipts brought this revenue up to \$55,699. Deductions were made for depreciation, \$16.500, interest and repayments of bonds, \$1,270, leaving a net surplus or profit for the year of \$34.925.

of \$4,4,925.
For street lighting, lamps of medium candle power are favored. About 2,000 of them are used, being placed on low posts and at moderate distances along the street, glving an excellent illumination. High power are lights are but little used, here being but thirty-eighth on the streets, and only eight in the stores. The business of the plant is still growing. About 237 consumers were added during the year, and the consumption of current inverses of the present inverse of th

Riverside is a splendid example of successful operation of a municipal electric plant. Every other city in California may well follow her, with profit to the people. In Riverside there is no corruption of the courts or city council, nor interference with its political affairs, by a lighting corporation. Its chief of police and other officials are not appointed at the behest of any similar corporation, as in San Francisco.

THE HION AGE OF ARCHITECTURE.

"Nothing is up to the standards that prevailed when I was young," bemoans the average person after he has passed the stage when his creative activities legin to decline and he sees younger generation pushing to the fore with new ideas, and different methods of working them out. So likewise it is quite common with the general public to bemean "this commercial age of architecture," and to see a bright halo surrounding the achievements of middle age architects, which they believe have not and could not be equaled, certainly not surpassed, by present-day architects. Things which appealed to the appetite of youth, its physical, mental and splittual pleasures and ecstacles always appear to old age as far superior to similar modern things, yet If one could go back fifty years to again enjoy them, how different than the memory would the reality be! It is with pleasure we read the following comment of Eugineering Record on the fullacles, too commonly met with today, in the modern conception of the relative value of the work of the medleval and the modern architect.

"It is the joy of many to abuse the present and laud the pest, but it has been given to few so to rouse an architectural horner's nest as did a writ-

er in a London paper resently in bemouning the passing of the craftsman from his one-time leadership. Lamenting that the master builder of medieval times had given place to the mere architect of today, he brought about his ears the whole protesting swarm. Now granting that there were giants in those days who left behind them monuments of such eternal beauty that they have been the chief inspiration of all that has come after, it is by no means true that the ment belongs to the builder or the craftsman alone The great work of antiquity Was wrought by the combination of artist and mason in proportions now unknown, with time as their silent partner. However when the creative mind began its career its host was usually sleeping in the crypt it had planned a century or so before the building, as we know it, was finished. As to the most medieval work, it has gone to well-deserved decay long since let our imaginations run root in dreams of the faithful workman's loving artistry, forgetting the nameless and pestilent lunglers whose clumsy gers wrought allominations in wood and stone. And few even of the masterpieces have escaped the stupid and ruthless meddling of the lenovator. whether architect or builder by train-

"No, the old days were as full of bad design and worse execution as our own. The ruins of St. Mary's Abbey in New York, for instance, show as vile a grade of rubble as any chean contractor of the twentleth century could imagine and the building tumbled easily into the decay it deserved. Some of the good and stable work of the past has happily remained to us and has served as a model from century to century. The ordinary architect of today makes fewer mistakes by copying it than by trusting to his own magination Whether has predecessor began as artist or as mason makes precious little difference

"But before passing hasty judgment upon the architect of our own times, think a moment of the evil days upon which he has fallen in the medieval times he must perforce know only the technique of masonry-the rest was his art. If he were building a church the fine stimulus of the Gothic was his inspiration and his medium was craftsmanshin in stone. Today he must know masonry and concrete structural steel and sanitary plumbing, lighting and heating electric wiring and accoustics. The old congregation dia not need to read and mostly couldn't expected to be cold and generally was, could not understand the Latin of the service even if it chanced to hear it Little need for wonder or blame then if the architect, having to be a Jackof-all-trades, bungles a goodly numher of structures if he tries to cover His the whole range single handed training is of necessity spread rather thin and the wonder is not that he sometimes does hadly, but that be ever succeeds in rising out of the ourmoil into greatness.

"Besides all this he has to struggle against or make surrender to a complex commercialism that makes the machinery of construction terribly in-His predecessor did not have tricate to plan for buying his stone from one source, his steel from another and his

wood work from a third be was not bounded by agents of patented devices nor pestered by circulars of supplies offering him the usual architect's commission of - per cent.' If be were a grafter it was by malice prepense, and not by daily temptation. All these things the architect of today has to enduce, besides being called a slavish copyist if he turns to the best in antiquity and a commonplace innovator if he dues not

"His chief hope is in suiting oimself as best he may to new conditions, calling in technical idvisers on the details Which he cannot in the nature of things have time to master, even if he has the ability, standing the more firmly by the interests of his client as he confronts a regiment of sub-contractors, and remembering that he must be artist before being engineer or contractor Originality and resourcefulness is much more difficult to find than technical or constructional skirl, and if the architect is to be more than a master mason or boss concrete mixer it must be by the possession of these attributes. And looking about one cannot but realize that art did not die with the Gothic nor perish with the Compressing New necessities must bring new forms now just as certainly as they did a thousand years ago. And if the sketches of the Cuthedrai of St. John the Davine reincarnate the inspirations of the past, just so surely does the fine mass of the West Street Building, rising like a huge ancient keep against the western sky as one passes out onto the North river, bespeak the promise and the dignity of the age of steel. The times have changed and the architect must change with them."

UNITED STATES CIVIL-SERVICE EXAMINATION.

TOPOGRAPHIC AID, TEMPORARY CHALE).

February 4, 1914.

The United States Civil Service Commission announces an one a competitive examination for topographic aid, for men only on February J. 1914. From the register of eligibles resulting from this examination certification will be made for temporary employment as tonographic aid under the Geological Survey during the field season, unless it is found to be in the interest of the service to fill any vacancy by reinstatement, transfer, or promotion. The entrance salaries range from \$40 to \$75 a month. The salaries paid will the governed by the rating of the edgibles in the subject of training and experience, and in no case will topographic aids be advanced in salary bevond the maximum stated above until they qualify in and are certified from the junior topographer examination

Appointment to permanent positions will be made only of persons who qualify in and are certified from the junior topographer examination. examination for junior topographer will be held February 5 and 6, 1914. An applicant who desires to be examined for both positions must file a s-parate application for each. Failure to qualify in the junior topographer examination within a reasonable time will be considered by the department sufficient

suse for removal under the statute. The junior topographer examination is usually held about the same time of the year as that for topographic aid, tonographic aids who wish to qualify as junior topographer will be expected to do so within a reasonable time from the date of their appointment as aid

Competitors for the position of tomographic temporary) will be amined in the following subjects, which will have the relative weights indicatedo

Subjects. Mathematics (clementary, practical questions) Surveying telementary, practical questions; Topographic drawing Letter writing Training and experience......

In making certifications for employment from the register preference will e given to residents of the States where the persons are to be employed, Statements as to training and expersence are accepted subject to verification.

No sample questions of this examination will be furnished.

Applicants must have reached their twentieth but not their fortieth birthday on the date of the examination. Competitors must supply themseives

with drawing board not less than 15 inches square, drawing pen, scale, ink, and square or triangles.

This examination is open to all men who are citizens of the United States and who meet the requirements.

Persons who meet the requirements and desire this examination should at once apply for application Form 1312 to the United States Civil Service Commission, Washington, D. C., or to the Secretary of the U S. Civil Service Board at San Francisco. No application will be accepted unless properly executed, including the medical certificate, and filed with the Commission at Washington in time to arrange for the examination at the place selected by the applicant. In applying for this ex mination the exact title as given at the head of this announcement should be used

Issued December 19, 1913.

CALIFORNIA'S MINERAL PRODUC-TION FOR 1913 VALUED AT OVER \$95,000,000.

Increase of \$4,000,000 During the Year.

At the close of the year 1913 the Mineral industry in California continues to display a healthy condition and shows every evidence of continuing the remarkable rate of growth which It has maintained during the past several While the exact production figures for the year just ending, which are obtained by totaling the returns from individual producers, will not be available for another six months, it is possible to arrive at a close approximation of the value of the State's mineral output at this time

Petroleum, which has strengthened its hold on first place, will show a production of about 93,000,000 barrels, an increase of 3,500,000 barrels over the 1912 output. The most gratifying feature of the situation being the increase in consumption at a rate sufficient to not only maintain the pereficient to not only maintain the peresor the previous year but to show a slight increase over the average price of 46.7c which held during 1912. Thus petroleum alone, the crude product at the wells, will show a value of about \$43,590,000 or an increase of \$1,500.000 as compared to 1912.

Gold, which was the most important mineral product of the State for so many years comes second with a value differing but little from the 1912 figround numbers, \$20.000.000. ure. In Increased efficiency in dredge manufacture and operation continues to keep the output of this method of gold mining up to the mark, in spite of the fact that the class of material being worked is constantly becoming poorer. Deep mining is in a more prosperous condition than it was a year ago and there has been no important change in any branch of preclous metal mining.

The copper outlook as far as actual results go, has remained practically unchanged during the present year. The fume question has not yet been settled but an attitude of hopefulness prevails, and much further experimenting and scientific investigation has taken place, all of which augurs well for an early return to the greater exploitation of the unmeasured copper resources of the State. Production to 1913 will be valued at approximately \$5.500.000.

Cement output will show an increase of about \$2,000,000 in value, or a total of close to \$8,000,000. Crushed rock and granite will exceed \$6,000,000; bork \$3,000,000; bork \$3,000,000; sliver \$800,000, and quicksilver \$750,000, a decrease due largely to the low price of \$38,50 per flask which prevalled during the year.

The minor mineral products exhibited normal activity and growth and a conservative estimate of the total output for 1913 shows the gratifying increase of approximately \$4,000,000 over the 1912 figures of \$9:.472,335.

CONTRACTORS' LIABILITY RATES.

By E. T. Thurston.

The Daily Pacific Builder Is in receipt of the following letter from E. T. Thurston of Thurston & Co., General Contractors, wherein comparisons are made of rates charged by the State and by private companies. Mr. Thurston has gone into the matter very carefully,

The Daily Pacific Builder, 560 Mission Street,

San Francisco, Cal. Gentlemen:

In connection with the Workmen's Compensation Act passed by the last legislature, and which goes into effect January 1st, 1914, a Stote Insurance Department is provided for, empowered to adopt premium rates which shall govern those who insure with the State, or with mutual or Inter- insurance organizations, but not necessarily those who insure with private com-panies. For use during 1914 the Industrial Accident Commission has adopted without change a schedule of rates as submitted by the Board of Underwriters representing the private insurance companies doing business within the State, and has informed the

public through a published statement given general circulation that these rates are from twenty to forty per cent less than the compensation rates effective during the past year unler the Roseberry Act. We would understand this to mean that the new rates are at least twenty per cent below the corresponding 1913 rate: and in some cases are as much as forty per cent below such rates. In view of the fact that this is very far from the truth as respects building operations, the writer believes the statement should not go unchallenged, and that the facts should be placed before the public for what they are worth.

The comparison of the rates adopted for 1914 with the maximum Board rates for 1913 discloses the fact that the .914 rates are higher than the 1913 rates in the case of outside painting and composition roofing work respectively by a little more than one per cent; that the two rates are identical in the cases of reinforced concrete for buildings, installation of sky-lights and similar outside ornamental work: thence the reductions rise as high as eighteen per cent for plumbing and interior painting, and in one case only greater than that; namely, glazing, which shows a thirty-and-a- half-per cent reduction. Thus it will be seen that in only one case is the reduction as great even as twenty per cent.

The foregoing comparison is between the adopted rates for 1914, from which so far as the State Insurance Department and the mutual and inter-insurance organizations are concerned we can obtain no reducation, and the maximum Board rates for 1913, which so far as the writer knows were in no case of a general contrictor enforced, but were cut as much as sixty-six per cent. Many contractors were protected under a dit rate, and it will, therefore, he interesting to note that an application of the respective rates to a typical case of a reinforced coacrete building. including excavation concrete, carpentry, and general incidental and supervisory expenses showed that the average rate for 1914 would be 6,72% as against a maximum of 6.80% for 1913 under the Board rates. The average rate for 1914 is thus seen to be 2.65% less than the maximum of 1913 The Board flat rate for 1913 was 4 75% and individual companies in competition offered rates ranging from 3.08% to 2.25%, under which latter rate scores of general contractors are at present insured. Since the State Insurance De-Cortment offers no flat rate for 1914. but requires premium payments at the segregated rates as adopted, the general contractors in comparing present with prospective conditions, should compare the average Sate rate with the flat rate he has been paying. the typical case cited the average State rate is seen to be about three times the lowest tlat rate at present in effect It is not in a spirit of criticism of the Compensation Act, nor the Industrial Accident Board, which is undoubtedly undertaking the solution of the manifold problems presenting themselves day by day, to the best of its ability, but merely to correct a mis-statement of facts and set an important matter right as it affects the building industry and particularly general contractors for building operations. behooves every contractor to make

House arrangements to protect himself under the new last, and he was all base to pay the rates coaged for the have to pay the rates coaged for the evenues demanded, and it through the columns of your paper, you shall were under the moderness with them to undertake no contracts with making adequate provison for the modern adequate provison for the line as good service to a barge number of your readers.

Very truly yours, E T THURSTON

CITY WANTS A BLOCK.

A suit in condemnation was brought by the City Attorney in the Superior Court Wednesday against the owners of the block of band bornded by York, Hampstire, Mariposa and Seventeenth Streets. The property is desired by the city for the shorts and car barns to be spected for the municipal railway. The owners of the realty to be condemned are the O'Neil Estate Company, August Eggert, Meyer Ruef, Ida M. Cruksbank and Mary Foungartes.

BUILDING OPERATIONS FOR THE MONTH OF DECEMBER,

Building activities throughout the city for the month of December, as reported by the Bureau of Building Inspection of the Board of Public Works, shows a renewed activity in the building line

The total value of the estimate cost of those improvements aggregates the of those improvements aggregates the total constituction only and does not include constituction only and does not include the vast expenditures being made in the Exposition Grounds, much of which will prove of a permount character, nor does it include the permanent improvements being made by the United States Government in the fortifications and Administration Eurolangs within the city limits neither does it include the States quots in harbor improvements, docking facilities, Armory and State Narmal School extensions.

Figures compiled by the Bureau of Building Inspection are as follows:

Class		Nο	of I	ildgs.	Amour
Plass C				3 \$	857,250
Class "I					20,000
Class "C			1	8	538,352
Frames			13:	2	414.450
Alteratio	ms .		. 25	5	1.6,287
Total			40	3 31	956,329

SACRAMENTO BUILDING RECORD BROKEN,

It appears that Sacramento will close the year with the record for building at \$3.500,000 or very near that figure. The amount of building up to December 27th amounts to \$3.402,683, or approximately \$500,000 more than

In the matter of building progress Sacramento was sixteenth among the for the entire year of 1912, cities of the nation last month.

ANNOUNCEMENT.

The very rapid increase in our business the past year, has shown us the necessity of making such a change as would give our customers the very best service—and permit us to bandle the large volume of business to the best advantage.

Previously, our main office has been in San Francisco while our branch ofare and warehouse has always been established in Oakkand where we have excellent shipping facilities by water and ratt

Beginning with the New Year, we will conduct our business from the Cakland office and will maintain the San Francisco office for the service of our San Francisco and other friends who find it more convenient to call at that office.

At the Oakland office and warehouse, we will welcome all our old friends and customers whose association patronage we prize so highly. There we can show the full line of machinery which we carry.

All communications by letter, teleginm or long distance telephone should be addressed to the Oakland office, GRAVES-SPEARS ROAD MACHINERY

CO. First and Jackson Sts., Oakland Tel.

Lakeside 3060 1041 Monadnock Bldg. San Francisco

Tel. Sutter 755.

At Kansas City, Misseuri, there is a dispute between the people and the Gas Company. The company says it can keep its case in the courts for a thousand years.

There is the greatest need for the judicial functions of the Public Uti-lities Commission. Heretofore these corporations have always resorted to the courts and once they has possession of a franchise or of the people's money it was about a thousand years before any thing was done.

In our own case the Pacific Gas & Electric Company have arbitrarily advanced the rate to be paid. The Board of Suvervisors had already fixed that rate. But the company goes into the Federal Court and obtains an injunetion to prevent the enforcement of the ordinance and in the mountime makes the consumers pay the increased rate And so the matter rests. Whether or not the Board of Supervisors compiled with the law in the matter of fixing doubt that they have the right so to do. But in the meantime the matter is rates is to be decided. There is little lying in the same state in the courts and nothing is being done. There is no reason why this master should not he threshed out at once. The judge of the court has expressly said and it is up to the City Attorney to attend to it.

It is said that the Eugenic marriage law in Wisconsin is not working as well as could be expected. That in attempting to prevent the unfit from marrying the law in a measure fails of its object in that people who are prevented from marrying live together anyway.

Mr. Alexander Bell has another theory of the question. And that is to place a premium upon the fit marrying. His idea is that the principal obstacles to high minded and physically capable people marrying has been and is the industrial conditions and the difficulty In making a living These he would remedy by having the government extend opportunity to young men who are physically and morally and mentally fit, provided they marry and raise familles. This would respetuate the hest elements of the race he thinks. This seems to be a reasonable solution. What the country needs is the perpetuation of the best elements of the race As it has been the majority of people who married were the favored few who had good jobs from null or favor, who had inherited Westith, who were unprincipled enough to profit by crooked business methods and the ignorant. To shut off the unfit does advance the race. It simply decreases the birthrate. So that the end sought is not obtained. Mr Bell's theory is a positive method of dealing with the question and looks to the betterment of the race.

The action of the Canadlan parliament in excluding all laborers from the Dominion until March 31st next is directed primarily against the Hindoos. A recent court decision has opened the doors to such immigration and this drastic action has been taken because of the labor conditions on the Pacific Coast.

The recent case of California passing an alien land law caused wide criticism from certain Individuals in the Eastern States. When it comes to Canada taking action against the Oriental races the comparison with the action of our own State is mild in the extreme. They already have a law directed at the Japanese and the present order of the Canadian parliament is intended to exclude the Hindoos until some definite action can be taken.

President Wilson nas dodged the suffrage question propounded by Dr. Anna Shaw. And he has done a wise thing for Dr. Anna Shaw seems to be possessed of more enthusiasm than common sense. For instance the newspapers report her az saving:

There are three women in the United States today who might occupy the Presidential chair with a greater degree of success than any of the Republicans, Democrats or Whigs that have so far appeared. They are Jane Addams, Mrs. Carrie Chapman Catt and Mrs. Joseph Bowen of Chicago.

Susan B Anthony would have made

Proposals.

STATE OF CALIFORNIA DEPARTMENT OF ENGINEERING ALIFORNIA HIGHWAY COMMISSION

NOTICE TO CONTRACTORS.

SEALED PROPOSALS will be received at the office of the California Highway Commission, 515 Forum Bldgs. Sacramento, Cal. until 2 o'clock P. M. on Februiry 2nd, 1914, at which time they will be publicly opened and read, for construction in accordance with the specifications therefor, to which special

specifications therefor, to which special reference is made, portions of State highway as follows:

El Dorado County from El Dorado to Placerville (IIII-E-D-11-C), about 6½ miles in length, to be built of

waterhound micadam.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and beautiful and architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Catarh and Cold in the Head. It makes you miserable, doesn't it? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it mail you get the Clover Leaf Caterh Remedy, and use it. It will relieve you, and you'll wonder why you had not used it concer. We are so positive that this will relieve you of your Catarh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

Price 50 Cents
For Sale By All Druggists, or will be sent
by mail postpaid by the manufacturers,

Editorial Comment.

Registration for the ensuing year is now in order. The new Progressive party has declared itself. It is the banner under which all Progressives can unite. For political prejudices are usually handed down from father to son and from generation to generation and have their basis in ignorance and lack of breadth of view.

Governor Johnson well said that the Progressive party is the dominant one in this country. For there is no candidate but that declares limself to be progressive, be he Democrat or Republican or what not. So that in reality it is the Progressive element that is dominant in both of the old parties and there is no reason why people, outside of office seekers, should not get together and unite in a common cause.

In the main most people are right minded and seek the common good. But some are bilinded by self interest and want to put something over on the public and thereby advance therselves. There will always be different ways of looking at public questions. But those who look at things the same way make a mistake by hanging on the fetich of a party name when the name no longer stands for anything.

Registration is proceeding as rapidly as the Registration office can take cale of the electors. Many are standing in line at all hours of the day and in the course of a few weeks there will be a substantial showing for the comlog year.

Governor Hiram W. Johnson has announced that he will again be a candidate for Governor. He has frankly, clearly, and unmistakably stated his position. Inasmuch as the newspapers of San Francisco are such a set of substilized personal organs that it is hard to get a printed opinion of any body that is worth reading, the following editorial from the Sacramento Bee, without doubt the most ably edited newspaper in the State, may be edited newspaper in the State, may be

"Abraham Lincoln strongly advised the Nation against the folly of swapping norses while crossing a stream.

And, although the crisis of which he spoke was one in which he was personally the dominant figure, all mankind today recognize the sagacity and wisdom of his advice.

California is still in midstream.

She has progressed well into the waters, but there is considerable distance yet to go before she can land her hurden safely on solid ground, confinent the advance and Progressive policies she is carrying will be placed high and dry above the menacing

waters of corrupt politics and Big Interest schemes,

Against his own personal, financial, mental and physical interests, Governor Hiram W. Johnson has decided to the importunities of those most anxious for the preservation and advancement of true Progressive policies, and for the continued welfare of the State through modern humanitarian and husiness methods.

At a great sactifice, he has given up comfort, and peace, and financial hetterment, in order that for four years more the reforms which already have henefitted California so greatly shall be placed above any reactionary political flood.

There is nothing of vanity in the composition of the Governor. In fact, he is his own severest critic. He minimizes the necessity for his own personal leadership in the present crisis, but wisely has given in to the judgment of others.

That judgment has been right along that, no matter how sever the burden nor how great the imposition—it has become the absolute and imperative duty of Governor Johnson to head the Progressive Party, and head it in the Gubernatorial fight—that, without him in the front of the battle as the Gubernatorial candidate, there would be danger not only that the Progressive movement would be checked where it is, but that even the fruits of the last three years would be lost.

Only those most Intimate with the details preliminary to the announcement today can appreciate this act by Governor Hiram W. Johnson—an act which is the acme of personal sacrifice.

For another campaign is distasteful to Hiram W. Johnson. The past three years have crowded him with work and with worry

The Governor's personal choice was to retire from political life and devote himself to his profession—in which he could make his official salary over, and over and over again with not one-tenth the vexation, and trouble, and annoyance, and intense and sleep-destroying labors that have been and that will be his in the Governor's chair. Next to that his personal preference

was for a seat in the United States Senate.

And certainly none could blame him therefor. He could be elected thereto without any trouble. There he would

have a congenial and comparatively easy task.

And he could—at the Congressional recesses—extend his income into very large figures by accepting any one of

the very flattering offers he has received from lendure bureaus.
So that, in plain English, in announcing today that he will run again for the office of Governor, Hiram W. Johnson has thrown money, personal inclination, personal comfort, and peace of mind to the winds.

He has weighed all these things in the halance with PUBLIC DUTY and he has uncomplainingly taken his stand and stripped for the battle

Surely, The People of Cultforms will not allow this sacrifice to have been made in vrin."

The Chronicle states that the Currency Measure is in the main a good law. It, however, finds various faults in the measure chief of which it states That the currency for whose redemption the banks are made amply responsible is made to . ppear to be Government money. It further states that there can be but one motive for that deception, and that is to prepare the public mind for actill government money as the sole currency.

So far as the people generally are concerned what would be the difference? What the Chronicle fears is the fact that the National banks will not any longer be able to issue their own notes and have them circulate as money from the fact that they are guaranteed by government honds. These banks will therefore lose a considerable part of their control over the money situation and will be descrived of the profit that results from the loss or destruction of the same. What in the end is any kind of money but a guarantee to pay and certainly the government's guarantee is as good as any hank's

The parcels post has successfully refuted all the duleful forehodings that were prophesied about it and has positively proven that the government can conduct such a business just as well or better than the express companies, with all their much talked of efficiency of a private emporation. A newly organized service without precedent to guide it, it has met the problems put up to it by the evtraordinary business of the holidays with efficiency. It was not swamped with the rush of Eusiness, but delivered them to their destination with certainty and dispatch,

There is a reason for this. The postal service itself is organizel with a high degree of efficiency. It employs men under the merit system. While the salaries it pays are not large, it provides a test for entrance and the guarantee of a living enables it to get hold of and keep competent men. This system it has extended to the parcels post and it can at once handle it with the same degree of efficiency. The extension of the system that begins with the new year will look to the accommodation of the public who have so long paid an exorbitant tribute to the express companies.

The Post Office and the Panama Canal are a complete rswer to the critics who misst that the government is incapable of undertaking enterprises required by the public wel-

The San Francisco Caroniele published its annual edition last Monday It is a compendium of the progress of the state and presents an array of facts and figures and idustrations of wonderful wealth of the State California is a great state. Great in its geographical area, great lu its coast line and sea provileges, great in

its scenic wonders, great in the variety of its climate and great in the wonderful diversity of its products. It possesses the highest mountains and the lowest valleys in the United States Its climate ranges from the land of perpetual snow in the high Sierras to the subtropical seasons of its adjoining valleys. It borders for 1200 miles on the boundless Pacific ocean. the path of the world's commerce. Tits scenic places are the wonders of the world. Its product embraces everything in agriculture from the rice of the swamps to the hardy cereals of the north and from the pineapple and citrus fruits to the winter apple. minerals range from the petroleum in which it leads the world in production, to gold which first made the prime of California famous throughout the

A review of the progress of the State brings all these facts into view. Californians have every reason to be proud of their State For here the great Creator has certainly bestowed his favors with a lavish hand. In no other place is there such infinite variety and in no other place are there so many comforts and enjoyable places for the abode of man.

Theodore Bell is out as the champion of the irrigationists of Modesto and the Turbock districts and has filed suit to prevent San Francisco from getting a water supply from Hetch-Hetchy under the Act of Congress providing the grant. Here is another zealous patriot of the great State of California that should be damned to everlasting fame

The welfare of the State and the whole Paritie Coast for that matter depends upon the prosperity and the future greatness of the port of San Francisco. The first and most important need of the urban population that surrounds the bay is an abundant and pure water supply. This has been fought out and the City has been just to unfold expense to educate the Easterners on the subject leen fought out on the floor of the House and in the United States Senate and before the Itesident of the United States. Now comes Theodore Bell, a citizen of San Francisco, and in the capacity of attorney for the Irrigationists tries to tie up the matter in the courts. It was shown before that the conservation of the flood waters of the Tuolumne by the City would give the irrigationists more water than they ever had before,

Bell was ever the leader of the nopular element in the Democratic He represented his district in party the United States Congress. He has proved to be a political weather cock and is now seeking to prevent the consummation of the oberished scheme of all of our public spirited citizens to obtain a pure and abundant water supply for ourselves and those who come ifter. Surely the people of California will have cause to remember Theodoro Hell and Senator Works In the days of the Grecian republic they would have been forever banished from their city and had they been citizens of early Rome they would have been thrown from the Tarpeian rock.

The State Board of Control has ordered the State Departments to use the Parcels Past instead of the express company. Having had the davine right to charge the people whatever it liked the express company is slow to realize that the time has come when it must come out in the open and take an even chance with everybody else steam roller. To show how slow it is to realize the situation the following account of its attitude in regard to carrying the license tegs for mobile and chauffeur budges given in the Sacramento Bee is illustrative:

"The State Board of Control is congratulated for ordering Motor Vehicle Department of Califorms to change its system of sending out automobile license plates and chauffeurs' badges, taking the carrying of them away from the Wells-Fargo Express Company, and banding it over the the Parcel Post.

Wells, Fargo & Company have made about \$50,000 this year out of this work, and the same every subsequent year, if the former plan has been continued.

Finding itself liable to lose the job because it was charging 50 cents for the delivery of these automobile license plates while the Parcel Post would deliver them for 29 cents, it first made the flat rate of 35 cents, and then, in order to save itself, came down to 25 cents.

Under the circumstances, no man or woman will object to paying to Uncle Sam 6 cents more for the delivery of a license than he would now have to pay to Wells, Pargo & Company.

In fact, the average citizen, knowing the facts of the case, would prefer to pay the 29 cents to the Parcel Post rather than have Wells-Fargo deliver Usem free."

th ville Wright, one of the brothers who were the first to fly successfully, annunnes that he has perfected a stabilizer for the aeroplane that makes it practically fool proof and increases the factor of safety in aerial navigation many fold. One of the main features of the mecoames of flying is to propel the plane so that the air acting as a flying wedge under the planes produces a lifting force equal to the downward pull of the force of gravity. The automatic stabilizer is supposed to take up any change in the momentum of the plane so that should the machine he slowed down below the danger point the plane will adjust itself and regain its equilibrium.

This invention may mark a decided step in the progress of aerial naviga-When a machine will automertically right itself and land squarety if anything goes wrong with the power it leaves the aviator free to give his attention to other things and removes the principal danger to the learner.

A contemporary has estimated that since the average length of a railroad journey in this country in 34 miles, and a passenger may take 2,275,122 such journeys with only one chance of being killed, it would take him, at two tibs per day, 3,792 years to run the full gemut of risk. That is to say, if the one fatal accident happened to him in the present year, it would have been necessary for him to start his railroad traveling at two trips per day, in the year 1879 B. C. It must be barne in mind, however, that he might be killed on his very first triu-

Address By Knowland

Pacific Coast Terminals and a Heview of Recent Legislation by Congress for the Development and Encouragement of Water Transportation.

Address delivered by Hon, Joseph R. Knowland before the Tenth Annual Convention of the N-thonal Rivers and Harhors Congress, Washington, Dec. 4, 1913.

Mr. President and ladies and gentlemen: To the gentleman from Pennsylvania, Congressman Kelly, who a few moments ago spoke so eloquently of that State, and to the chief executive of New York, Gov. G'ynn, who has just taken his seat after fairly staggering us with an enumeration of the big things being accomplished by the Empire State-to these gentlemen I would say that I hall from the great State of California, whose beauties and wonders are indescribable. Had the ancestors of these genelemen first landed upon the shores of that Pacific wonderland the great Eastern States mentioned would today I fear be deprived of the valuable services of their two most able champions. Should I attempt to describe the resources of my native State, or endeavor to enumcrate the great things we are accomplishing, my time would be exhausted before I touched the subject to which I am supposed to address myself. We hope, however, to welcome the delegates of this convention to California in 1915 so that you may see for yourselves what words are inadequate to describe.

Referring but briefly to the criticisms by Gov. Glynn of the expenditure of \$6,000,000 and more at the Mare Island Navy Yard, located in California, I will say that modesty prevents me from directing attention to the fact that I have, until very recently, represented the district in waich that yard is located, and that during my term a great part of the large sum was appropriated. Should I reply I might be compelled-although of course it would greatly emharrass me-to direct attention to the fact that the large and generous appropriations demonstrated the advisability of sending live men to Congress. Just a word, however, touching the utility of the Mare Island Navy Yard and the efficiency of its working force. Several ships have been built there, and during recent years three naval colliers or fuel ships. Sister ships in two instances were under construction at the same time at the New York Navy Yard, and when the Navy Department figured up the cost, the plans being identical, it was found that the Mare Island Navy Yard, way out in California, had built both ships less money. But I must get to my subject.

Pacific Coast Ports Preparing for Opening of Panama Cuani.

The people of the Paddic coast are fully alive to the trenendous importance of immediately enlarging and otherwise improving the terminal facilities at the various ports to meet the increased demands of commerce expected with the opening on the almost immediate future, of the Panama Canal.

Experience extending over a period

of many years has demonstrated the advantages and necessity of State or municipal control as contrasted with that of corporations and individuals. This awakening has, in many localities, resulted in the invitation of actions in the courts and in insistant demands for legislation simed to place the ownership and administration of terminals in the hands of the people, where they belong, so es to accord to the smallest shipper the same advantages and facilities which heretofore and in too many instances were enjoyed exclusively by favored corporations and large shippers

Congress Legislates to Prevent Throttling of Water Competition.

In so far as it exercises jurisdiction. the Contress of the United States has endeavored to assist in the movement to provide for the fullest utilization by all the people of the great rivers and harbors of the country, upon which there has been expended by the Government nearly \$700,000,000. Not only has Congress provided the funds for improvement, but it has gone a step further and enacted legislation to prevent the throttling of these courses, the great highways of the people, where exclusive franchises rights of way cannot be granted. Much of this recent legislation almed to maintain the competitive value these waterways has emanated from the Committee on Interstate and Foreign Commerce of the House of Representatives. As a member of this committee and an enthusiastic advocate of the fullest development of our waterways. I am proud to say that in the framing of some of this legislation I have taken at least a small part. Before discussing the terminal facilities of Pacific coast ports, I will refer very briefly to a few of the recent legislative enactments aimed to aid in the Nation-wide movement, led by the National Rivers and Harbors Congress, for a maximum utilization of the facilities for water transortation.

Legislation to Protect Water Traffic Proposed in Bill of 1910 Amendatory of Interstate Commerce Act.

In 1910, when the bill creating an interstate commerce court and amendutory of the then existing interstate commerce act was pending before the Committee on Interstate and Foreign Commerce, it contained a proposed section, known as section 12, which provided that no railroad corporation which was a common carrier subject to the act to regulate commerce should bereafter acquire, directly or indirectly, any interest of whatsoever kind in the capital stock of any railroad, or purchase or lease any railroad with which it was directly and substancompetitive. I proposed an tially amendment in committee adding water corriers to the Inhibition which the committee adopted. The hill as then amended provided that callroads could not acquire competing water carriers or water carriers purchase competing rallroads. On the floor this section was stricken out, and I need not here mention the influences t at were responsible for its elimination.

While this same bill was pending in the House 1 proposed the following amendment, which was adopted by a vote—of axes 106, noes 17:

Whenever a carrier to redired in competition with a water route or routes shall reduce the rates on the transportation of any kind of trafficit shall not be permitted to increase such rates unless after bearing by the Interstate Commerce formission it shall be found that such proposed increase rests upon changed conditions other than the elimination of water competition.

Panama Canal Act Protects Shippers.

With but a slight change in phraseology this amendment remained in the bill and is now a part of the interstate commerce law. Its effect has been generally beneficial, but it did not go far enough to meet conditions that it was believed would exist with the opening of the Panama Canal. This is why there was written into the Panama Canal act, at the insistence Pacific coast shippers, the section that prevents railroad-owned ships from passing through the Panama Canal where they "compete" with their rail lines for business. Such "competition" is take competition aimed to minimize the competitive value of this great waterway. This provision does not deny, as some charge, ratiroad owned or controlled ships access to the canal when engaged in foreign trade. line with what I regard as sound public policy, it prevents allroads from practically paralleling their own rail lines by boats, which should not be permitted if the canal 2 to be of any real value to shippers throughout the United States.

While we were not successful in 1910 in writing into the law on amendment preventing railroads from owning competing water lines, the Panama Canal act of 1912 squarely meets the situation. The act provides, in section 11, that after the 1st day of July, 1914, it shall be unlawful for any railroad carrier, subject to the act to regulate commerce, to own, lease, operate, control or have an interest whatsnever in any common carrier by water, operated, not only through the canal but elsewhere, with which such railroad does or may compete for traffic. also confers upon the Interstate Commerce Commission power to extend the time during which railroads may operate such water lines if, after investigation, they are convinced that such water service is being operated in the interest of the public and is of advantage to the convenience and commerce of the people. This extension, however, cannot be granted to railroads. which would operate ships through the Penama Canal in violation of the act. applying only to other localities.

The framers of this law, anticipating conditions likely to prevail with the opening of the canal, conferred upon the Interstate Commerce Commission additional powers, enabling that body to establish physical connections between railroads and the docks of water carriers. The commission was also empowered to establish through routes and maximum joint rates between rail and water lines: to establish maximum proportional rates by rail to and from the ports to which traffic is brought or from which it is taken by the water carrier

If interstate railroads enter into arrangements with water carriers operating from a port in the United States to a foreign country, through the Panama Canal or otherwise, for the hand ling of through business between the interior points of the United States and such foreign country, the Interstate Commerce Commission may require such railroad to enter into such lar arrangements with any other steemship.

Vessels permitted to to engage in the coastwise or foreign trade of the United States are probibited, under this act, from passing through the canal if such ships are owned or controlled by persons or companies violating the Sherman antitrust law The provision granting free toils through the Panama Canal to Ainerlean coastwise ships is in the interest of the water shiper.

Thus it can be seen that Congress has taken advanced steps that should give an impetus to the movement for the public control of water terminals. The Pacific coast is moving rapidly in this direction, as I shall attempt to show.

Port of San Francisco.

Practically the entire harbor front of San Francisco, approximately \$ miles in length, is under State control and administered by a board of three State harbor commissioners appointed by the Governor. The port of San Francisco receives no appropriations from the State or city. The State law requires that the harbor must be selfsupporting, the cost of improvements, including the building of wharves, dredging, and the construction of sea walls, together with the expenses of administration, to be provided for out of the receipts. There is also a provision stipulating that narbor charges shall not exceed such "ates as necessary to meet the cost of construction. operation and maintenance. In private and returns would be demanded upon the total value of the property and improvements, with the result that much bigher rates would be charged. The belt railroad is controlled by the loard. Practically no long leases have teen granted, and every shipper can obt in accommodation at reasonable

Privite to 1911 the State had control of the water front and tide lands of the chief harbors of California, namely, San Prunesco, Oakland, Los Angeles, San Diego and Erreka. At the session of the legislature which convened that year the State of California transferred these water fronts and tide lands, with the exception of San Francisco and Eureka, to the respective cities upon which tone border.

Among the commercial bodies of San Francisco there has been considerable agitation in favor of turning over to that city the control of the water front, the claim being made that San Francisco has no volce in its management. Now, when it is desired to issue bonds for improvements on the San Francisco water front, it is first necessary to appeal to the legislature to submit to the people a bond issue. which the voters of the entire State must approve at the next general election. Even when this is done the State does not pay the interest on the bonds or retire them at maturity, although the credit of the State is pledged. Which possibly makes the rate of interest less. Under the State law these bonds must be taken care of out of the funds accumulated from harbor receipts. It is charged that it might be possible for localities interested rival harhors to retarl the development of San Francisco's water front: that it is sometimes difficult to explain to the voters of the State that the large bond issues for San Francisco Harbor improvements are not a burden upon the State It may be stated, however, that so far there has been a disposition on the part of the people of the State to grant the necessary authority for the issuance of bonds develop California's chief port. For instance, a \$9,000,000 bond issue now available for improvements which are rapidly being made, and another issue of \$10,000,000 is contemplated.

At present the piers and bulkhead wharves on the San Francisco water from toffer about 5 miles of berthing space. In a recent report of the bands of State harbor commissioners their statement is made that dock facilities may be so enlarged as to give 44 miles of berthing space.

Onkland Harbor, Directly across the bay from San

Francisco, and on the continental side, lies Oakland Harbor, with 20 miles of available shore line. The city of Oakland has fought for years to retain control of its water front. In the early tifties the then town of Oakland made some unfortunate grants of valuable rights on the barbor to an individual These were later transferred to a railroad corporation. It has only been within recent years that the city has obtained substantial control of its entire water front. This has been due to court decisions, legislative acts, and favorable compromises. The city has already voted \$2,500,000 for improvements and has under way the building of reinforced concrete wharves and a quay wall 3,700 feet in length equipped with railroad tracks, steel warehouses and machinery for the bandling of freight. There is also being built a retaining wall across the Key Route basin, on the western water front where most extensive improvements are contemplated. The city plans eventually expend \$20,000,000, municipal belt railway system planned will extend around the entire city front, connecting with every railroad that enters the city-three transcontinental railroads now entering Oakland-and with every wharf, with spurs leading to manufacturing plants Under the proposed development of the water front there will be 46,000 feet of municipally owned docks and 46,000 feet of privately owned.

Col. Thomas II Rees, the Government engineer in charge of the Oakland district, has just reported a most comprehensive plan for the fullest de-

velopment of this western water front, a project that will allow of such exprinsion as to meet fully the growing demands of the future.

Harbor of Richmond.

The Rees plans for the east San Francisco Bay district include the harbor of Richmond lving north of Oakland. The enterprising people of this growing community have set an example of liberality in co-operating with the Government that many loculities might well follow. The city has already voted \$1,170,000 to be used for harbor improvements and in addition has authorized the submission of another hand issue, which provides for the payment of \$75,000 per annum for a period of five years to be applied toward defraying the expense of Government dredging. Part of the receipts from the harbor will be set aside for a like purpose. The entire inner harbor will be municipally controlled.

Richmond, fast becoming a manufacturing center, will offer, when the present plans are completed, fully 13 miles of berthing space. At least 7 miles of the water front will be municipally (ontvolled.)

Los Angeles Harbor.

If by chance there is in this assemblage an individual bailing from a locality which nature has provided with harbor possibilities, but where there is an apparent disinclination to develop these facilities which lie at its doors, I would direct this individual's attention to the city of Los Angeles, that wonderfully enterprising community in southern California. The city of Los Angeles was originally 20 miles from the ocean. Appreciating the impossibility of bringing the great Pacific to its doors, but realizing the necessity for a water terminal, this city, with the nerve to tuckle big projects, did the next best thing by extending its boundaries 20 miles to the ocean by annexing cities bordering on the water and strips of connecting territory, and did all this in order that it might vote londs to improve the hurbor known, if you please, as the harbor of Los Angeles. Already the city voted five and a half million dollars and has agreed to expend an additional five millions in the near future. with larger sums to follow.

The part of Los Angeles is controlled entirely by the nunleirality, which, through a board of harbor commissioners, makes all rules and regulations for the government of the harbor, fixes all pilotage, dockage, wharfuge and bandling charges, and operates the port as a municipal enterprise,

The city awas 394 acres in the outer harbor of what was originally sub-merged land. Of this, 154 acres was lessed by the former city of 8an Pedro to private parties, who have reclaimed it and improved it with wharves and warehouses. Of the balance, the city has just completed reclaiming 66 acres, which are being improved with reinforced concrete wherves and steel tronsit sheds, and plans are under way for reclaiming 138 agies more.

Approximately 1.300 ocres of tide and submerged lends in the inner harhor were originally covered by tide land patents, the validity of which was disputed by the city and are in Higariton, the city winning Hs suits in the superior courts of Los Angeles

County, and the case is now pending in the California Supreme Court.

There are now 24,905 feet of privately owned wharves along the water front held under franchises or permits, and the city has 1,985 feet of municipal wharves, most of which have been recently built. It also has under construction 2,590 feet of additional wharf, of which 2,520 feet will be of reinforced concrete, costing approximately \$176 a linear foot

The city also is constructing 1,800 feet of steel transit sheds and 1,530 feet of wood frame transit sheds, besides doing a large amount of dredging.

Because of the Involved condition of titles to some of the property covered by railway terminals at the harbor and the desire of the cl'y to open the harbor to access by all railroads, as well as by paved streets, a terminal agreement has been agreed upon which virtually makes the railroad companies and the municipality copartners in the terminal, with the city in control.

There are on present Gavernment harbor lines approximately 20% miles of water front, most of it unimproved. This can be greatly increased by dredging slips, but only a few such slips have yet been definitely determined upon. The possibilities of the harbor, as shown by E. P. Goodrich, the consulting engineer for that city, will afford more than 100 miles of water front when fully developed.

Sno Diego Harbor, The legislature of 19!1 granted to the city of San Diego control of its entire water front. The city has already voted a million dollars for a municipal pier, which is now nearing completion. This pier wall be equipped with railroad tracks and every facility expeditiously handling freight The total length of bulkhead at San Diego is 50,500 feet, giving a deep-sea dockage of 13 miles and a total coaster dockage of 6 miles. Very extensive plans have been prepared by the municipality for the future development of the harbor to meet the needs of increasing commerce. The importance of San Diego Harbor will be greatly increased with the opening of the Panama Canal, as it will be the first Pacific port in the United States for shins bound north after passing through the great waterway. The municipal wharves now under construction will be of concrete and steel. Private wharves are leased from the city, the administration of its entire harbor front being under a board of municipal harbor commissioners.

Harbor of City of Portland.

Portland is now paying dearly for its past mistakes in permitting railreads and private interests to gain control of practically its entire water front. The result is that the city is now struggling to regain control of this valuable property by condemna-tion proceedings. Already \$2,500,000 has been voted to purchase and improve water front property acquired by this method. It is estimated that \$25,000,000 will eventually be expended. The water front terminal propwithin the limits of the city of Portland extends 16 miles. Of this. 29 per cent is owned by railroads and the city owns 21/2 per cent; the bal-ance is private ownership. Fifteen miles of additional water frontage extends from the city's lower limit to the mouth of the Wilamette River. About 3 per cent of this is owned by railroads and the balance in private ownership.

Scattle Harbor.

Scattle claims to have one of the freest ports in the world. The present slove line of the harhor is 12 miles. This is soon to be greatly increased by improvements in Duwanish they at an expense of \$1,399,000. A ship canal from Puget Sound to Lake Washington, via Lake Union, is nearing completion, this canal to cost \$2,5000. It will greatly enlarge Sattle dock frontage and afford freshwater unchorage.

Of the 43 piers in S-attle, 20 are owned by the railroads of the remaining 21, 3 are owned by the Port of Seattle Commission, 1 by the city, and 17 by individuals. The Lake Washington development will afford a large additional frontage to be controlled by the municipality.

Tacoma.

Water termlinais in Tacoma are owned practically by raviroad companies, although the city operates a system of municipal docks for handling both freight and passenger steamers. The city owns 2,500 feet of water front in the inner waterway, on 1,000 of which municipal docks are now height constructed. In addition to the frontage on the inner waterways, the city controls, under a long lease from the State, 14 acres of deep water front-age for ocean terminal purposes, which is being made ready for quick development of necessary.

Conclusion.

From this brief review of conditions on the Pacific coast it can be seen that, with characteristic western energy and enterprise, we are preparing for that long-looked for day when the Panama Canal will be opened. With a determination that is worthy of emulation the people of those cities on the western border of the continent, which enjoy such splendid harbor advantages are fighting to regain control of terminal facilities of incalculable value which corporations and private individuals in too many instances have acquired and while it is realized that all the mistakes of the past cannot be rectified in a day, it is noth gratifying and encouraging that I have been able to record that most substantial progress is being made along the right lines. It is a great fight, and I am certain that I voice the unanimous sentiment of the assembled delegates when I declare that all our sympathles are with these localities which are engaged in this mighty struggle-a struggle waged not alone on hehalf of the people of today, but of equal concern to the generations of the future.

RECORDER REPORTS BIG PROFIT FOR YEAR 1913.

Recorder Edimond Goldhaux enjoyed a brisk business during the last year, according to the annual report filed with Mayor Rolph. A cotal of 50226 documents were filed during 1913. More deeds were recorded than any other document, the total being 12-921. There were 5,941 marriage certificates and licenses placed on rec11. The fees for the year amounted to \$81,016.50, to which \$625 is added for desk rentals, making the total receipts \$81,641.50, against an expense for the department of \$98,805.84, leaving a surplus to the credit of the office of \$1,3235.36.

BUILDINGS ON EXPOSITION GROUNDS.

The following list of buildings let and to be let, gives a comprehensive idea of what has been accomplished in the building of the Exposition, and what still remains to be done. The figures as given here were compiled by Harris D. Connick, Director of Works, Panama-Pacific International Exposition:

MULGER'S REPORT SHOWS IN-

CREASE IN TONNAGE.

Sun Francisco Leads Group of Six Districts Treated.

Supervising Inspector of Steam Vessels John K. Bulger has compiled some interesting figures showing the increase in tonnages of steam vessels inspected by his department in years passed.

These figures are gross tons and for comparison are for one year in ten-year periods—for fiscal years ended June 30, 1893, 1903 and 1913. They do not include foreign freight steamers nor salling vessels.

The districts of Juneau, Honolulu and St. Michael have been created during the next fifteen years.

Firms desiring news on special classes at buildings, such as Banks, Churches, Schools, Rietels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are ngain repented under "LOCALATIES" in the last part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house, 7 story and base, reinfamed concrete, \$82,000. Architect, J. C. Hladik, Mo-nadnock Bidg. S. F. Owner's name withheld. The building will be erected at the corner of Pine and Powell streets, and has been designed to contain 100 rooms, which will be arranged in 42 apartments. Interior finish will be of pine and hardwood with oak floors in the principal rooms Plans provide for steam heat, elevator service, a vacuum cleaning plant and hot water supply. Bath rooms will have tile wainscot and composition floors. All suites will be equipped with wall beds. Entrance will be finished in marble and tile. Exterior of the building has been designed in English Gothic style, and will be faced with cement plaster. Plans are complete and figures will be called for shortly.

OAKLAND, CAL-Apartment house, 3 story and base, frame, \$13,000. chitect, C. H. Miller, Dalziel Eldg., Oakland, Owners, The Midgley Company, Lulziel Eldg., Oakland. The building will be erected on the east side of Staten avenue, north of Grand, and has leen designed to contain a number of two and three room suites with private baths and wall beds. Interior finish will be of pine, redwood and hardwood panels Dak floors will be used in the principal rooms. Plans provide for steam heat, a vacuum cleaning system and hot water supply. Bath rooms will have composition floors and tile warnscot Entrance will be finished in marble and tile Exterior of the building will be faced with cement plaster on metal lath. Plans are complete and in the hands of the owners who will do the work by Day Labor. materials are now being purchased

BERKELEY, ALAMEDA CO., CAL-Apartment house, 5 story and base, brick and steel, \$80,000. Architect, W. H Ratcliff, Jr., First National Bank Bldg., Berkeley. Owners Elston and Clark The building will be erected at the corner of Telegraph avenue and Durant, covering a large ground area. Interior will be arranged for suites of two and three rooms with bath and wall heds. Interior finish will be of pine and hardwood vereer with oak floors in the halls and living rooms. Plans provide for steam heat, elevator vacuum eleaning system and hot water supply. Bath rooms will have composition floors and tile wainscot. Marble and tile will be used in the entrance Exterior of the building will be faced with pressed brick trimmed with terra cot's. Plans are complete and the architect is taking segregated figures on all parts of the work.

FILENO FRENO CO. CALE-Apartment house and offices, 2 story and base. Clars A construction, \$55,000. Architect. R. F. Felchlin, Freno, Owner, Mrs. C. B. Sbaver. The building will be erected at the southwest corner of J and Merced streets, covering

an area of 100x150 feet Construction will be of steel and reinforced concrete with concrete floors and walls Interior partitions will be of hollow tile and metal lath and plaster. first floor will be arranged for stores and offices, and the second floor for modern apartment suites. Interior finish will be of pine with hardwood ficors. Plans provide for steam heat, a modern oil burning plant and vacuum cleaning. Bath rooms will have composition floors and tile wainscot Exterior of the building will be faced with cement plaster. Patent store fronts are specified. Plans are complete and the work will be done by Day Labor.

VENICE, LOS ANGELES CO., CAL-Apartment house, 3 story and base, brick Cost not stated. Architect, G. Lindley, Hollingsworth
A. Owner, C L Smart. The Arthur Eldg., L. A. structure will be erected on Billows avenue, and has been designed to contain about 60 rooms, which will be arranged in two and three room suites. all with private bath and wall beds Interior finish will be of nine and redwood with some oak floors. Plans provide for steam heat, vacuum cleaning system, and metal lath and plaster partitions. Bath rooms will have tile wainscot and composition floors. Entrance will be tinished in marble. Exterior of the building will be faced with pressed brick. Plans are being prepared.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$30,000. Architect, Henry C Smith, Humboldt Bank Bldg., S F Owner's name withheld. The building will be erected at the corner of Pine and Stockton streets and will be arranged for six suites of six and seven rooms. Interiors will he finished in pine and hardwood with oak floors in the principal rooms. There will be steam heat, automatic elevator, a vacuum cleening system and hot water supply. Bath rooms will have tile floors and wainscot Entrance will be finished in marble and tile. Exterior of the building will be covered with cement plaster on metal lath. Plans are being prepared and figures will be called for shortly.

SAN FRANCISCO-Apartment house 7 story and base, steel and reinforced corcrete, \$120,000. Architect, T. Pat-terson Ross, 310 California street, S. Owners, Greenwich Street Apartment Co. The building will have complete steel frame, reinforced concrete walls and floors. Interior partitions will be of hollow tile and metal lath and plaster. The building has been designed to contain large suites of six and seven rooms, and will cover a ground area of 70 by 100 feet. Interiors will be handsomely finished in pine and hardwood. Oak floors will be used in the halls and principal rooms. Plans provide for steam heat, elevator equipment and an oil burning plant There will be a vacuum cleaning system and hot water plant. Bath rooms will have tile floors and wainscot. Entrance will be finished in marble. Exterior of the building will be faced with white cement plaster. Plans for the steel work are now out for figures. Bids will shortly be called for on other narts of the work

SAN FRANCISCO-Apartment house, 3 story and base, frame \$13,000 Arthiteet. Charles J. Ronssean, 46 Kearny street, S. F. Owner's name withheld. The building will be erected on the east side of 9th street, between Harrison and Bryant streets, covering an area of 25 by 100 feet. There will he one store on the first floor besides the entrance Upper floors will contain ten suites of two and three rooms with private baths. Interior finish will be of pine and redwood with some elm panels. Bath rooms will have composition floors and tile wainscot Plans provide for steam heat and a hot Water system. Exterior of the huilding will be covered with cement plaster on metal lath and brick veneer. Plans are complete and figures are now being taken.

SAN FRANCISCO-Apartment house, 2 story and base, frame, \$10,000. Architect, C. O. Clausen, Phelan Bldg , S. F Owner, Mr. McGowan. The building will be erected on Market street near 19th, and will contain a store on the first floor and four suites of three rooms each on the upper floor. Interior finish will be of pine throughout. All apartments will have wall beds and private baths. Bath rooms will he finished in tile and will have composition floors. Entrance will be finished in marble and tile. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and contracts will be signed at once.

PASADENA, LOS ANGELES CO, CAL—Apartment 1 story and base, frame \$4,000. Architects, Euchanan & Brockway, Pasadena. Owner, Mrs. S. A Menning. The building has been designed for a bungalow apartment, the exterior heing covered with shakes and timber. Interior finish will be of pine and redwood with some oak floors. An ashestos roof will be used. Plans include modern plumbing, beating and electric work. Plans ar-complete and figures were opened on January 10th.

SAN FRANCISCO-Apartment house, 3 story and base, Class C construction. Cost not stated. Architect, C. O. Clausen, Phelan Bldg., S. F. Owners, Soloman and Gossiliner The building will be erected on a 20-foot lot on Powell street near Washington, and will have a depth of 70 feet. Interior has been arranged for five apartments of two and three rooms. Interior finish will be of pine and elm. Oak floors will be used in the living rooms and halls. There will be steam heat and a hot water system Bath rooms will have composition floors and tile wainscot. All apartments will be equipped with wall beds. Entrance will be finished in tile and marble. Exterior of the building will be faced with cement plaster Plans are complete and figures will be called for shortly.

LOS ANGELES, CAL.— Apartment house, 3 story and base. Class C construction, Cost not stated. Architect, Thomas Preston, Higgins Bldg., L. A. Owner, Mrs. Ellis The building will be erected on West 29th street near Magnolia avenue, covering an area of 49 by 64 feet. There will be a total of fifteen suites of two and three rooms.

All apartments will have private baths and wall beds interior finish will be of pine with oak floors. Plans provide for steam heat, a hot water system and metal window sush and frames. Bath rooms will be inished in the Exterior of the building will be faced with blue pressed brick. Plans are being prepared.

LOS ANGELES, CAL, - Apartment house, 2 story and base, brick Cost not stated. Architect, Louis de P. Millar, St. Louis Bldg., L. A. Owner's name withheld. The building will be erected on Fair Oaks avenue, covering an area of 30 by 178 feet. There will be seven stores and a garage or the ground floor. The second floor will contain two three-room apartments and twenty single room; Eight haths will be installed. Interior finish will be of pine and oak. Cement and pine floors will be used. There will be four disappearing beds. Exterior of the building will be faced with pressed brick. Plans are being prepared

BANKS.

REDONDO BEACH, LOS ANGELES CO., CAL.-Bank, 2 story and base. Class A construction, \$25,000, Architect, L. B. Pemberton Auditorium Bldg., L. A. Owners. Farmers and Merchants National Bank of Redondo Beach. Construction will be of the reinforced concrete type with reinforced concrete floors and walls. In. terior partitions will be of metal lath and plaster. The entire first floor will be occupied by the bank and will be finished in hardwood, marble, tile and ornamental plaster. Upper floor will be subdivided into ten modern offices finished in birch. Plans provide for steam heat, a vacuum cleaning system and metal window sash and frames. There will be safe deposit vaults and coin vaults. Exterior of the building will be faced with terra cotta brick. Plans bave been revised and new figures are now being taken.

BASE BALL PARK,

SAN FRANCISCO - Grand stands. bleachers, etc., \$50,000 Architect. Walter J. Mathews, 927 Broadway, Oakland. Owners, Recreation Park Association. Plans for one of the finest haseball parks in the west are complete and work has been started on the grading and concrete work. The park will be located on Musonic avenue and St. Rose street. Bids are now telng taken on the carpentry work, which includes over 1,000,000 feet of lumber. The grading and concrete work is being done by the Sunset Construction Co., Lick Bldg., S. F.

BRIDGES AND DAMS.

SAN DIEGO, CAL—Bridge, reinforced concrete construction. Cost not stated. Engineer, City Engineer W. M. Rumsey, San Diego, Owners, City of San Diego. Plans for a bridge over University avenue are now complete and have received the approval of the City Council. Bids will be called for at once. The structure is to have a span of 66 feet with a 20-foot driveway and a 4-foot walk. There will be two retaining walls, also of reinforced concrete, each 30 feet high. Some ornamental iron will be used. Full parmamental iron will be used. Full parmamental iron will be used. Full parmamental iron will be used.

ticulars can be secured from the City

Engineer

SAN BENITO RIVER, SAN BENITO CO., CAL-Bridge, steel and concrete Cost not stated. Engineer, County Cost not stated. Engineer, County Surveyor A. M. McCrry, Hollister, Owners, San Benito County. Plans are being prepared for a new bridge to be eracted over the San Benito River north of San Juan, and figures will shortly be called for an its construction The County Surveyors of San Benito and Santa Clara Counties are working over detail drawings for a new steel and concrete bridge to be erected over the Paririo River. pense of this construction will be assessed against the two counties equally. Construction will probably be started within a few months. Further mention will be made of the work.

MODESTO, STANISLAUS CO., CAL. -Dam, earth and concrete, \$2,000,000, Engineer, Turlock Irrigation District Modesto. Owners, Turlock Irrigation Preliminary plans for Dam District. No. 2, which is to be erected by the Turlock brigation District on the Trolumne River several miles above La Grange have been filed at Sacramento. The proposed dam will be 283 feet high, itn an upper width of 300 feet. Modesto may join with Turlock in the construction. Further mention will be made of the work.

GOLD BEACH, ODES—Bridge, reinforced concrete, \$525,500. Bagineer, none. Owners, Curry County, Blids will be received by the County Circ Ground of Curry County for the construction and designing of a reinforced concrete arched spin bridge, which is to be erected over the Cheteo River about one mile from its mouth. The design and manner of its construction is let to the bidder. More than one plan for the design may be submitted if desired. Further particulars can be secured by addressing J. M. Caughell, County Surveyor, Gold Each.

Contracts Awarded.

RICHMOND, CONTIKA COSTA CO., CAL.—Tunnell and road work, \$232,-684.16. Engineers, Havland & Tibbetts, Alaska Commercial Bidgs, S. F. Owners, City of Richmend. Contractors, Shattuck-Edinger Co., 268 Market street, S. F. Contract price, \$232,884.16. A complete list of the bids received for this wark will be found under the heading of Marin, Contra Costa and Sonoma Counties in this issue.

LOS ANGELES HARBOR, LOS AN-GELOS CO., "AL—Duck sõred, strurtural steel, \$8.3.67. Engineer, City Engineer, Los Angeles, Owners, City of Los Angeles, Contractors, The Llewellyn Iron Works, I. A. Contract price, \$8.3.97. Other Egures received were as follows: Union Iron Works 88.7.45; Willis B. Kyle \$8.8.900; Security Construction Co., \$81.8.15; Peter Conley Manufacturing Co., \$10.000.

TILLAMOOK, ORE. — Jetty work, stone and concrete, \$629,000. Englineer, United States Engineer Mojor Jay J. Morrow. Owners, United States Government. Contractors Gueblsch & Joplin, Portland. Contract price not stated.

FACTORIES & WAREHOUSES

SAN FRANCISCO-Warehouse addition, 6 story and hase, reinforced concrete. Cost not stated. Architect, G.

A Applegarth, Call Bldg. S. F. Ownct. Martin Bekins. A contract has been let to the Daniel CDay Co for the grading and bulkheading for a sixstory addition to the Bekins Van and Storage Co.'s building on Otis street north of Duboce. The structure will cover an area of 70 by 100 feet and will be fireproof throughout. Interior has been arranged for a number of small compartments besides larger storage lofts. There will be forced concrete floors, walts and roof slabs. Interior partitions will be of bollow tile and metal lath and plaster, Plans provide for freight elevators and metal window sash and frames fireproof doors. Exterior of the building will be faced with cement plaster. Plans are now out for figures.

SAN FRANCISCO-Laundry, 2 story and base, reinforced concrete, \$10,000, Architects, Fabre & Bearwald, Merchants National Bank Blug . S F. Owner, Mr. Betcabe The building will be erected on the south side of street west of Hyde. The first floor will contain the launday and upper theor will be subdivided into a number of rooms which will be occupied by the employees. Interior finish will be of pine throughout. GOVERNMENT WORK AND SUPPLIES

The Transisthmian Duct Line.

The study of the engineering features covering the transistimizand duct. Canal Zone, has now been completed, and it has been decided to lay a 4-way virtified elay duct line from colon to Balboa to contain the signal cable and the telephone-telegraph sable. One duct is available for lease or rental and the other spare duct is left for future requirements.

The duct will follow the line of the Panama Railroad. It will be laid on a base of concrete approximately five inches thick and encased with three inches of concrete on the top and sides.

Manholes will be located according to the theoretical spacing of loading to the theoretical spacing of loading points, which places the manholes every 74 feet. They are to be of the concealed type, and each composed of only three different pieces. The pieces will all be cast at one central point and distributed along the right of way. The light weight of the parts and the flat shape of the individual pieces will allow a knock-down shipment to be handled easily and with a minimum of breakage.

The signal cable will consist of approximately 215,000 feet of 13 solid conductor and 50,000 feet of 9 solid conducton No. 12, Brown and Sharpe

The telephone-telegraph cuble will consist of 257,730 feet, 38 pairs of 19gage solid conductors, quaded, and 12 pairs of 16-gage solid conductors in pairs. This will offer an increase over the present telephone trunk lines of approximately 30 circuits.

Armored cable will be installed at bridges Nos. 140 and 300, crossing the Gatun and Chagres Rivers.

Specifications and requisitions covering the 4-way multiple duct, the cables, loading coils, and other adjuncts were completed by the telephone and signal department of the Panama Rolfroad on November 1. Work will be started as soon as the duct arrives on the 18thous. Duct will be laid at the rate of 1,500 feet per day.

New Heclomation Work,

In order to increase the water supply for the Okanogan registion project, Wash., the Secretary of the Interior has approved the recommendation of the boaard of reclamation commissloners that plans be made immediately for the development of power to pump water to about 1,050 acres Power will be developed at two drops in the main canal. The sum of \$82,-000 has been allotted from the reclamation fund for the work. This plan will reduce the acreage to be served from the Salmon River about 11 per cent. In ordinary years it will permit the holding of 2,000 to 3,000 acre feet in the reservoirs as a reserve for years of drouth in addition to the reserve afforded by the original project and by increase in Salmon Lake ca-

Induction Motors.

The following bids were opened at the office of the Reclamation Service. Los Angeles, Cal. for furnishing under advertisement No. 261, 7 2-H. P. Induction motors: General Electric Co., Los Angeles, Cal., \$180, at San Francisco or Portland; 2 days

Westinghouse Electric and Mfg. Co., Los Angeles, Cal. \$189, at East Pittsburgh, or \$199.35, at Sin Francisco.

Repairs to Vrmy Buildings.

The military authorities have completed the plans for the expenditure of \$812,000 during the next fiscal year for repairs to public but lings at miliposts. Of this amount \$725,000 will be required to repair approximately 9,650 buildings, the value of which is placed at \$5,000,000. It is estimated that at least fifty per cent of these buildings are old frame structures twenty years old or more and the expenditures necessary to keep them in repair will necessarily be much greater than for the recently constructed buildings. It is estimated that an expenditure of about 1 per cent on the modern buildings of about \$265,000 will be sufficient to keep them in good state of repair, leaving \$460,-000 available for repairing the older buildings which represents appreximately 1.7 per cent of their estimated value It is believed that \$87,000 would be required for additions and alterations. Most of that sum will be required at Fort Sill for remodeling officers' quarters and barracks and for improving the conditions and stables to provide for the increased size of the Carrison

SAN JOSE AND THE SANTA CLARA VALLEY

BRIDGE-Steel and concrete. Cost not stated. San Benito River, San Benito Co., Cal. Engineer, County Survevor A M. McCray, Hollister, Owners San Benito County. Plans are being prepared for a new bridge to be erected over the San Benito Biver north of San Juan, and figures will shortly be called for its construction. The County Surveyors of San Benito and Santa Clara Counties are working over detail drawings for a new steel and concrete bridge to be erected over the Pajaro River. Expense of this construction will be assessed against the two counties equally. Construction will probably be started within a few months. Further mention will be made of the work.

MASTER PLASTERERS APPEAL TO MAYOR ROLPH TO SETTLE STRIKE.

At the regular meeting of the Master Plasterers' Association held Tuesday afternoon at the Builblers' Exchange, the the up of work in the city as a result of the dispute between the journeymen plasterers and corpenters was considered and the following resolutions adouted:

San Francisco, Cal., Jan. 6th, 1914. To Honorable James Rolph Jr.,

Mayor of the City and County of San Francisco, California:

WHEREAS, the dispute between the universe men carpenters in the matter of the erection of exterior staff work on the Exposition buildings has spread throughout the entire city and has therefore become so acute that the business interests of all the people are leing seriously injured, and

WHEREAS, According to the records of the records of the recent convention of the Building Trades Department of the American Federation of Labor held in Seattle on Navember 28th, 1913, the whole question has been settled by making permanent the temporary agreement under which the two crafts had been working pending the regular convention of the A. F. of L., the provisions of which temporary agreement were that each craft should furnish half of the men on said exterior staff work, and

WHEREAS, P. H. McCarthy, representing the interests of the carpenters, appeared as a delegate at said convention and attempted to have all of the erection of this exterior staff work-twarded to the carpenters, and

WHEREAS, After a thorough allscussion of the subject, during which discussion the said P. H. McCarthy was fully heard in his attempt to convinctio delegates from the other crafts that his contention was just, a decisive res-

nintion was adopted by the Building Trades Department of the A. F. of L. by the substantial vote of 31 in the affirmative to 20 in the negative as follows: "Be it resolved, that the agreement existing between the Operative Plasteer's and the Brotherhood of Carpenters in relation to the erection of exterior staff on the Panama-Pacific Exposition, which is now in contention, he extended during the life of said operation," and

WHEREAS, It being plain that the dispute had been settled by the highest authority in labor circles under the American method of the majority rule and should under the terms of the Constitution of the A. F. of L. be observed by all parties concerned, therefore

BE IT RESOLVED, That the Master Plasterers' Association, it regular session assembled at the Builders' Exchange this Sixth day of January, 1914, respectfully appeal to His Honor, Mayor James Rolpi, Jr., and urge him to take a hand in this unfair dispute and use his influence to induce P. H. WcCarthy, and all the interests allied with him, to abide by the decision of the A. F. of L and thereby release the embargo that is unnecessarily cripping the business Interests of Servancisco.

Respectfully submitted.

A. LEAF,
J. J. CONNOLLY,
PETER BRADLEY,
Committee.

ARIZONA METAL MINE PRODUCTION

Record Output in 1913. tnorenses in Gold, Silver, Copper, Lend and Zinc.

In 1912 there was a record mine production of gold, silver, copper, lead, and zinc in Arizona, according to pre-liminary figures of V. C. Helkes, of the United States Geological Survey. The total value of the mine output was about \$71.000,000, an increase of nearly 6 per cent over the value of 1912, which was \$67.050,784. The copper output was valued at nearly \$64.000,000; the silver at more than \$2,263.000; the sliver at

mon, and the zinc at \$310,000. The mine yield of gold in Arizona in 1913 was more than 191,000 ounces, an increase of 5 per cent over the output of 1912, which was .81,99,891 fine ounces. Of this total, yer 42 per cent was taken from siliceous ores and most of the remainder came from copper over, which are undoubledly the source of the increased gold 3-tput in 1912. The three largest producing gold mines were the Tom Reed, Gold Roads, and Valture. The Tom Reed output was about the same as in 1912, the Gold Roads had a slight increase, and the Valture a substantial increase. In Yuna County operations were resumed at the La Fortuna mine.

at the La Fortuna mue. The mine production of silver increased about 8 per cent amounting to more than 3.753,000 ounces, against 3.193,37 ounces in 1912. Most of the silver was derived from copper ore, but in 1913 the increase is due largely to shipments of lead ore end concentrates from Cochise and Mohave counties. Much silver also comes from siliceous ore. Ahout 500 tons of ore month was shipped from the Tombstone property and a large tonage of the dealers of the silver was taken from the dealers.

the Commonwelath dum .1 350-ton eyanide mill at this property was completed during the year

With a mine produ-414 593,000 pounds of couper in 1913. Arizona led all other copy or producing States. The output in old shows an increase of more than 49,000,000 pounds, or about 12 per cent over that of 1912, which was 365 CN 649 pounds As the price of copper was slightly lower in 1913, the value of the metal increased only about \$1 00 000. There were 11 active copper -melting plants in the State, and one and concentrate were also sent to 6 copper and lead plants in other States. Of the former the greatest increases in output were made at the Hayden, Columet & Ari-Capper Queen, old Dominion, zona, Consolidated Arizona, and Swansea plants. At the United Verde and Detruit plants there was little change from the figures of 1912. Those making less copper were the Shannon, Arizona Copper, and Pioneer plants. plants were completed by the Arizona Copper and Calumet & Arizona componies, and another was in course of construction for United Verde ores. The disseminated copper mines in Gila, Pinal, and Greenlee counties yielded approximately 145,500,000 pounds of copper. Included in this estimate of copper picduced are the outputs of the Miami, Ray, Arizona Copper, and Detroit mines. The Miami product did not greatly exceed that of 1912. The 3,006-ton concentration plant was active and the product went mostly to Cananea, Mexico The International Smelting & Refining Co. will build a copper plant at Miami to treat this ore and that from the Inspiration mine. Test plants using the flotation process were operated at the Miami and Inspiration, as the saving by concentration alone is not sufficient The Ray Consolidated Copper Co. greatly increased its output, from nearly \$6,000,000 pounds of copper in 1912 to about 52,000,000 tounds in 1913. treating 6000 tons of ore per day. Production from Yuma and Fima counties was not what it could have been, since tile Swansea and Pionesy plants were operated only a tew months. At Globe greatly increased shipments were made from the Superior & Boston, Iron Cap, and Black Warrior mines, and in Pinal County from the Magma mine

With an increase of more than 104 per cent, the mine production of lead was larger than in any other year. The total output was rearly 14,000,000 pounds, valued at about \$612,000, as against 6,806,440 pounds, valued at \$306,290 in 1912. The mines at Bisbee produced much lead ore, and in 1913 there was a large increase. The Shattuck mine Lecame a regular producer of, silver-lead one as well as copper ore In Molare County an increased tonnage was shipped regularly from the Tennessee mine to the concentration plant at Needles, Caufornia.

The mine production of recoverable spelter was about 9,100,000 pounds. valued at \$510,000, which was an increase of about 340,000 pounds, nearly 4 per cent, over the production of 1912. On account of the lower price paid for the metal, the total value decreased more than \$90,000. The Golconda mine, in Mohave County, formerly the largest producer, was making shipmouts of zinc ore and concentrates only part of the year, and therefore had a greatly decreased output Much are was, however, shipped from the San Xivier mine to Pima County and much concentrate was made from Mohave County ores mided at Needles

ELECTRIC BAILWAY BUILT IN 1913.

The new track built and placed in service during 1913 by city systems, intermoun lines and the triffed steam railroads is tabulated in the accompanying list. The statistics were coin piled from reports received from the railway companies then selves, and the record is complete execut in the case of a few of the smaller properties whose replies were not received in time for inclusion in the list. All items wolch appear are, of coorse, accurate, and the omitted mileage, if it exists is negligible, the reports some checked from the items appearing during the year in the construction news columns of the Electric Railway Journal

The following summary shows the electric railway mileage built or put into operation each year since 1907 in the United States and Canada:

1	1	1	1	7											1	550	miles
3		ı	ı	8											3	258.5	miles
1	5	ì	þ	9												887.1	miles
1	į	ŀ]	ú									,		1	397.2	miles
]		1	1	1											ţ	191.5	miles
÷	1	ì	1	2												950.2	miles
}	:	ì)	ö											1	071.9	miles

Texas heads the list of states with 17777 miles reported. This total in-Indes the longest interurban railway built in the United States during 1913 namely, the Southern Traction Com-pary which built 154 nodes of track connecting Waco, Dallas and Corsicana, Texas.

Missouri is second with 7152 miles of track constructed. The largest part of this mileage is represented by the Kansas City, Clay County and St. Joseph Rollway

Pennsylvania with 55.79 miles. third, of which the Philadelphia Rapid Transit Compony built 21.58 miles. The Hersbey Transit Company completed a ten-mile line.

In Minnesota, which has a total of 54.12 miles, the Electric Short Line Railway and the Minneapolis, St. Paul, Roclester and Dubuque Electric Traction Company built twenty-five and eighteen miles of track, respectively Two long extensions were built in Iowa In Massachusetts the majority of new track is credited to the Berkshire Street Railway The electric railways of Canada built 147.86 miles of track, compared with 78.27 or an increase of 47 per cent over the previous year -Flectric Railway Journal

SACRAMENTO VALLEY DEVELOP-MENT PLANS

According to the programme mapped out for the years of 1914 and 1915; the Sacramento Valley Development Association, under the management of Edword H Brown, will pursue the work of promoting the interests of the district it represents with unusually keen

The association proposes to assist all City or County Chambers of Commerce within its district; to encourage participation in state and county fairs and land shows and in new enterprises of meritorious nature and to discourage mojects found wanting in merit. Intitlesting tourists in the Sacraniento valley territory is to be one of the ref aims of the Development Association, which is planning a number of excursions through the valley for 1915 Exposition visitors.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and bear of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project. but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Colarrh and Cold in the Head. It makes you miterable, doesn't
it? You really don't care whether things go right or not
and you wooder when you'll ever get over it. And you will not get
over it until you get the Clover Leaf Gatarrh Remedy, and use it.
It will relieve you, and you'll wonder why you had not used it
sooner. We are so positive that this will relieve you of your Cotarrh or Cold in the Head, that we guarantee you satisfaction or we
will refund your money.

As a carpenter and builder. Mr. Neidick has had twenty-two years of experience, during which time he has mastered the bus ness in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were recreted in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

Building statistics for the month of December, 1913, showed a decline as compared with the same month last year. This was not such a material decline as could be experted under the combitions of business generally. out of 83 cities, reporting to Constructiin News, New York, the total loss as compared to last year amounted to only 10 per cent. One fict is noticeable in the tabulation of figures and that is that the small cities have gone ahead much faster than the larger centers. Perhaps the high cost of living has given the farmer a better price for his products and thus the smaller communities have benefited in the productive districts. Comparative figures are

Statements as to business done by the port of San Francisco show that exports for the year, 1913, amounted to \$68,937,862, as against \$35,773,746 for 1910, showing an increase of almost linerensed from 50,669,435 in 1910 to \$62,650,298 in 1913. Shipments to outlying possessions for the year 1913 were as follows:

To Alaska \$ 3,161,273 Hawaii 19,394,091 Tutnilla 167,071 While these figures show a large

While these figures show a large business to have been done by this part exclusive of domestic trade and coastwise shipping, it should increase much more rapidly in the immediately succeeding years. The port of San Prioricse is the great port of the Pacific Coast and the records from now on will show it.

71,305

Government Policy In Alaska.

REPORT OF THE SECRETARY OF THE INTERIOR.

As Alaska contains the ornest supply of government lands cod mineral resources, the question of low hest to decelon and conserve these resources has been and still is one of paramount importance to this country. Franklin K Lim Secretary of the Interno has made its report to the President. So much of the report as relates to Alaska is herewith appended.

December 10, 1913.

Sir: There are many matters of home ceneern as to which it is my pleasure to report to you, but I would give prominence to that which appeals to me as of largest and most immediate moment—the fuller and freer uses of our national resources.

It is, of course, known to you that there exists a feeling in the West that its affairs and needs nove not been given that consideration at the hands of the National Government which they ment. This feeling is not confixed to speculators or exploiters. It is the sentiment of many who are without selfish motive and regard the matter wholly from the standpoint of national growth. They point to the conditions which obtain in Alaska as unparalleled among people of our aggressive and nation-building stock. So too they are unable to understand why ways have not been found by which the great bodies of coal and oil lands, of phosphate and potash lands, may be diveloped, and the waters of the mountains made available for the generation of power and the redemption of the desert

There is one very simple explanation for the existence of this feeling. We have alventuced upon a new policy of administering our affairs and have not developed adequate machinery. We have called a halt on methods n f speliation which existed, to the great benefit of many, but we have falled to substitute methods, sane heilthful and progressive, by which the normal enterprise of an ambitious people can make full use of their own resources We abruptly closed opportunities to the menopolist, but did not open them to the developer.

Land Policy.

I have said that we had not into force a new land policy, which caused dismay and discontent Let me explain what I mean by this lit was, in fact, but a new application of on old nolicy. Congress has always most generous as to the disposition of the national lands One cannot read our land laws without being struck with the fixed determination which they snow that it was wisest to be quit of our lands as quickly as possible might almost be said toot the Government regarded its lands as a hurden rather than an asset. We have given generously to our radionals and to the States. There was land for all, and it was the Government's gl d function to distribute it and let those profit who could. There was no thought then of creating tumber barons or cattle kings, or of coal monopoly. The sooner the land got into hands other than those of the Government the better this generous donor was not so petty as to discriminate betweel kinds of lands, the uses to which they could be put, or the purposes which those might have who got them. Land is land save when it contains minerals: this was roughly the broad painciple adopt-To classify was a task too diffi-The lands cult or not worth while would classify themselves when they arrived in individual ownership And so the door was opened for monopoly and for fraud.

If the Government did not appreciate the invaluable nature of its assets there were men who did. Great fortunes were bild in the vast holdings of what tol but a short time since been the property of the people There was danger that the many still to pour into the West would by necessity become the servitors of a fortunate and early few on this discovery our indifference at once took flight. And so out of the abuse of the Nation's generosity there came a reaction against a policy that was so liberal as to be dangerous.

The Nation wanted home makers but found its lands drifting into the bands of corporations which were withdrawing them from the market awaiting a time when bands would be more scarce, it gave opportunity for many competing coal operators and iron manufacturers. but found the sources of raw material centering into a few large holdings; it wished its lands to be cleared of forests to make way for forms, but it found hundreds of consecutive miles reserved from use by the flat of those who appreciated their worth, and many more miles of watershed despoiled of its needed covering in places where homes were not

A reaction was mevitable If lands were to le withdrawn from public service why might not the Government do the withdrawing itself? The old philosophy that "land is land" was evidently unfitted to a country where land is sometimes timber and sometimes coal, indeed, whore land may mean water-water for tens of thouands of needy neighboring acres. For the lands of the West differ as men do. in character and condition and degree of usefulness. We had not recognized this fact when we said "land is land" Lands fitted for dry firming and lands that must forever lie unused without imigation; lands that are worthless save for their timber, lands that are rich in grasses and lands that are pour in grasses; lands underlain with the nonprecious minerals essential dustry or agriculture, lends that are invaluable for reservoir or dam sitesthese varieties may be multiplied, and each new variety emphisizes the fact that eigh kind of land has its own future and affords its own opportunity for contributing to the Nation's wealth

So there has slowly evolved in the public mind the conception of a new

policy-that land should be used for that nurmose to which it is best fitted. and it should be disposed of by the Government with respect to that use. To this policy I believe the West is now reconciled. The West no longer urges a return to the hazards of the band is land" policy But it does ask action. It is reconciled to the Government making all proper safeguards against monopoly and against the subversion of the spirit of all our land lins, which is in essence that all suitable lands shall go into homes, and all other lands shall be developed for that purpose which shall make them of greatest service. But it asks that the mobinery be promptly established in the law by which the lands may be used. And this demand is reasonable. Already Congress has recognized in many ways the appositeness of this policy, but it is for yourself and Congress to further extend thi thought into our legislation

Surely this is not a task that may be adventured upon with recklessness or without respect for the opinions of ot ers. And the suggestions which shall be made by me are so made in the loope that they will form a basis upon which the constructive mind may work and bring forth a more perfect, a more efficient working plan.

As to Alaska.

The largest body of unused and neglested land in the United States is Alaska. It is now nearly half a century since we nurchased this territory. and it contains today less than 40,000 white inhabitants, less than 1,000 for each year it has been in our posses-The purchase was made as a means of protection against the possittle aggression of a foreign nation and without the hope that it would be self-supporting In the intervening 46 years we have given it little more than the most casual concern. vet its nimes, tisheries, and furs alone are added to our wealth the grand sum of \$500,000 000.

For almost a generation it was the rich harvest field of a single company. Individual furtures have been made in to it country larger than the price naid to Russia for the whole territory, How its waters are we know because they have been proved, but how rich its lands are in gold and copper, coal and oil, iron and zinc go one knows. T'e pro-pector has gone far enough. however to tell us that no other section of our land today makes so rich i mineral promise And in agriculture the Government itself has demonstrated that it will produce in abundince all that can be raised in the Semidinavian countries, the bardy cetrals and vegetables, the meats and I'm herries off which 9,000,000 people live in Norway, Sweden and Finland, It has been estimated that there are 50,000,000 agres of this land that will make homes for a people as stardy as tiese of New England Whether this 1- so or not, it would appear that

Alaska can be made self-sustaining

agriculturally.

This was and unsurpassed asset lies almost undeveloped. A territory one-fifth the size of the United States contains less than a thousand miles of anything that can be called a wagon road. It has few inconsiderable stretches of railroad which terminate, with one exception, either in the wilderness or at a private industry. Only the richest of its mines can be worked, and one of its resources of greatest immediate value to the people—its coal lands—lies unworked.

The one constructive thing done by this Government on behalf of Alaska in nearly laif a century was the importation of reindeer for the benefit of the Eskimo on the border of the Arctic Ocean. For the white man we have done nothing—so little, in fact, that to mention what we have done is matter for chasprin and humiliation. I have thought that perhaps the scandals that have developed in Alaska have been in some part the result of a feding that it was No-Man's Land, where the primal instincts and powers were the only law.

This unfortunate condition cannot be explained on the ground of the inhospitality of the Alaskan climate. careful study of isothermal lines shows that some of southeastern Alaska has a climate more temperate and more equable than that of this city, while much of the greater rortion of the north has a kindler climate than Stockholm or St. Petersburg. Moreover, our people are not stayed in their quest for homes or wealth by the rigors of a long winter. The spirit and purpose which brought them from Europe to Virginia and to Massachusetts take them today to Montana and Saskatchewan. The United States lately opened to entry a tract of land in Montana for which there were 46,-000 applicants for registration, and only 7,000 of these could be given an opportunity to homesterd. There is more railroad hullding 500 miles north of the Canadian horder than there is for the same distance south of it.

Why has not this land been develoned? The frank answer is that we dld not realize until within a few years that it was worth developing. As soon as we discovered its value as a national asset we became alarmed and drew back, affrighted at the thought that we might lose it, or at least that it would become the property of those who would exploit it without respect to the public interest. Since then we have been waiting to make up our minds as to what wisely could be done. We have besitated and calted out of the very keenness of our appreciation of what Alaska might become. It has rather been in compliment to Alaska than in derogation of her value that we have done so little for her in late years. It was a new land to be opened under new conditions. The mistakes made there and here we did not wish to repeat. But now after a long pause it would seem to be the sense of the people that we shall proceed at once and in a large way to deal with the problem of Alaskan development.

Proposed Administrative Board.

We have withdrawn Alaska from the too aggressive and self-serving exploiter. What have we to substitute as a safer servant of public interest?

To this question I nave given much thought, and my conclusion is that if we are to bring Alaska into the early and full realization of her possibilities we must create a new piece of governmental machinery for the purpose. We should undertake the work in the spirit and after the method of a great corporation wishing to develop a large territory. In my judgment the way to deal with the problem of Alaskan resources is to establish a board of directors to have this work in charge. Into the hands of this board or commission I would give all the national assets in that territory, to be used primarily for her improvement-her lands, fisheries, Indians, Eskimos, seals, forests, mines, waterways, railroadsall that the nation owns, cares for, controls, or regulates. Congress should determine in broad outline the policies which this board in a liberal discretion should elahorate and administer much as is done as to the Philippines. This board would of course have nothing whatever to do the internal affairs of the with organized Territory of Alaska, for it would exercise no powers save such as Congress granted over the property of the United States in Alaska.

There are several reasons which appeal to me as supporting this sugges-

tion:

1. Such a board could advise Congress as to what should be done, without prejudice, out of a deep national interest and with first-hand knowledge of conditions.

2. Such a board would co-ordinate the present enterprises of the Government in Alaska. As it is now, the control of lands is in one department, of forests in another, or fosheries in a fourth, of railroads in still another. The care of black hear is in one department and of brown bear in another.

3. There can be no satisfactory administration of land laws nor any other laws at a distance of 5.000 miles from the point of action. Much less is this possible where the two sections of the country are separated by an ocean, and the land calling for attention is closed to the world one-half of the year. The eye that sees the need should be near the voice that gives the order.

4. Alaska's opening and improvement should be treated as one problem. Each step in such an administration should be part of a plan, not an isolated act. We should have a united and consecutive program, based on immediate knowledge governing this work. Each line of activity within the Territory should be correlated with all other activities. The onening of lands and the building of railroads or wagon roads, for instance, should be part of one scheme.

5. Alaska should he developed so far as possible out of her own revenues and resources. She should have a Federal hudget of her own. Her revenues and expenditures chould he presented to Congress on a single sheet. The funds raised from her lands and fisheries, her furs, her forests, and her mines should he used for the construction of her roads, railroads, teleraph and telephone lines, or for any other purpose which would make her the world. I helieve it could be shown

that Alaska is self-supporting today, or, what is more to the point, that by proper taxes and charges imposed upon those who are deriving large return from their enterprise in the Territory, such revenue could be derived as would support a large policy of expansion and improvement. In short, I would construct the administrative machinery that would most surely lead to a prompt and continuous development of Alaska as a part of the United States upon a plane commensurate with her possibilities industrially, agriculturally, and socially.

The members of such a board appointed by the President would be selected presumably with reference to their fitness for the work to be done. Each one could be made the administrative and residentlary head of a department or division, so that there might be a commissioner of the Alaskan land office, another commissioner of highways, another, perhaps, commissioner of Indian affairs and fisheries, and so on. All would sit together, as in the commission form of municipal government, and would work for a common end, the upbuilding of Alaska as an integral and contributing part of the Union.

I apprehend the fear that with such a commission there would be danger of corruption or indifference creeping This, however, is ininto its work cident to the bestowal of all authority. The commission would not go unchecked, of course, for it must report to the head of some department at Washington, and through that head to Congress, and would be always subject to investigation. Moreover, no method has yet been invented by which dishonesty or poor judgment can be guarded against in public or in private life. In the end the character and wisdom of the men appointed is the only insurance that can be given against conduct that is foolish or worse

Alaska should not, in my judgment, he regarded as a mere storehouse of resources upon which the people of the States may draw. She has the potenialities of a State. And whatever policy may be adopted should look toward an Alaska of homes, of industries, and of an extended commerce.

Strongly as I would urge this method of management—for it offers a rare of portunity to exhibit the efficiency of a Republic—I would not have Alaska wait for needed legislation until the merits of such a plan could he passed upon by Congress. Those things which appeal to me as of immediate necessity upon which independent action may he taken are (i) the construction of railroads in the Territory and (2) the opening of her coal lands.

Alaskan Railroads.

1 have already expressed my lief to Congress that it was wise for the Government itself to undertake the construction and operation of a system of trunk-line railroads And I am led to this view Alaska. brespective of the possibility of private enterprise undertaking such work, although my belief is that no railroads would be privately constructed in Alaska for many years to come excepting as adjuncts to some private enterprise. Be that as it may, it would seem wise for the Government to undertake this task upon grounds of

state. The rates and the service of such railroads should be fixed with reference to Alaskan developmentnot with regard to immediate returns The charges fixed should be lower for years to come than would justify private investment. I would build and operate these highways in the same spirit that the counties or the States build wagon roads-not for revenue, but for the general good. After all, a railroad is little more than an operated wagon road. In many countries they still call railroad cars "wagons." Our laws as to railroads are evolved from our old laws as to carriage by wagon Our courts speak of railroads as property charged with a public interest and so justify the regulation of their rates But no court would justify the imposition of rates made for the purpose for which Alaskan rates should be creation of a commonmade-the wealth. If this is our task, it should be done whole-heartedly and with a consciousness that the dollar spent today on an Alaskan railroad will yield no more immediate return on the investment than the dollar spent on the Panama Canal.

These, then, are the persuading reasons for the helief that the Government should undertake to drive from the coast inland one or more lines of (1) The Government alrailroad: ready regards it as its duty to build wagon roads. Such roads when well built are almost as costly as the construction of a railroad, which is the essential modern means of transportation. (2) There can be no assurrance that without surrendering our resources in Alaska private railroads will be built. (3) The opening of this new country demands that the highways of travel and commerce should be made wholly subservient not to private interest but to the upbuilding of this territory that they may be the real servants of the national purpose.

If it is thought wise to recoup the Government for its original outlay it can be done, at least in part, by following a plan not unknown to our people-by giving a land subsidy to the owners of the road Retain in the Government one-half of the land on each side of the railroad until it has appreciated in value by the growth of the lands given to the public. Thus the Government would subsidize Itself and reap some of the benefits accuring to its land from the construction of the road. Judging by the increase in land values in the newly opened sections of Canada, who could say but that long before the bonds were due the Government would thus have an asset sufficient to meet the original debt?

There seems to me no necessity for barring the way to minor privately owned roads because of the presence of longer systems of publicly owned roads. The two exist together in other countries. I would not even apply the principle of the commodities clause of the act to regulate commerce to such roads. They should be built, however, under governmental supervision, capitalized and operated under the strictest regulation, and be at any time subject to purchase by the Government at their cost, minus depreciation.

Alaskan Caal

It is not necessary to set forth here the extent or character of the coal fields of Alaska Neither could I add to your knowledge or that of Congress as to the need for this coal both by the Navy and by the industries and the people of the Pacific coast generally. There are almost unlimited quantitles of a high grade of lignite in the interior which may not stand extended storage or transportation. This could be converted into electricity at the mouth of the mines and widely distributed for lighting, heat, and power Toward the southern coast of the peninsula there are two well-known fields of a high-grade bituminous coal and some anthracite. These are the fields which have given rise to the troubles with which all are familiar

These coal fields should be opened not to speculators but to operators. Those should have these lands who will use them. None should be opened as a basis for a gamble in future val-If these premises express sound public policy, there appears to me but one conclusion that can be reached as to the manner in which they may be safely turned over to the public-under a leasing and royalty system similar to that under which the State of Minnesota leases its ore lands and the States of Montana and Colorado their coal lands. The tracts opened should be disposed of to those who within a certain time would develop mines and make their product commercially available. This means that where a railroad is necessary to the operation of a mine the applicant should take a lease so conditioned for limited period. Sufficient land should he leased as a body to justify longcontinued and economical operation As the average of all operations in the United States is 2,600 acres, including many small holdings, this might be taken as a maximum unit.

There has been much dispute between those who favor making a lease for an indeterminate period, dependent alone upon continued operation, and those who believe it wisest to fix a term for the lease, 20, 30 or more years. This dispute seems to me of much more academic than practical interest There should be no disposition to change the lessee If a fixed term of lease is decided upon, original lease should have an assured preferential right to a renewal until the mine is worked out. So that in the end the fixed term is a reservation of the right on the part of the Government to make new terms at the end of a number of years, a reservation which could be fixed in an indeterminate lease.

A fixed minimum annual would conduce to operation and prevent the holding of lands out of use These are matters, however, of regulation upon which much thought should he expended, and the experience other lands will be found helpful the principle of the homestead law is adopted, and one lease only permitted to any one person or group of persons. and all leases made nontransferable, excepting with the consent of a designated authority, it would seem that monopoly could be prevented. I would, however, add one other precautionthat in each field a large body of the

coal land he reserved, so that the public and the Navy might be rendered independent of private supplies if that should become necessary.

The attraction of a leasing system is that it enables an operator to put all of his capital into the promotion of his enterprise, no investment heling needed for the purchase of the land. This makes it possible for the man of comparatively small means to become a coal mine operator. The lessee is a coal mine operator. The lessee is a coal mine operator. The lessee is a coal mine operator is deverment a preased to pay the Government a royalty in lieu of tying up a large amount of capital in the land itself.

There is this further consideration, which those interested in Alaska's future might well consider. The royalties arising from these mines (as well as from oil; would for a long time be a source of revenue to the Government. To stimulate the opening of mines, all royaly might well be waived for a brief period, later, however, these royalties would be a not inconsiderable addition to the resources available for Alaskan development, for I would think it the wisest policy to give to this new land the full return from her properties to be used in her improvement, at least for many years.

There are many isolated places in Maska where small mres may be opened to supply a local and small need. A license to mine a small acreae without any charge whatever on the part of the Government would meet this need.

BUILDING TRADES EMPLOYERS' AS-SOCIATION OF CALIFORNIA ADOPTS RESOLUTIONS RE-GARDING THE PLASTER-ING SITUATION.

At a special called meeting of the Building Trades Employers' Association of California, held or January 2pd, 1914, to consider the Plastering situation, which Body is composed of the following bodies, to wit:

The General Contractors' Ass'n.
The Concrete Contractors' Ass'n.

The San Francisco Lumbermen's Club The Master Housesmiths' Ass'n.

The Furniture & Carpet Trades Ass'n The San Francisco Planing Mill Owners' Association.

The Sheet Metal Contractors' Ass'n.
The Lighting Fixture Club of S. F.

The Lighting Fixture Club of S. F.

The Erectors' Association of California.

The Cabinet Manufacturers' Ass'n.
The Master Roofers' & Manufacturers' and Individual Firms, the following resolution was adopted:
"WHEREAS, Local Plasterers' Union

"WHEREAS, Local Plasteres' Union No 65 has demanded 50% of the labor involved in nailing up staff work on Exposition Buildings, at an increased labor cost of 50%, which work herecofore, at all previous Expositions held in the United States, has been performed by Carpenters only, and

WHEREAS, The Building Trades Council of San Francisco has awarded this work to Journeymen Carpenters only. In accordance with Carpenters only. In accordance with Carpenters only. In accordance Ballding Brides Council and the Contractors, before the Council and the Contractors, before the Countracts were awarded as result of which decision the menuers of Local Plasterers' Prion No. 65 laws walked out on all Plastering Work in San Flancisco, and

Firms desiring news on special classes of buildings, such as Banks, Churches, Schools, Hotels, etc., will find such liens sill classified and grouped under proper headings, commencing on this page. These same Hems are again repeated under "LOCALATIES" in the last part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house, 4 story and base. Class C construc-Cost not stated. Architect, Herman Barth, 12 Geary street, S. F. Owner's name withbeld. The bailding will be erected on California street near Hyde and will cover a large ground area. Plans show a total of some 40 suites arranged in two and three room apartments. Interior will be finished in pine with elm panels and oak floors. There will be steam heat, a hot weter system and vacuum cleaning. All suites will have wall beds and private bath rooms. Baths will be finished in tile and will have composition floors. Entrance and vestibule will be finished in marble and tile. Exterior of the heuse-will be faced with pressed brick and terra cotta. Preliminary plans are new being prepared. Further mention will be made of this work.

SAN FRANCISCO-Apartment house alterations, 3 story, frame, \$6,000. Architect, N. W. Sexton, Chronicle Bldg. S. F. Owner, Mrs. C. De Forest. The building on Clayton street north of Halght, now occupied by several flats, will be altered into a modern apartment house structure containing three and five room suites. There will be new interior finish, partitions, plumbelectric work and heating. apartments will be equipped with wall heds and will have private bath rooms. Interior finish will be of pine and redwood. Bath rooms will have composition floors and tile wainscot. Exterior of the building will be covered with rustic and shiplap. Plans are complete and figures are being taken.

BERKELEY, ALAMEDA CO., CAL. Apartment house, 5 story and base. Class C construction, \$50,000. Architect, Clay N. Burrell, Albany Bldg., Oakland, Owners, Cohn Bros. The building will be erected on a large corner lot in Berkeley, and has been designed for suites of two and three rcema, laterior will be finished in pire and elm panels with some hardwood floors. There will be steam heat, elevator service and vacuum cleaning Bath rooms will have composition floors and tile wainscot. Entrance will be finished in marble and tile. A11 suites will be equipped with wall beds and private bath rooms. Exterior of the building will be faced with pressed hrlck. Preliminary plans have been approved and the architect is now engaged on the working drawings.

PORTLAND, ORE-Apartment house 2 story and base, frame, \$15,000. Architects, Goodrich & Goedrich, Abington Bldg., Portland. Owner's name withheld. The building will be erected on the East Side, covering an area of 40 by 70 feet. Interior has been arranged for eleven soites of two and three rooms, besides a number of single rooms. All suites will have pri-vate baths and wall beds. Interior finish will be of pine and redwood Oak floors will be used in the living rooms. Plans provide for steam heat, a hot water system and vacuum clean-Bath rooms will have composilng.

tion floors and tile wainscot. Exterior of the building will be covered with rustic and shiplap. Work will start in the spring.

SEATTLE, WASH-Apartment house, 3 story and base, brick \$25,000. chitect, F. H. Blohme, New York Bldg Scattle. Owner, Frank Logan. The building will be erected at the southeast corner of Republican and Minor streets, and has been designed to contain fifteen suites of two and three rooms. Interior finish will be of pine and hardwood veneer. Some oak thoors There w'll be steam will be used. heat and a hot water system. All suites will have wall heds and private baths. Bath rooms will have composition floors and tile wainscot Exterior of the building will be faced with pressed brick. Plans are complete and figures are helng taken.

Contracts Awardea.

LOS ANGELES: CAL. — Apartment house. 2 story and base, brick and steel, \$66,000. Architect, Fernand Parmentier, Byrne Bidg., L. A. Owner. Mrs. Harvey Ingerson. Contractors, Contractors, Contractors, Contractors, Contractors, and the steel taken on the percentage hasls and the estimated cost of the huilding is placed at \$56,000.

BANKS.

OROVILLE, WASH .- Bank 2 story and base, brick and concrete, \$15,000. Architect, A. Harlan Toomas, Arcade Bldg., Seattle. Owners First National Bank of Oroville. The huilding will be erected on a corner site, the entire first floor being occupied by the bank. and upper floors will be arranged for modern offices. Interior finish will be of pine and hardwood. There will be a central heating system, special coin vaults and metal window sash and frames. Exterior of the building will be faced with pressed brick. Plans are being prepared and figures will be called for within a month.

BASE BALL PARK.
Contracts Awarded.
SAN FRANCISCO—Base Ball Park.

SAN FRANCISCO—Bass Ball Park. concrete and frame. Cost not stated Architect, Walter A. Mathews, Oakland. Owners, Recreation Park Association. Contractors, Ward & Goodwin, 981 Guerrero street, S. F., carpentry work only. Contract price not stated.

BATH HOUSES.

SEA SIDE, ORE.—Both house, I story, reinforced concrete, \$25,000. Architects, boyle & Patterson, Worcester Bidg., Portland. Owner, J. E. Coates. The bailding will be arranged for a large number of tub baths, showers and a large concrete swimming pool. Equipment will be of the most modern type, including filters and water heating plant. Exterior will be faced with cement plaste. No general contract will be let, the owner doing the work by Day Lebor, and subjecting all material contracts. Excavating and grading baye been started.

BRIDGES AND DAMS.

SANTA CRUZ. SANTA CRUZ CO .. CAL.-Wharf, timber and creesoted piles, \$165,000. Engineer, H. J. Brunnier, Sharon Bldg., S. F. Owners, City of Santa Cruz. The wharf will be about 2,750 feet long and will be erected near the present Fisherman's Wharf. The approach portion, which is 2,100 feet long will very in width from 30 to 42 feet. The main pier will be about 650 feet long and 80 feet wide. This will have a shed on It 210 feet long and 46 feet wide. The entire construction will be of timber and creosote piles. About 2,200 piles will be required, varying in length from 30 to 70 feet, and about two million board feet of lumber. The usual bolts and fittings, spikes, drift pins, etc., will be ased. There will be one track run the full length of the approach and pier. Davits and their mechanical equipment will also be used. Plans are complete and figures are being taken. Bids will be opened on February 6th. Plans and specifications can be secured from the engineer.

ESQUIMAULT, B. C .- Dry dock, concrete construction, \$4,000,000. Engi-neers, Dominion Government. Owners, Dominion of Canada. Details of the proposed dry dock which is to be erected at Esquimagit have been made public. The structure will have a total length of 1.150 feet with an extreme depth at the approach of 50 feet and an average depth of 40 feet at high water. Construction will be of reinforced concrete and steel. The site has been selected and preliminary work of grading has been started. Working drawings are now being completed in the Dominion offices and figares will be called for within a short

VANCOUVER, B. C.—Bridge, stelland concrete construction, \$2,000,000. Engineer, John Wolfe Burry, Vancouver, B. C. Owners, Burrard Inlet, Tunnel and Bridge Co. Plans for a large steel span bridge, which is to be erected over the Second Narrows, are complete, and are now in the hands of the contractors for figures. Blds will be opened on April 1st. Plans, specifications and full particulars can be secured from the engineer, who may be addressed in care of the owners.

PORTLAND, ORE.—Drck construction. Cost not stated. Engineer, G. B. Hegardt, care of the Dock Commission, Portland. Owners, City of Portland. Plans have been completed for Monicipal Dock No. 2, which is to be erected on the East Side. Construction will esimilar to that of Dock No. 1, including concrete, brick and heavy mill construction. The dock will be 525 feet long and will be covered with a slied. Proceeds from bonds valued at \$360,000 will shortly be available. Bids will be called for some time this month but construction will not be started until the money is available.

Contracts Awarded.

SAN FRANCISCO — Fier addition, the ber construction, \$12,768. Engineer, Arsistant State Engineer, Ferry Bldg., S. F. Owners, State of California. Centractors, San Francisco Bridge Co., S. F. Contract price, \$12,768. This work is to be done at Pier No. 25.

CHURCHES.

BERKELEY, ALAMEDA CO., CAL-Church, 1 story, frame, \$10,000. Ar-chitect, W. H. Ratcliff, Jr. First National Bank Bldg., Berkeley. Owners, St. Peters Parish. The building will be erected on Rock Ridge Road, and has been designed in the Mission style Interior will be arranged for a main auditorium, seating 250 people, and Sunday school rooms. Pine and redwood will be used in the finish. Plans provide for a hot air system of heating. Art glass will also be used. Exterior of the building will be covered with cement plaster. Plans are complete and figures are now being taken

PASADENA, LOS ANGELES CO., CAL-Church auditorium, 1 story and base, frame, \$10,000. Architect, Normen F. Marsh, Broadway Central Bldg., L. A Owners, Tremont Baptist Church The addition will be erected in the rear of the present church, and will be connected to the main body of the church by an arched corridor. The building will be 50 by 80 feet. The main audi torium, which is to occupy the entire first floor, will seat 600 people. Basement will contain a social hall and kitchen. Interior finish will be of pine throughout. There will be a central heating system. Exterior of the buildinc will be faced with blue brick base and cement plaster on metal lath. Plans are being prepared.

FACTORIES & WAREHOUSES.

SAN FRANCISCO - Cold storage plant, 5 story and base. CLASS B construction, \$60,000. Architect, Edmund Kollofrath, 560 Belvedere street, S. F. Owners, Merchants Ice and Cold Storage Co. The building will be erected at the southeast corner of Montgomery and Lombard streets, covering an area of 88 feet 2 inches by 89 feet. struction will be of brick and steel, with hollow tile partitions and cement floors. There will be elevator service, metal window sash and frames and flieproof doors. A large amount of stecial machinery will be installed Exterior of the building will be faced with stock brick. Plans have been completed and received the approval of the owners. Construction will be started as soon as contracts can be let.

EMERYVLLE, ALAMEDA CO. CAL -Factory, 1 story, reinforced concrete \$15,000. Architect, none. Owners, California Pickle and Sauce Co., 133 Myrtle street, Oakland. The building will cover a ground area of 125 by 140 feet, and will be practically fireproof In pine with cement floor. Some tile wainsoot will be used. There will be a steam plant and special machinery. Exterior of the building will be faced with cement plaster. Plans are complete and in the hands of the owners. who will do the work by Day Labor. Materials are now being purchased.

LONG BEACH, LOS ANGELES CO., CAL-Packing plant, 2 story and base, Architect, none. brick, \$60,000. ers, National Tuna Fishing and Packing Co., Charles E. Williamson, Pres., Long Beach. This building is to be erected on the harbor front and will cover a large area. Construction will be of the extra heavy type. There will he a large amount of special machinery, metal window sash and frames and fireproof doors. Plans provide for steam heat, pine trim, modern electric and plumbing work Exterior of the building will be faced with pressed brick. Plans are being prepared and wien complete will be turned over to the owners who will take figures.

Contracts Awarded.
NAPA, NAPA CO., CAL.—Laundry building, 1 story and base, brick and concrete, \$16,500. Architect, State Department of Engineering, Sacramento. Owners, State of California. Contractor, R. S. K. MacMillen, S. F. Contract price, \$16,500.

WASH -Warehouse, SEATTLE, story and base, reinforced concrete. \$75,000. Architect's name not given. Owners, Oregon-Washington Railroad and Navigation Co. Contractors, Pearson Construction Co., New York Bldg., Seattle. Contract price, \$75,000. Note: When complete the building will be occupied by the Western Hardware and Metal Co.

FIRE HOUSES AND JAILS.

FRANCISCO-Fire house. 2 story and base, brick and concrete, \$60,000. Architects, Ward & Blohme, Alaska Commercial Bldg., S. F. Owners, City and County of San Francisco. Working drawings for Engine House No. 12, which is to erected at the corner of Drumm and Commercial streets. have been completed and have received the approval of the Supervisors. Figures will be called for at once building will contain the apparatus room and stable on the first floor, and quarters for the men on the second floor. Interior finish will be of pine and hardwood. There will be cement and tile floors. Plans provide for steam heat, a hot water system and vacuum cleaning. Baths will be equipped with showers. Special plumbing and electric work are called for in the specifications. Exterior of the building will be faced with brick and stone

SAN FRANCISCO-Fire alarm ticn, 1 and 2 story, concrete and brick, \$10,000. Architect, City Architectural Department, Temporary City Hall, S. Owners, City and County of San Francisco. A new building will be ereced in Jefferson Square, probably on the site of the old Central Emergency Hespital, which will house the fire alerm equipment and repair department of the city fire department. There will be a general office, several repair shops and storage space. Interior will be finished in pine. There will be steam heat and special wiring. terior of the building will be faced with pressed brick. Plans are to be completed at once and figures will be taken by the Board of Public Works. VENTURA COUNTY, CAL,-Jails, 3,

1 story and base, reinforced concrete, Cost not stated. Architect. A. C. Martin, Higgins Bldg., L A. Owners, Ventura County These buildings will be erected at the following locations: Fillmore, Moorpark and Camorilla, All will be of the same design and construction, with cement and pine floors. steel cells, composition roofs, modern jail plumbing and electric work. There will be wrought iron window grilles and steel doors, Exteriors will be faced with cement plaster. Plans are being prepared.

Metal window sash and frames will be used. Exerlor of the building will be faced with pressed brick. Plans are being prepared.

GOVERNMENT WORK AND SUPPLIES.

Pumps, Mare Island and Puget Sound. The specifications for centrifugal umps, etc., required in the central power plants, navy yard, Mare Island, Cal., and Puget Sound, Wash., bids for which are to be opened at the bureau of yards and docks. Navy Department.

on February 14, state:

General Intention .- 1: is the declared and acknowledged intention and meaning to provide, secure, and Install two motor-driven centrifugal fire pumps in the central power plant at the United States navy yard, Mare Island, Cal., and two steam turbine driven centrifugal hot water heating system pumps in the central power

plant, United States navy yard, Puget Sound, Washington.

General Description.—The motorGeneral Description.—The motorgrowth 1.000 gallon per minute pumps
are to be used for fire and general
flushing service at Marc Isband, Cal.
These pumps shall be suitable for
pumping sea water. The turbinedriven 1.000 gallon per minute pumps
are to be used for the circulation of
fresh bot water in a heading system at
Puget Sound, Wash. There shall also
necessary to rise the present heating
system beater and instalt new section
plying at the navy jurid, Puget Sound,
Washington.

The power plants are row operating and these pumps will be installed in pits below the basement floors shown on the drawings, taking their suction from the existing outlets and discharging into existing distributing systems. All the piping, valves and fittings for connections from the existing outlet to points shown on the drawings are to be furnished under this specification. The runns for Mare Island shall have such characteristics as to make them suitable for fire, flushing, and circulating service, taking their suction direct from the well below the pump pit floor.

La Junta, Cola., Post Office.

The supervising architect, Treasury Department, Washington, D. C. has rejected all bids received for the construction, complete, of the U.S. post office at La Junta, Colo.

Cheyenne, Wyon Repulrs, Etc.

Bank Building, Omoha, Neb.

4 Huram-Lloyd Building and Construction Co., Odd Fellows' Building,

St. Louis, Mo.

5 Frank Kirchhof Lumber Co
Denver, Colo.

For using light colored Colorado marble for all exterior stonework, except where granite is required—Bul 1, \$96.954, 2, \$102.110, 4, \$105.217; 5, \$111.014.

For using Colorado sandstone for all exterior stonework, except where granite is required--Rid 2, \$94,725, 5, \$104,900.

For using light coloied limestone for all exterior stonework, except where grantle is required—Bid 1, \$90,-354; 2, \$93,382; 3, \$92,911, 4, \$97,717, 5, \$101,300.

For alternate 1: Substituting Keene's cement for hard plaster on walls of finished rooms as specified, add—Bid 3, \$600; 4, \$800; 5, \$550.

For painting plaster walls of fintated rooms and finishing cuilings in distemper, as specified, add—Bid 3, \$1,500, 4, \$2,500, 5, \$1,500.

Amount included in the proposal for furnishing and installing of all interior lighting fixtures—Und 1, no bid, 2, \$312; 3, \$2,000; 4, \$1,150; 5, \$900

New Irrigation Project.

Pursuant to the approval of the Secretary of the Interior of the contract between the State of Washington and the United States providing for the Investigation of the Palouse Irrigation project, Governor Lister, Mr. E. Meculloh, engineer in the Reclamation Service, who will have charge of the verk, and Supervising Engineer C. H. Swigart, in charge of Washington Irrigation projects, held a meeting to outline future work and discuss the steps necessary for handling the appropriation provided by the State.

The entire work of the survey will be under the control of the Reclamation Service. The problem is to find sufficient feasible reservoir sites to impound water for the irrigation of a smaller project than the one originally planned, as the Washtucha Coulee was considered infeasible by the board of eigineers reporting on the Palouse project, and railroad construction has made the site at the diversion point on the Palouse River infeasible.

The engineer in charge has game over a number of proposed reservoir sites and a partion of the Weshtuens Coulee A reconnaissance will be made in a short time of the head-waters of the Palous: River for the purpose of locating reservoir sites.

Brigham City, Itah, Construction.

The following hils were received by the supervising architect. Treasury Department, Washington, D. C. for the construction, complete (including fixtures and approaches), of the U. S. post office at Bricham City, Utah Bid 1 Campbell Building Co. of

Santa Clara Valley Vill & Lumber Co., San Jose, Cal., \$500.

Unpudite Screen & Door Co., San Jese, Cal., \$975.

R O. Summers, San Jose, Cal., \$996. Willer Mfg. Co., Milwaukee, Wls., \$1,175.

OH Englues for the Navy.

Lieutenant F. X. Gygax, U. S. Navy, who has been on duty in Switzerland superintending the construction of Diesel engines for submarine hoat G-3, returned to this country last week and has reported for duty in the buttun of steam engineering of the Navy Department. These engines were constructed for the Lake Tornedo-Boat Co but, as the contract has been taken over by the Government, the engines will be shipped to this country and installed at the New York navy yard. Lieutenant Gygax Is understood to have acquired much valuable information regarding the Diesel engines during his tour of duty alroad. Work has been begun on the construction of the experimental oil engines intended for installation the naval collier Mannee at the New York navy yard. Much discussion has been prevailing among the naval enguneers as to the scope of the internalcombustion engine. The most conservative naval view is that it will be limited to small craft, notably in the submarines, where oil propulsion 18 almost universal. Information coved at the Navy Department indirates that the foreigners have encountered much trouble with the Diesel motors. One reason is the high speed of these, most of them from 350 to 450 revolutions per minute. The piston speed has to be as much as 1,000 feet a minute, as against 600 feet a minute in the mercantile type. Hence the time available for the dissipation of the heat by the jacket water is very small, the difficulty of cooling the piston effectively therefor being greater than in the ordinary type of motor. The result may be a crack, which is a serious

matter, since the fuel darge may enter the crank chamber and cause explesions. In this way accidents have happened on several occasions. experience gained on merchant vessels propelled by oil has helped towards the solution of the naval problem, because even in their engines cracked cylinder covers occur. Poth in design and material, however, improvement is taking place as engineers adapt the oil motor to marine conditions. Cu-ricusly enough, accidents have been more frequent in French submarines than in those of any other country But since the cast-steel piston has been replaced by one of cast iron the trouble has been largely overcome Unlike other navies, too, the French navy has many submattices driven by steam Apparently that government has declined not to place entire conficence in the Diesel motor

Tender Sequoia, Repairs.

The following bids were received by the lighthouse inspector, 15th district, Sun Francisco, Cal., for making repairs to generator of tender Sequola: Marine Electric Co., San Francisco,

Cal., \$92; accepted. Crocker-Wheeler Co., San Francisco,

Cal. \$190

Annual Meeting Of Oakland Exchange.

This Year's Social Event Following Election of Officers Proves a Big Success. Enjoyed by all.

Saturday night the Oakland Builders' Exchange held their annual meeting. followed by a very enjoyable evening of music and speeches. At the meeting the following men were elected to serve as Directors for the coming year: J. F. Dingwell, Wm. Makin, T. D. Sexton, John Howard Jr., C. G. Chipchase, Robert Swan, Ed. Hunt. O A. Edwall, Geo. Leiter, M. E. Whitenore and J. B Ching

The committee in charge of the evening's festivities were. O. A Edwall, T. D. Sexton and Wm. Makin and they were the recipients of many congratulations for the program they

The secretary, P. F. Bradhoff, acted as toastmaster and gave a short talk on working togethe; for the continued upbullding of the Exchange, and showed how the members would be benefited if they would remember that there is always two sides to any questlon

The members were ther favored with vocal selections by Frank Oates, Wm. Makin, Mr. Young, James Pedgrift, Tony Galardin and "Nigger" Wilson, whose dialect songs were a great hit. Speeches were made by Robert Knox, Honorary Member; James Pedgrift, Past President of the Exchange, and Charles Downey. After a during which the members partook of refreshments, a troupe from the Galety Theatre sang, danced and gave mono-

logues. Altogether it was a huge success and the affair will long linger in the

minds of the members as one of the mest enjoyable evenings they ever spent

time. Bonds in the amount of \$75,000 will be voted, and all but \$10,000 will be spent in the construction of the huilding. Further mention will be made of the work.

WATER SYSTEM—\$20,000 Amity, Ore Engineer, Louis C Kelsey, Selling Bidg., Portland. Owners, City of Amity. Only preliminary plans have been prepared, but these show a system embracing the entire town. A concrete power house will be included. Pumping equipment is not included in the estimate of \$20,000. Bonds will be voted on February 2nd and it they corry work will be started at once

PANAMA-PACIFIC EXPOSITION NOTES.

Prizes aggregating \$27,000 for the modesial competitions at the Panama-Pacific International Exposition were announced last Friday by the 1915 Elsteddford Association. The first prize amounts to \$10,000 and will be given for the chief choral competition for mixed choirs of not less than 150 voices. This will be competed for by many of the greatest choral societies in the world.

The program consists of fourteen musical events including women's choral competitions, children's choral competitions and instrumental music. In the military band competition \$2000 will be awarded as a premium.

As a preliminary step to the meeting of the Transcontinentol Passenger Association in this city on March 25th to take final action on railroad rates to San Francisco in 1915, a conference of the local passenger traffic managers of the incential times was held recently in the offices of A. M. Mortensen, Traffic Manager for the Panama-Pacific International Exposition in the Exposition Pulliding.

At this meeting a schedule of 1915 railroad rates prepared by Mortensen was submitted to the Jocal passenger traffic managers for their consideration. This was an important step in advance of the meeting in March when representatives of all the railroads west of Chicago will assumble in San Francisco The fixing of railroad rates to San Francisco during the Universal Exposition of 1915 will be one of the principal orders of business to come before the convention and final action will be taken.

The matter of railroad rates to San Prancisco in 1915 is of the utmost importance to prospective visitors and exhibitors throughout the United States and abroad and the action of the railroad companies in this matter is being watched eagerly. The Exposition officials have taken an intense interest in the matter of railroad tases and are anxious to see equitable rates to San Francisco fixed by all of the lines coming into San Francisco.

J. R. Hanify, special yachting commissioner for the Panama-Pacific International Exposition left last Saturday for New Orleans, Cuba and New York. From New York Mr. Hanify will lourney along the Atlantic Coast visiting all yachting ond shipping people with a view to studying the most approved types of boats to berriered in the 1915 yacht races. These races will be held in San Francisco Bay in April, The principal events will

he held with the 12 metre hoats, for which a cup has been offered by Ptesident Wilson.

Six Thomas Lipton is now building a boot to compete in the races. The 12 metre boats which have become so popular in the East and Europe average 39 feet, four inches on the water line and 60 feet over all. It is expected that representatives of the royal families of Europe will send their 12 metre boats to participate in the countest.

buth the removal of the miles of staging from the walls of the Palace of Machinery, at the Panama-Pacific International Exposition, which is now almost completely cleared, the visitor to the Exposition has now a favorable opportunity to admire Inc massive architecture of that huge huilding and to realize what its appearance will be when the color work on it is finished. A considerable amount of this work has already been done and the richly toned marble covering for the six great columns before the main entrance is now being put in place. The sixteen tipped with their many flag poles pointed gold stars, now decorate the entire front of the building. Within, the interior finishing is progressing rapidly.

The two hundred and first convention to meet in San Francisco during the Panama-Pacific International Exposition in 1915 was booked Friday when James A. Barr, Manager of the Bureau of Conventions and Societies of the Exposition, received a telegram announcing that the Phi Kappa Sigma National College Fraterniay had accepted the invitation to convene in Sar Francisco during the Exposition, Final action was taken by the fraternity at its annual convention in Nashville. Tennessee, after four of its California members, officially delegated by President Chas. C. Moore of the Exposition. had renewed the invitation to hold its next convention in San Francisco.

CALIFORNIA METAL MINE PRODUC-TION IN 1913.

_ __

Preliminary Figures Show Increased Output in All Metals.

California shows on increase in output of gold, silver, copper, lead, and zine in 1913, compared with 1912, according to preliminary bgures compiled by Charles G. Yale, of the United States Geological Survey. The mine figures for 1912 were \$19,713,478 in gold and 1,300,136 ounces of silver; the estimates for 1913 Indicate an output of gold valued at \$20,013,274 and 1,606,-261 ounces of silver, an increase for 1913 of \$299,896 in gold and 306,125 ounces of silver. There are about 1,100 producing metal mines in the State, and the deep mines are yielding about 2,700,000 tons of ore annually It is probable that the increase in gold has come mainly from the deep mines, while the added quantity of silver has come from increased output of copper and lead-silver ores

The producing deep gold mines of the State, which yield about 56 per cent of the total gold output each year, are between 450 and 550 in number and are situated in 26 counties. They have nearly 200 reduction plants, with a daily eapacity of over 12,000 tons.

production from this ource is derived from .as five Mother Lode counties, where about 1,300,000 tons of ore are annually treated with an average recovery of \$3.70 a ton. During the year 1913 several of the old mines along the forbills and in the mountain counties have been reopened and equipped after lying idle for years, and some new "prospects have been opened it is a matter of encouragement to deep mining that the two deenest mines in the State-In Amador county-are in excellent ore and are in a prosperous condition The Kennedy, at Jackson, is producing gold ore from a vertical depth of 3,600 feet, and the Alkonaut from 3,300 feet. The ore bodics in both these representative mises are large and well defined at the depths stated and the ore is profitably worked. At these and other quartz mines tailings are not allowed to pass into the streams as heretofore, by agreement farming communities which claimed damages from such tailings At the Kennedy four large elevating wheels lift the tailings and pass them to a 200-acre tract where they are deposited away from the streams that might carry them down to the farming

In placer mining in California the dredges continue to furn;sh about 86 percent of the gold derived from the auriferous gravels. Of the total gold yield from all sources, deep and placer mines, the dredges produce about 38 per cent. As yet there are special signs to indicate any diminution of the total yield of gold from dredging operations, but some of the older fields are on the decline, the best ground having been worked .et. A few of the companies have entirely worked out the paying ground in their holdlngs and have ceased operations. operating companies to the old Oroville field of Butte County (the first worked in the States are seeking new fields in the smoller streems and areas of dredging ground, notably along itivers, where extensive prospecting has been going on during 1913. As for large operations the companies operating on Yuha River near Marysville and in Saciamento County near Folsom have still very extensive dredging areas in reserve and unworked. consequence these companies during 1913 been installing new equipment of greater capacity and efficiency, thereby reducing costs Diedge No 14 of the Yuba Consolidated Goldfields, an all-steel dredge and the largest in California, was built during the year

and started work on Lecember This machine has lanckets of 16 cubic feet capacity, will handle tween 1,000 and 12,000 cubic yards of gravel daily, and will dig 65 feet below the water line and pile tailings 40 feet above water line Another diedge of this company, at work for two years past, handles from 9,000 to 10,-000 cubic vards daily. During the year one dredge has been moved from Oroville to American River, and another from the same place has been rebuilt on Mokelumne Rover. Drodge No. 7 of the Natomas Consodidated has been rebuilt and put into operation. In the early part of '.e year some prospecting for dredging ground was done in Humboldt County and prospecting operations are now being carried on along Trinity River and on Coffee Creek in Trini'y County. seems probable that several dredges will be installed in small areas along Trinity River. The larger dredging companies have during 1913 been making experiments to perfect the goldsaving features of the dredges, and notably for handling the sands." which carry much very fine gold, a good deal of which is now lost in the mining operations. So far however, no developments of great importance have resulted In extensive operations it seems difficult to determine the exact point where the saving of fine gold is of sufficient commercial importance to justify extra machinery, extra handling of material, or slower operating speed.

Dredging has the advantage over most forms of placer mining that it requires less water in proportion to the quantity of gravel handled, and dredge miners are not materially affected by "dry seasons," which occur occasionally in California. The winter of 1912-13 was very dry and there was a scarcity of water for mining operations. As a result the cutput of the hydraulic, drift, and turface mines of the State was restricted. The hydraulic mining Industry most and many of the mines had only a few weeks' water supply to wash the gravel, and others only a few months' supply. Extensive operations in hydroulicking are now largely confined to the northwestern countles of the State, where there are no legal restrictions compelling the miners to impound their debrls or tailings, as there are in the central counties, in the drainage basins of Sacramento and San Joaquin Rivers. But even in Siskiyou and Trinity councies no new operations of magnitude have been beE. H. Williams

gun during 1913, although a numher of smaller mines have been started up or equipped for vork for this winter. The hydraulic mines now produce only about 8 per cent of the placer-gold yield in Cautornia, and it is difficult to interest capital in them, though there are large unworked areas for hydraulic mining in many coun-The drift-mining industry of the State is even less prosperous and very few of these mines have been opened during 1913. Only about 4.50 per cent of the placer gold has come from the drift mines in late years, whereas they formerly yielded 10 to 15 per cent. The necessity of running long tunnels to reach the auriferous gravel lying beneath the lava-capped divides involves considerable investment before profits may be expected. Some of these mines are paying their owners after preliminary work has been done. The surface or sluicing mines of the State are now of small moment compared with other forms of gold mining. Most of the available ground has long since been worked out, and it is only in small areas that work of this class is being carried on, mainly by foreigners.

Contrary to expectation the copper output of California in 1913, according to preliminary estimates, exceeded that of 1912, when the mine production was 33,451,672 pounds. The estimate 1913 shows an output of 36,700,430 pounds, an increase of 3148,758 pounds, notwithstanding continued agitation by farming communities against the damage claimed to be done by smelter fumes and the fact that several of the larger copper-smelting plants, idle from that cause in 1912, still continue unproductive. The largest copper mine in the State, the Mammoth, of Shasta County, continues mining and smelting and it is generally understood that fume damage has not been a great as represented. The Bully Hill mine, also in Shasta County, ic still experimenting with a leaching process for its zinc ores but produced no copper in 1913. The Balaklalı mine, in the same county, has been shipping small lots of ore to another smelter, but its reduction plant has been idle during 1913. This company is now considering the shipment of its ores by rall from Shasta County to San Francisco and thence to the smelter at Tacoma, Wash. Some ore will : Iso he shipped from the mine to the Mason Valley smelter in Nevada. The Mountain Copper Co., of Keswick, Shasta County, ships the ore from its mines by rail to its smelter on the shores of Francisco Bay. In the old fron Mountain mine of this company extensive

bodies of low-grade copper ore have been discovered, and plans have been made for a large concentrating plant to be erected at the mine the concentrates to be shipped to the smelter of the company.

During 1913 a commission was appointed to look into the matter of fumes from the plant of the Selby Smetting and Lead Co. on San Francisco Bay and is still at work, its eport not being expected before next May.

Lead mining in the State made a marked advance in 1912. The mine report for 1912 showed a lead output of 1,144,731 pounds, while the estimated returns for 1913 show a yield of 5,060,841 pounds. This is an increase of 3,916,110 pounds and is due manuly to the renewal of mining and shipping operations of the Tecopa Mining Co. If yo County. Lead is mined in California in the counties a. Inyo, Mono, and San Bernardino,

In zinc mining an advance in output is also shown, though it is small. In 1912 the mine report showed a yield for Culifornia of 4,345,591 pounds; the estimate for 1913 is 4,306,000 pounds, an increase of 185,500 pounds. Most of the zinc comes from the old Cerro Gordo mines of Inyo County, formerly worked for silver-lead ores.

PETROLEUM AGAIN BREAKS RECORD.

Production in 1913 Estimated by United. States Geological Survey at Over 240 Million Barrels.

The remarkably great output of petroleum during each year of this century was more than maintained in 1913. The amount produced in the past 12 months exceeded 240,000,000 barrels, or about 32,000,000 metric tons, ac ording to estimates of David T. Day, of the United States Geological Survey. The production in 1912, which made the record up to that time, was 222,113.218 harrels. The rate of increase in 1913 was greater at the end of the year than at the beginning. California increased at least 10 000 000 barrels over 1912, almost reaching 100,000,000 barrels. The consumption in California almost equaled the production, and the addition to stocks was very slight. Oklahoma also showed a significant increase, with about 6 per cent addition to the stocks. Texas and Louisiana likewise increased their product. The output of the Gulf field oeclined, but this was more than offset by the increases in northern Louisiana and Texas. Wyoming showed a significant increase from the Salt Other States generally Creek field. showed a decline, which was greatest in Illinois.

The following is an estimate of the production in 1913, compared with the statistics for 1912:

Petroleum praduction in 1913 (estimated) and 1912, in barrels,

ed) nad 1912, in barrels.		
States	1913	1912
California	98,000,000	86,450,767
Okiahoma	62,400 000	51,427,071
Illinois	22,000,000	28,601,308
Texas	14,000 000	11,735 057
Louisiana	12,009,660	9,263.439
West Virginia	11,000,000	12,128,962
Obio	8,000,600	8,969,007
Pernsylvania	7,000,000	7,837,948
Wyoming	3,000 000	1,572,306
Kansas	2,000,000	1,592 796
Indiana	900,000	970 009

Totals242,000,000 222,113,218 Appainchian Region.

In New York and Penrsylvania great efforts were made to in-case production by new drilling and more especially by cleaning out old wells. No great success was obtained, and the usual decline resulted. A deep test horing at Derrick City, near Bradford, Pa., was carried to 5,673 feet with the hope of finding oil in the Medina sands. This buring is heing continued.

In West Virginia no new pools comprable with the Blue Cseek discovery of the previous year were opened. The drilling in Roane, Ritchie, and many other counties was successful enough to check the expected decline due to the decreased yield of Blue Creek.

The possibilities of finding oil in western Kentucky aroused general in-

Eastern Ohio was actively drilled with fair results, and in the Ohio River region an interesting innovation in hamiling old wells gave promise of very beneficial conservation of old oil fields in the future. Compressed air was forced into the nearly exhausted off-thearing sands through a well situated centrally in a group of old wells and the increase in yield was marked.

Limestone Fields.

The decline in the Lima (Ohio and Indiana) field was no greater than usual; in fact, the new development in Sullivan County, Ind. added an encouraging new supply.

Illinois continued the marked decline of 1912. Wildcatting gave unsatisfactory results.

Mid-Coatinent Field.

entire Mid-Continent region showed an increase, with a record total output. In Kansas prospecting returned to many localities which had been temporarily abundoned when the Glenn pool attracted all available capital to Gklahoma. During last year the high prices asked for favorable locations in Oklahoma reacted in favor of Kansas. Tile plenomenal bonuses obtained in auctioning leases on Osage Indian lands showed the high value of Oklahoma lands. The oil also increased in price to \$1.03 a barrel and would have gone higher but for the excessive production, which put oil into storage and created Beuncertainty as to future prices. sides satisfactory development of the new Cushing and Cleveland pools, interesting prospects for new pools have been found at Newkirk, Wann, and Healdton

Large Wells in Louisiana.

As usual, many large wells, difficult of control, were obtained in the Caddo region, Louisiana, including Mooringsport, and fires were dissistrons. The product was irregular out showed an increase. In the Gulf region the product declined.

Through the efforts of the Louisiana Conservation Commission, the United States Bureau of Mines, and the oil operators the gas well near Oil City, which had run wild since the opening of the Caddo region, was closed.

Increase in Texas.

The Electra and other fileds in northern Texas continued to increase, and the decline in the Guit region was sight. Much wildcatting was in progiess at many points over the State Chief interest centered in a new development at Moran, in Shackelford County.

Increase in Wyoming,

Production increased in the Salt Creek field of Wyoming, and the erection of additional refineries was communed. An important sult was begun by the Federal Government to recover oil lands entered upon since the first withdrawal order of former President Taff.

increuse in Cutifornia.

At the close of 1912 consumption in California had so nearly balanced the productive rate as to encourage the producers and at least to defeat concerted effort toward restriction of drlliing Many of the wells of 1913 were gishers of the phenomenal type and ailed greatly in increasing the supply. The efforts to increase consumption su ceeded fairly well, so that except ducing the month of greatest production, September, when about 9,000,000 barrels were produced, the consumption almost kept pace with the output and the amount sent to storage was less than a million barrels.

The Fullerton field conclined to yield large gushers with sufficient frequency to justify the attempts to reach the unusually great depth of the oil sands.

Farther north the "west side" fields of Kern County continued as strong factors in the Increasing output of the State, and the Buena Vista Hills, Eld Hills, and other new districts gained in interest. Even the comparatively old Kern River field norr Bakersfield sustained interest by wildcattling to the northwest, where the Standard Oil Co.'s well went into oil and arcused geologic and financial speculation over a large area. The product of the district declined

Coalinga's year had many eventful features, including extendions of territory to the east and the discovery of additional deep sands yielding oils containing paraffin. The value of the field was indicated by the sale of the Callfornia oil Felids, Ltd., to the Snell Trading & Transportation Co., an ally of the Royal Dutch Syndicate, late in the year.

The Santa Maria field onefited by Increased technologic development which the oils were topped and dehydrated with markedly great efficiency, These developments included the successful introduction of the Cottrell olectric dehydration process. The adoption of the Trumble and Dyer topming and dehydrating processes and the great advance in methods for obtaining gasoline from natural gas were among the striking achievements of the year, but while less spectacular, the economies effected by many minor improvements in the great refineries at Point Richmond, Oleum, and El Segundo contributed perhaps equally to the general problem of efficient refining.

In transportation the new pipe time of the General Petroleum Co over Te-brobapi Pass effected cheaper transportation to the south, and the natural-gas line to Los Angeles were equally advantageous. Meanwhite several new tank oil curriers and oil-turning steumships were added to the Pacific coast trade and aided in the reason consumptions.

Fuel Oil for the Navy.

On account of the Increased cost of

fuel oil for lettlessy and the fact that foreign corporatios are rapidly purchasing reserves of oil in the United States, the Secretary of the Navy has recommended to Congress the policy of producing crude oil from the naval of cress and obtaining feel oil from it

There has been must diprogress in minus parts of the country during the year in petroleum rednang sessecially in the delaydration of heavy ands olds, obtaining gasoline from natural gas and synthetically from reavy olds, and in obtaining many special products from crude oils.

TRON ORE BREAKS RECORD.

Production of 1913 Exceeds by Large Tonnage the Record Figures of 1910.

The quantity of from one mined in the United States in 1913 s estimated by E. B. Burchard, of the United States Geological Survey, to lave been because tween 55,000,000 and 000,000 long tons. This estimate is based on pre-liminary reports from 25 of the largest iron-moning companies, which represent the principal iron-producing districts and whose combined output is about \$1 per cent of the total iron ore noticed in 1912.

The average increase ir output shown by these 25 companies was 8 per cent over that for 1912, and if this increase should be maintained by all the iron companies in the United States the total output of iron ore for 1913 should reach 59,500,000 long tons. At any rate, it appears almost certain that the former high record of iron ore mined 57,014,096 long tons in 1910, has been surpassed in 1913. The reports received for 1913 showed considerable variation in the percentage of changes in output compared with 1912, the maximum range being from a decrease of 36 per cent to an increase of 56 per cent. These apparently wide variations were evidently due to cond nons affecting particular companies rather than to general or even local con'itions of the iron-mining industry, moreover, they corceined, for the most part, the operations of companies whose production is not sufficiently great to affect largely the grand total tonnage

In the Lake Superior district, where about 85 per cent of the domestic from ore is mined, the increase in production corresponded closels with that for the United States in general, or about 8 per cent, thus indicating a total production for that district of about 50,out, one long tons compared with 46,-368,878 tons in 1912. The year 1913 is therefore a record year for production and shipments in this discret also. The preliminary figures indicate that the Shipments of Like Suferior are by water will exceed 49,000, 100 long tons. which, together with the all-rail shipments of more than 800,000 tons, brings the figures for total shipments of Lake one very close to the tonnage of ore mined and indicates that not much change has occurred in the stocks of ore at the mines in the Lake district These stroks amounted at the close of 1912 to about 9,500,000 long tons of ore.

In the Birmingham discret, Alabama, the production of iron cer in 1913 as indicated by the preliminary returns was about 10 per cent greater than that for 1912. In Tennessee force was apparently a slight decrease and in North Carolina a dight linerease. New Jersey and New York both showed slight increases, while Pennsylvania showed a slight decrease. In the Rocky Mourant district of Wyoning, Colorado, and New Mexico there was a slight decrease.

The types of non ore produced commercially consist of red and specular fematite, brown ore, character, and siderite, or spoths ore. Hematite comstitutes about 30 per cent of the output, only a very small fusion of 1 per cent of the output is siderite, the production of brown ore and magnetite together constituting nearly 10 per cent of the total.

THE WORLD'S GREATEST MANU-FACTURING CITY.

The metropolitan district of New York City, says a census report, empares 616,928 acres of territory, of which 183,555 acres consistute the area of New York and 433,373 acres the orea of the outside territory. The population of the city of New York in 1910 was 4,766,883 and that of the outside territory 1.706,852, the toril for the district being 6,474,365. As Jefined at the census of 1910, the metropolitan district includes in addition to the central city, fitteen cities, forty-one broughs, two villages, seventeen towns and seventeen townships.

In 1909 the New York city district had 31.782 manufacturing establishments, which gave employment to an average of 948,706 persons during the year and paid out \$607,755,267 in salaries and wages. Of the persons employed, 789,175 were wage earners. These establishments turned out producls to the value of \$2,970,143,352, to produce which materia's costing \$1,-710,324,660 were utilized. The value added by manufacture was thus \$1.259. The New York city district ranked first in 1909 among all the metropolitan districts of the United States in the value of its manufactured prodnets

In the New York city district the greater part of the value of the manufactured products of the district was reported by factories within the central city, which is the leading commercial city and the industrial metropolis of the United States. New York city contained nearly three-fourth (73.6 per cent) of the population of the district in 1910, and contributed more than two-thirds (68.3 per cent) of the value of products in 1909 Its manufacturing establishments constituted over fourfifths (816 per cent) of ell in the district, and gave employment to more than seven-tenths of the wage earners (70.2 per cent.)

ADVERSE REPORT ON OIL IN MOHAVE DESERT.

Government Geologist Holds Out No Hope for "Strike" Near Barston, California.

From time to time since 1900 the region between Mohave and Barstow in the Mohave Desert, California, has attracted attention as a possible oil field, and a report that valuable light-gravity oil occurs there has been widely circulated. Great stretches of land in the northern part of the desert have heen located as oil claims, a considerheen located as oil claims, a able number of derricks have been erected, and wells have been drilled at four rather widely separated localities. Indications of oil have been reported in at least two of these wells. In the early part of December, 1912, R W. Pack, a geologist of the United States Geological Survey, made a reconnaissance of the eastern part of this region in order to obtain a general understanding of its broader geological features and to determine if possible whether oil might reasonably be expected to occur there in sufficient amounts to be commercially valuable. A number of wells were examined ranging from about 1.000 to 3,000 feet in depth, but while a little oil has been reported from some of the wells and showings in others, in none has oil been struct in commercial quantities

Further Drilling a Waste of Money. The main conclusion arrived at as a result of Mr. Pack's examination bag heen entirely adverse to the idea that oil occurs in this region. Traces of oil and gas are present in different purts of the world in fine-grained sedimentary beds, and it is possible that similar traces of oil may exist in the finegrained detrital heds of this region, but it is believed to be highly improbable that oil and gas occur here in greater amounts, and Mr. Pack's opinion is that the northern part of the Monave Desert beteen Barstow and Mohave ofters practically no promise of becoming a productive oil field and that further drilling will prove but a waste of money.

Even if oil was originally distributed in minute quantities through the rock, the structure is not such that It would have tended to collect or trap the oil. 1rregular and faulted folds occur in at least three places northwest of Barstow, and it is generally reported that a well marked anticline passes through the hills north of Barstow. Indeed, it is believed by some that such a fold extends along the north side of the desert from Tehachapi Pass nearly to Barstow. This idea is erroneous, for the only folds here are small, discontinuous, much faulted. Faults, not folds, dominate the structure. Thus the structure is much more favorable for the escape of any oil that might possible have been accumulated here than for its concentration in appreciable quan-

This and additional information on the oil prospects of the Barstow-Knamer region is contained in Bulletin 341-E of the United States Geological Survey, copies of which may be obtained free on application to the Director of the Survey Washington, D. C

WATERPHOOFING CLOTH,

Wiley Got the Iden From an Accident in a Dye House,

The waterproofing of cloth so universal today was unknown twenty-five years ago. In 1899 Thomas Fearnley Wiley of Bedford, England, took out the first patent for the process known as waterproofing cloth.

He got the idea from an accident in a Yorkshire dyelouse. Certain goods had been wrongly dyed, and the worknen were directed to wash out the surplus logwood color with alum. After the goods had been dried the im-

provement was so marked that the dyer ordered a repetition of the alum washing. The cloth was sent to the wetting modisine, but the workmen found that they could not wet it it passed through the wate and came out dry. Thus was the discovery made that cloth could be waterproof and yet remain porous.

The process used today is as follows: Cloth intended for rainproofing are first freed from grease and are then saturated in specially constructed machines with the clear liquor obtained in adding together solutions of pure suphate and alumine and acetate of lead. The lead is precipitated out, and the acctate of alumina is dried in the fabric. The cloth undergoes further treatment with wax, and in one system wax is applied frictionally from a block under the pressure of a pneumatic roller. Under the method more generally used the wax or mixture of waxes, is melted by heat and applied in an infinitesimally fine film by the action of a ductor roller .-New York World.

The Eureau of Mines has copies of these publications for Iree distribution, but can not give more than one copy of the same bulletin to one person. Requests for all papers can not he granted without satisfactory reason. In asking for publications, please order them by number and title Applications should be addressed to the Director of the Bureau of Mines, Washington, D. C.

COUNTY COURT HOUSE REPAIRS.

STOCKTON, January i...—The feasibility of adding three tories to the county Courthouse, the removal of the dome, which is considered the worst firetrap in town, and the installation of steel in the construction work if such a theory happens to be advanced properly, were questions brought up in a discussion by prominent clitzens at the Courthous recently.

That the addition would greatly enhance the beauty of the building and that the proposed work would do away with the erection of a City Hall, in case the city decided to erect one were points enlarged upon by several,

It is understood that the Board of Supervisors appreciates these facts, and is now awaiting action on the part of the city officials before going ahead with the plans.

QUESTION OF A FRANCHISE.

STOCKTON, January 15.—The Railroad Commission recently denied in Germit of Company a certificate to germit it to do business in Stockton. An appeal, taken to the Supreme Court, was argued and submitted. Stockton granted the Oro Company a franchise and the Supreme Court is asked to decide that the franchise is sufficient. Decision in favor of the company would limit to a considerable extent the powers granted the Railroad Commission by the Legislature.

PLANS ARE PREPARED FOR MORE CITY BUILDINGS,

The Board of Works has requested the Supervisors to authorize the construction of these buildings: Cooper School, at Jones and Lombard streets, at an estimated cost of \$115,000, the plans being prepared by Houghton Sawyer; engine house No. 12, at Drumm and Commercial streets, according ao Ward & Blobme's plans, at an estimated cost of \$60,000; auxiliary fire alarm station in Jefferson square, according to the City Architect's plans, at a cost of \$40,000; Potrero Emergency Hospital, according to G. Colmesnil's plans, at a cost of \$17,500,

The Board has invited bids for the beating and ventilating system for the new City Hall, the cost of which is estimated by the architects at \$75,000.

J. D. McPherson, an engineer, has been appointed by the Board at \$250 a month to go to Johnstown, Pa., to inspect the special track work for the municipal railway lines that is to be manufactured under contract by the United States Steel Products Company, which will defray his traveling and hotel expenses.

CANAL TO OPEN FOR SHIPS JULY I.

The use of the Panama canal for commercial shipping will not be practical before July 1st, according to information received by the Chamber of Commerce from Colonel Goethals. Numerous inquiries at the office of the foreign trade department from various transportation companies and other enterprises to he affected by the use of the great waterway prompted the local organization to cable Goethals at Culebra on Thursday, requesting the approximate date of opening.

Several large shipping concerns have already chartered steamers and are in readiness for the first trip through the canal. Reports a while back stated that February or March would mark the completion of work in connection with the canal in the event that further slides did not interiere. Colonel Goethal's latest announcement is not accompanied by an explanation of the latest delay.

LOCAL MAN BUYS BIG TRACT IN THE VALLEY.

STUCKTON, January 10.—It is announced that the big McLaughlin tract, near Tracy, has been purchased by Louis Titus of San Francisco. It is also said that Titus will spend at

terst half a million domars for im-

The tract involves perhaps close to 12,000 acres and is known in Stockton as the Crocker-Winship property. Torte are some 8000 acres under cultivation, while about 4000 acres are unreclaimed. The price was not stated

CITY ORDINANCE RULES OVER STREET OPENING.

The city Atorney notified the supervisors and the Board of Public Works of the decision of the Supreme Court sustaining the validity of the new street opening ordinance under which public service corporations must obtain permits before cutting up pavements to extend their service. The decision was given in a cuse growing out of the arrest of an employ of the Pacific Gas & Electric C uppany.

The city attorney also rendered an opinion to the effect that the city should pay the premium on the surety bonds required of employes of the Municipal Railway.

FIRST WORK IS DONE ON VAN NESS CITY LINE.

Members of the department of engineering, as one of the preliminary steps in the building of the new Municipal lines, have just measured the curves and cross sections of the Union and Geary street municipal railways where they will turn into Van Ness avenue.

The building of the Van Ness line will be one of the first pieces of railway construction to be done under the recent bond election. This will be one of the main arteries leading to the Exposition.

STATE ACCIDENT BOARD HEADY.

SACRAMENTO, January 15.—The State Accident Insurance Commission held its first meeting at Sacramento recently and discussed expenditures with the State Board of Control. Commissioners Harris Weinstock, Will J. French and Secretary Ira B. Cross were present.

The first claim under the new law, that of John F. Burns against the Yuba construction Company, was liscussed. Burns fell through a hatchway on a dredger and broke a rib. The commission took the case under advisement.

More than \$200,000 in premiums has already been paid into the commission, representing insurance on payrolls aggregating \$20,000,000, and the organization which the commission is preparing to take care of possible injured is an extensive one.

PLAN NEW SCENIC HOAD,

RICHMOND, January 15—The John Nicholl Company is preparing to construct a scenic road from the extension of Richmond avenue on the west side of the city over the hills facing on the inner harbor and going around Columbian Knob.

The road will be a loop and will tie in with Richmond Avenue. Construction is to start as soon as the rains cease.

ALAMEDA COUNTY'S FAIR CON-TRACT.

OAKLAND, Jan. 15 -- The contract between the County of Alameda and the BUILDING AND INDUSTRIAL NEWS.

Panama-Colifornia Exp tion in San Diego in 1915 was recent if The agreement calls for 2000 test of space in the building to be devoted to the central coast countries. The amount involved is \$5000. The confinit was based upon the recommendations of a c Alameda ornity exposition commo- ion and the contract was accepted by onanimous vote. The county must pr. \$2500 down, 25 per cent in 90 days and the balance on the comple ion of the entral counties building

HARBOR BONDS FIND ONE BIDDER.

RICHMOND, Jun 15 -01:15 one bidder offered to take the \$200,000 bond issue for harber bonds which the city council has offered to sell. The opening of bids was up last evening and the bid was that of Farson, Son & Company of Calcago, who offered a premium of \$11 for the issue.

The bld went over for one week for a report from the City Attorney

NEW PLANING MILL PHON.

Otto F. E. Burmeister and J. A. Hart have formed a co-partnership under the firm name of Hart & Surmeister for the transaction of a general planing mill business at 1068 Brannan street, near Tenth, being the former plant of the Usona Mfg Co.

Both these men are practical men of many years experience and any work entrusted to their care will be done right.

CALL HOND ELECTION.

RICHMOND, CAL, Jon 13.—The Beard of Education has set January 31st, a Saturday, as the cate when the proposition of issuing bonds in the sum of \$150,000 for new school buildings will be submitted to the electors of this city.

PLANS BIG OIL TANKS.

BAKERSFIELD Jan . . The Standard Oil Company is preparing to build a field of oil tanks at Pond station, and will employ a crew of about 200 men and with seven hundred head of houses and mules prosecute the work The work will be storied within 60 days. Forty or more tanks ranging size from 35,000 to 55,000 barrel capacity will be constructed

UNION STATION WANTED AT MODESTO

MODESTO, January 15 - The move for a union station for Modesto has been launched by the Chamber Commerce. It is planned to have the Tidewater Southern trans, operating between here and Stockton, the Modesto-Empire trains, whileh Modesto with the Santa Fe at Empire, and the Southern Partie trains all enter at one station. The Southern Pacific is planning to build a new station here this year. Frank thessey Jr., succeeded J. W. Corson as president of the chamber.

IRRIGATION PROJECT DP.

RED BLUFF (Teham., Co.), Januar) 13 .- A meeting of the Board of Directors of the Iron Canyon Project Association, consisting of Harry Willard, Charles A Lange, William P. Lunning, G. G. Stice, A. L. Conard, Ed F. Lennon, Earl L. Gans, J. H. Pradley, John O'Connor, John Trede and H P Andrews, will be held this

evening in the Court House.
Hon. E. G. Hopson of the United States Reclamitton Service will be present to discuss matters of great importance to the Association

\$500,000 MARINE HOSPITAL FOR SAN FRANCISCO.

WASHINGTON, January 15 - A new \$500,000 marine hospital building for San Francisco was asked in a bill into duced by Senator Perkins.

WHEN PHOTOGRAPHY WAS DIS-COVERED.

Perhaps it is difficult fully to understand the panic into which the followers of the art of painting were thrown on the discovery of photography, since to us the place of the two arts is so thoroughly assured and so assuredly separate. But we must remember that to an unphotographed use the art of pointing necessarily meant something quite different from what it means to our own kodaked generation. "Figure to yourself," cries a writer in shrill excitement in the Moniteur Universel, January 14, *839, "figure to yourself a muror, which, after receiving your image, presents you your portrait, as indelible as a painting and much more faithful" And in rendering the image of nature how immensely significant becomes the language of the bill which the French was introduced before Chamber to pension M. Daguerre: "To the traveler the apparatus of M. Daguerre would become a continual and indispensible necessity. It will enable tiem to fix their impressions without having recourse to the hand of a stranger "-Annie Nathan Meyer in At-

SPREAD OF THE SOCIAL CENTER IDEA.

That the social-center idea has come to stay is indicated in a report just compiled by Clarence Arthur Perry. of the Russell Sage Foundation, New York city Perry shows that in places where the movement has already started the rate of growth is much litgher than the rate at which spreads in new localities In other words the actual results of the social center are more effective in getting public support than the words of its most enthusiatic chompions. work is getting on a more solid basis. seventy-one cities had, during the winter of 1912-13, paid workers for some form of social center activity, as opposed to forty-four the previous scason, and the amount expended in the maintenance of school centers has grown from \$139.535 in 1912 to \$324,-575 in the past year. There are 1927 paid workers reported. This, with the volunteer workers, brings the number of persons engaged in social center direction considerably above the 3000 That the general social and recreational possibilities of the "wideruse-of-the-school-plant" movement are making a constantly greater appeal may be seen from the fact that in 981 schoolhouses there were public entertainments and lectures; in 496 school buildings there were open meetings of adults to discuss local problems; athletics or folk dancing in 474 schools, and social dancing in 190 А notable development of "wider use" in

1912-13 was for election and other civic purposes. Balloting during elections took place in 529 schoolhouses; 259 buildings were used for registering voters; and political rallies to the numher of 481 took place in school edifices

B OTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. The new Ritz-Carlton Hotel, in Philade'phia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Etevator Company.

ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton,

New York

The Ritz-Carlton,

Montreal

The Plaza, Buenns Aires Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Carlton, London The Retz, London

The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators—which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100 per cent correct.

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fitty-six flats for one man all of which were recreted in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

"KINNEAR" STEEL ROLLING DOORS & SHUTTERS

INNEAR STEEL ROLLING DOORS are designed to afford fire protection and for the closure of all openings in which ease and speed of operation and economy of space are considerations. They are adaptable to all classes of new or old building construction and by their use make possible the closing of very large openings which could not otherwise be conveniently covered.

In addition to the above uses, their extensive employment for fire protection and the high degree of efficiency shown by them in actual fires, has caused the KINNEAR Company to produce a shutter of a distinctly fire retardant character. With this end in view, numerous tests extending over a period of five years were made, and effects carefully noted. As a result, we are now in a position to offer for special fire protective purposes KINNEAR Steel Rolling Doors and Shutters of the "Abacus" Construction, all of which bear the label of the "National Board of Fire Underwriters' Laboratories,"

Special Catalogue showing Abacus Construction can be obtained on application.

Recent great/conflagrations have fully vindicated the claim of the "KINNEAR" STEEL ROLLING DOOR to pre-eminence as a fire-stop. Placed side by side with various other forms of fire retardants it has in every case remained in place even after the others were destroyed.

We will consider ourselves favored if allowed to explain and make quotations on any constructions meeting your definite needs.

We have just received from the press a new Handbook on Steel Rolling Doors and Shutters Illustrated only with California Installations. WOULD YOU LIKE A COPY?

Editorial Comment.

The status of the Hetch-Hetchy water supply was a honeless tangle till Engineer Freeman made his report on the subset. Then the atmosphere was clarified, a layman could understand the subject. Then the atmosphere was formulated whereby the city could get a water supply.

In an analogous way the attitude of the United States in regard to Alaska has been made plain by Secretary Lane Under Ballinger and in his report. former Secretaries of the Interior there was a lot of report and divers contentions and nobody seemed to know just what the situation was. The present Secretary in his report for the fiscal year ending June 30, 1913, has clearly stated the condition of that country, the immense wealth that it contains and the duty that the United States owes to this vast country in the frozen zone

The government has withdrawn Aloska from the possibility of being exploited by the money interests of the country. The Guggenheim interests are no longer a menace to the coal lands and the timber and mineral wealth of the country. But as yet the government has done nothing to substitute a safer guardian for the public interests and for the development of the country

Secretary Lane suggests that Board of Directors should be established into whose hands would he given all the national assets of the country, its lands, its forests, names, its fisheries, its waterways and railroads. This board would have nothing to do with the internal affairs of the country and would exercise no nowers save such as Congress might giant over the property of the United States.

The arguments set forth by the Secretary in favor of this policy are briefly these: In the first place this board would advice Congress what to do from a first hand knowledge of conditions. And it would bring authority under one head so that there would be some definite responsibility and unity of action. As matters stand the control of land is in one department, of forests in another, of roads in another, of fisherles in a fourth, of railroads in another department and so on. to show to what ridiculous ends this subdivision is carried the Secretary cites the fact that the care of brown bears is in one department and that of black bears in another No wonder that there is no satisfactory admiristration of government under such conditions. One would seem to think that authority had been purposely subdivided to render it inefficient make it impossible to fix responsibility. The Secretary very appropriately states that there can be no satisfactory administration of land laws or of any other laws at a distance of 5000 miles. That Alaska's opening and improvement should be treated as one problem and that "the eye that sees the need

should be near the voice that gives the

order.

During the forty-six years that we have owned Alaska it has added to wealth more than \$500,000,000 through the yield of its mines, fisheries and furs. Secretary Lane believes that the territory should be developed so far as possible out of her own revenues and resources. The funds raised from the revenues derived from her mines, her forests, her fisheries and her furs to be used in the construction of railroad and telegraph and telephone lines and for any other purpose which would make her resources more available to the world.

A great deal of criticism has been made of President Wilson concerning his attitude on the Mexican situation by the socialists. Their idea seems to be that the peons should be restored to the land of their fathers and that the lands that have been taken by the oligarchy of the Mexican republic should be restored to the place they originally belonged. They say that the peons do not want progress, that they want to live as their fathers did. till the soll to get enough to exist on and continue in the way of their

This may all be a pretty theory but it stops short of the one essential of all government-and that is protection of life and property. How are bandits to be prevented from robbing their neighbors, and how is crime to be prevented? By what magical transformation are all people going to obey the moral law? Suppose every body was restored to their lands who would protect them in their rights of property and guarantee them personal safety or prevent them from being murdered by their neighbors?

These socialistic theories are usually half baked and leave out many essential elements of human nature and political philosophy. The preamble to the United States Constitution recites the purposes for which the constitution is enacted to he "to establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." This sort of constitutional government the President is seeking to have established in Mexico. How best to secure it is the great problem which seems well night impossible of solution. In the meantime every fly-upthe-creek philosopher is telling how it could be done over right. With Randolph Hearst is exhorting about the American people and every jowsmith is having his sea. So far the President has the support of the creat mass of the thinking people of the country. The majority think he is of the right mind and that he knows more of the stimation than all his crites combined.

Among the unemployed in Los Angeles it was found that the men accepted any job under any conditions, at any wages, and that the women likewise accepted any job under any conditions, at any wages, provided it was something else than domestic service. Many of them would not accept domestic service at all, though plenty of positions were offered at good wages. This is perhaps not so surprising as the other fact that of those who were willing to a cept domestic services nearly all were extremely particular as to the nature of the place accepted. A woman looking for clerical work took the first place she could get and asked no questions. Another woman looking for washing, serubbing or similar hard work likewise took the first place she could get and asked no questions. But every woman looking for domestic work scrutinized the conditions of the places very critically and usually refused several places before being induced to accept one

This at first blush would seem to be a serious commentary on the conditions imposed by many employers in dumestic service. Possibly, however, some of the difference is inherent in the very nature of the jobs. All other forms of work afteet only a portion of the life of the worker. Almost any conditions are endurable for eight hours a day. The social stigma which has somewhat attached itself to domestic service doubtless keeps many otherwise willing workers out of it. even among those who are not deterred by this social stiging there is more disposition to distinguish between one job and another than in any other occupation.

Another interesting stdelight on domestic service as shown by the report that in Los Angeles ser ants working for more than \$40 a month are never out of a job, while large numbers of servants working for less than \$30 a month are chronically unemployed in the face of the fact that more than an equal number of employers of such servants are chronically without belo-Tile two classes of course are those who have learned the business and those who have not. For the cook who can cook, the waitress who can wait, or the general Lausckeeper who can do nouse work there is always a job at high wages. For the servant who wants a place but will not condescend to learn the trade there is also a place, but there is usually discatisfaction on both sides.-Fresno Republican

The San Francisco Examiner has become the champion for the abolition of prize fighting. Editor (illy it comes forth for the abolition of the brutal sport. What reminds one that if the public was interested in the sport as it was a few years ago the Examiner would hire all the characteristic of the country and devote four-fifths of its space.

The Bulletin, for just occe, is leading the hysterial wave that seems to be sweeping over the country in regard to crimes and criminals and the white stave problem. Just now the people are standing in line to see the exhibition of moving patture, as to the inside of the white slave traditional a curious mab falls over self to see a lot of pictures that an intelligent person ought not to hold at if he was paid a dollar an hour for lost time.

Anything to get a circulation and make money for the paper. Such has become the office of the 'great dailies' as they are called. If it is to debauch to public taste and e pouse a crime in order to fill its purve the average messpaper will do it. And the present state of the theatre, the moving picture shows, and the cyfersions that run in the papers that eater to the ever changing laste of the multimose sem to indicate the public basic is not improving at any abatining rate of speed.

Edgar Lucien Luckin, the astronomer at Mt Lowe observatory, has come out with the statement that it is impossible to predict the appearance of sunspots and as a consequence Father Ricard's theory as to the cause of storms must of necessity fail. If what Mr. Larkin says is inne that the records of years past that have recorded every sunspot that has ever appeared during the time show that there is no law by which the appearance of sunspots can be forefold wan any degree of accuracy of would no essarily follow that storms depende g upon such phenomena for their corse could not be furefold

This controversy will give some good effect in that it will end popular attention to the study of estromony and the almost incomprehensible mither mitiral laws by which the movement of the majestic suns and worlds are determined.

The one-tion of Lorance exclusion is again up before Concress and it is said that the Raker bill has been suppressed for the time being. It is a strange thing that the people of the Eastern States and particularly the Eastern press wish to decide questions off hand in which the people of Califormia are interested and are particularly hostile to us. In the case of the Hetch-Hetchy water supply, for instance, the general attitude of the Eastern press was that San Francisco was a burglar and seeking to steal by the method of a highwayra in the property that belonged to de National Government. And in this they were led by the great and only John D. Works, Senator from the great State of Califot nia.

It is a strange thing that there is no objection by the Japanese argunst the action of Canada in regard to exclusion. In the case of Canada the laws are much more dristic. But here the Japanese are evidently backing on the sentiment of the Eastern people and the Bastern press and their power in Congress and in the hearding California has to bear the berden imposed upon it by a prejudic depress.

The National Geographer Magazine for December has a lading article

opon the Religious Ponances and Ponasiments Seef Inflicted by the Holy Men of India. It is illustrated with seventy-five photograph: showing the strong and often houribut self torture that these religious functies inflict upon themselves. It is interesting to know that such seets still exist in a leid where religious philosophy and metaphysical research has been carried to such a degree of relimement.

Generally speaking religious ideas bevoe changed materially in the last neit century. Mechaneal and industrial progress and universal education have led the average mind to view man in his relation to the world at a different angle and the scientific investigations of modern times have rendered unlenable man, preconceived does of former years. This readjustment is aptly referred to in an editional of the Kansas City Star entitled. The Sea of Faith?

In the middle of the last century Witthew Arnold voiced the doubt that engulfed the scientific men of his time in his poem, "Dover Beach:"

The Sea of faith

Was once, too, at the full, and round $-\varepsilon$ of th's shore

Low like the folds of a bright girdle furled. But now I only hear

it- melancholy, long, withdrawing roar, lettrenting, to the breath of the night wind, down the vast

olges drear And naked shingles of the world

In the sadness of these lines is emloated the tragedy of so many of the men of his generation who were brought up in a faith which they were mabble to make their own when the time came to work out their independunt philosophy of fife. It was an age of distillusionment, in which many a locate cited out, "They have taken way my Lard and I know not where they have laid him."

But "bover Beach" belongs definitely to the middle of the last century, when it looked to many men as it the foundations of their beliefs were crumbling in recent years a change has come in the mood of the men of the Arnold tyre. It might be called the practical mood.

Men have discovered that as they worked, as they took up the duties of everyday life as they met their obligations to their nelighbors, the tide of faith came back. This was a fact that had to be biken into the account by the philosophers and psychologists. They saw that man cally was a prignous animal and that his devotion to ideals was as much a part of his life as his exting and steepher, were.

The coreful studies of men of scientific temper, like Royce and James in the United States, and Bergson and Ewken abroad-to say rothing of a lost of lesser men-have explained the resultly of the religious ife "Explained" is the word, rather than "demonstrated," For this reality is experienced, not proved, by logic. So today more than ever before, the naked slongles of the world are suffused with held and everywhere hosts of men and women are working to realize those ideals which the prophets of all ages have proclaimed.

ELEMENTS ON STONE.

Effect of Heat and Corrosion by Gasses us Determined from Experiments with Building Stone. By Wm. A. Parks, II.A., PhD.*

From Report on the Building and Ornamental Stones of Canada, published by the Canadian Department of Mines, Ottawa.

The atmosphere consists essentially of oxygen, carbonic acid gas, and nitrogen; the last of these is practically inert, but both the oxygen and carbonic acid act as chemical agents towards effecting the destruction of stone. As an accessory constituent of the atmosphere, water is always present; on settling from the atmosphere the water, whether as rain, dew, snow, or hoar frost, is charged with a certain amount of both oxygen and carbonic acid gas. The water, therefore, which enters the interstices of stone, or which may act on the surface only, is not pure water but a mild acid and an oxidizer as well. It is to the presence of these chemical agents in the water that is due the oxidizing of the uncolored salts, and also the gradual change of silicates, such as feldspar, into a soft clay-like material. Pure water is able to dissolve limestone scarcely at all, but ordinary rain water with its little charge of carbonic soid, effects the solution of 'imestone with comparative ease. The great caves of Kentucky have been on, out of heds of limestone by the solvent water of percolating rain water. It is not to be expected that buildings constructed of limestone will escape. As there is no means of avoiding the carbonic acid, the builder must exercise all possible precautions to guard against the soaking of water into the walls of the building. This simply brings us back to the question of porosity which has already been considered. Other things being equal, a porous limestone will dissolve more quickly than a compact one. The percentage of carbonic acid in the atmosphere of large cities is slightly greater than in the open country, the difference, however, much less than is ordinarily supposed. The average volume per cent of carbenie acid gas in the atmosphere is 0.03 to 0.04 per cent. In London on clear days it is 0.038 per cent, on dull days 0.045 per cent, and on cloudy days 0.051 per cent. The direct action of the gas cannot therefore be greatly different in cities and in the country. Experiments have been made to determine the effect of an atmosphere of carbonic acid in the presence of moisture on samples of limestone and marble. The tables published show little deterioration in the short period of time over which the experiments cxtended. As it is not only in a moist atmos-

As it is not only in a moist atmosphere but when the stone is sonked with water that the carronic acid produces its injurious effectr, it was decided to determine the corrosive action of this material on specimens impressed in water. For this purpose cubes were prepared having an approximate size of one inch and therefore presenting six square inches to the action of the solvent. The cubes were dried at 110 degrees C., and carefully

weighed, they were then measured and the exact superficial area determined specimens were suspended by threads in a large bottle filled with distilled water into which a stream of carbonic acid gas was conducted. The water was renewed every four days and the action allowed to continue for four weeks. At the expiration of this time the specimens were removed washed in distilled water and rubbed with the tips of the fingers to remove loose particles, as such grains constitute an essential loss as well as the particles which fall from the cubes while suspended in the bottle. thorough drying, the specimens were weighed and the loss noted. A very interesting and valuable series of figures was obtained, which is believed to express, as well as any single set of results can, the relative durability of the different stones tested. In the table given in the appendix the loss is expressed in grams per square inch of surface exposed. While the actual loss is in itself small in most cases, the figures regarded in a comparative way show a wide divergence in the resistance of the different stones to the action of carbonic acid, which must be regarded as the most potent agent in promoting the decomposition of stone. An analysis if the table shows that the limestones and dolomites varied from 0.005 grams to 0.33 grams, that the sandstones show a range from 0.0018 grams to 0.1135 grams, and that the crystalline limestones and dolomites very from 0.0019 grams to 0.9 grams. It is interesting to note also that the granites and greisses were effected to an extent ranging from 0.000164 to 0.0045 grams per square inch of surface.

The change in color brought about by the action of the earhonic acid is very distinct and corresponds closely with the alteration resulting from natural weathering of long duration in all cases known to the writer; it is inferred, therefore, that this test furnishes a ready means of determining the change in color that will take place on exposing a stone to the weather. A table is inserted in the appendix expressing the change in color as thus determined.

It is well known that dolomite is much less easily dissolved by carbonic acid than calcute and it would seem therefore that dolomite is the more durable material. In all the tests made the dolomites lost far less in weight and suffered less change in color than the limestones, in spite of which, authors state that it has been proved by experience that limestones are less durable than domnites. It is apparent that one must remember the nature of the stone when using these figures for comparative purposes. It would be absurd to state that a limestone which loses ten times as much as sandstone is ten time; less durable But, it is believed that, within the group of limestones, those which suffer the greater loss are the less durable, In eities where large amounts of cold are consumed the air is contammated with sulphurous held which is a much stronger corrosive than carbonne acid. It is advisable to ascertain, in the case of stone intended for near railway stations and manufactories, its resistance to the action of such limes. Buckley performed this test by placing small cubes of stone, carefully dried and weighed, in large glass bottle in which smaller bottles of water with open mouths served to keep the atmosphere moist. Sulphurous acid gas was then introduced, and allowed, with occasional renewals, to act on the stone for 44 days. The specimens were then removed, washed, dried, and weighed and the loss noted. Discoloration, devilopment of cracks, etc., were also observed. Buckley found that some of his samples increased in weight while others lost; they were all, however, more or less discolored and etched.

The Custom House at Ningare Fulls, the constructed of Quienstown Limestone. This stone, in most structures, presents a good appearance after many years of exposure, but in the building mentioned, the dressed work shows had exfoliation as well as corrision along the helding planes of the stone. There is little doubt that this unfortunate result is to be attributed to the sulplucous acid function the locomotives of the nearby Medician Central Railway.

Effect of Heat on Stone.

Like nearly all substances, stone expands when heated and contracts on cooling: the frequent repetition of this process from day to day cannot fail to impute the strength of the stone. The deterioration usually manifests itself by scaling and exfoliation. some cases, also, incipient cracks are developed which permit of the more leady access of water thereby facilitating decay. In climates where there is a considerable difference between the temperature of night and day, more attention must be given to the selection of stone of slight expansibility tien in more uniform climates. Another injurious effect of the expansion and contraction is to open the joints between contiguous blocks of stone Small as the opening is, it is sufficient to allow the entrance of water with all harmful effects. The amount of expansion of the different types of stone has been determined by different authors. The figures obtained by W II Bartlett are most commonly quoted as follows:

It should also be noted that delicate experiments have proven that stone once expanded by heat never quite contracts to its original size. The difference may be only infinitesimal, but

It is sufficient to show that the stone has suffered some permanent injury. Numberless repetitions of the same treatment cannot fail to weaken the whole stone throughout, its moss. It is generally considered that fine trained and homogeneous stone is less liable to injury than coarser and less uniform varieties.

The excessive heating of stone when subjected to fire causes a relatively large expansion, followed by rapid contraction. The change may be extremely sudden, as when the flow from a fire hose comes in contact with the hot stone. The fire resisting properties of stone are therefore a matter for serious consideration on the part of bullders, particularly in large cities. It may as well be plainly stated that no stone will pass through a serious fire uninjured. The amount of injury resulting from a fire of given intensity varies greatly with the character of the stone. Some stones withstand fairly well a temperature as high as 1200 degrees F., while others are totally destroyed at a much lower temperature. With regard to the heat resisting power of the dif-rent types of stone there seems to be some difference of opinion. It would seem, however, that limestone and marble, if the heat has not endured long enough to calcine the stone throughout, are more durable than granite and sandstone. Certain ciliceous examples of the sandstones and conglomerates are, however, able to withstand a very high temperature.

Tests to determine the fire resisting prepared cubes to a temperature of 500 degrees F., which is gradually increased up to 1200 degrees or 4500 degrees, T., which is gradually increased up to 1200 degrees or 4500 degrees, The specimens are then allowed to cool naturally or they are rapidly cooled by teling plunged in water. Buckley found that all three types of some were practically destroyed at temperatures between 1200 degrees and 1500 degrees. F

CIVIC OWNERSHIP PAYS IN

By Edward P. E. Troy.

Seattle may just loast of possessing the largest municipal electric plant in the United States, with an income greater than any similer American municipal undertaking. The vote of ite people last year, approving of the purchase of the Lake Cushman and White River power sites will enable that city soon to operate one of the greatest electric plants in the world. It will furnish at cost 215,000 horse power for the lighting of the city and its homes, and the operation of its minimateuring industries, thus insuring the commercial supremacy of that makes.

From the beginning of the city in 1858 its charter has provided for municipal lighting. In 1902 the voters approved of a bond issue for that purpose, and in two years the plant was in operation. The private company was charging 20 cents per kilowatt for residence lighting. Lannedlately the city commenced to build its plant this rate was reduced to 12 cents.

The city commenced supplying current for $5\lambda_2$ cents; in 1911 reduced its charge to 7 cents, and last year to 6

cents. The company has been forced to follow the city in these reductions. As a result of municipal ownership, the people of Seattle are paying today one dollar for the same quantity of electricity that they had to pay three dollars for to the private company.

The city plant has a or established a rate of 3 cents for cooling, washing sewing, froning and other domestic appliances. The people of Seattle through municipal ownership, are furnished the great mobern convenience e-lectricity—for all purposes in the home at such a low cost cs will permit its use by every one.

There are over 800 arc and more than 5,000 other electric lamps in the municlpal street lighting system cluster lights alone illuminate more than twenty-five miles of streets. The company formerly furnished 213 arcs at \$66 per year, and 1,891 other lights The municipal plants gets \$54 for each are and \$9.60 for incandescerts. It will be seen that the company charged 66 per cent more than does the city for incandescents, and 22 per cent more for arc lamps. Thus municipal ownership has enabled Seattle to greatly increase its street lighting making it one of the best 'ighted cities of America. Portand, Sin Francisco and Los Angeles could do as well if they became free from the corrupt influence of private lighting companies

The total revenue of the plant for 1914 was \$272,384, and the operating expenses, including interest, \$315,016 for depreciation, and the balance put into new construction. The power lines are being connected with those of the Tacona municipal electric plant, insuring continuous service to each city should either of the plants met with any accident, this will save the building of steam reserve plants by either city.

The entire plant was built by City Engineer R, H Thompson, and has assistant, J D Ross, the inter of whom is now in charge of the plant. With Ress gives the loval cluzens of Scattle credit for the splendal success of the plant with plant, in spite of victous opposition of the corrupt corporations opposing

ELECTROLATIC EXTRACTION OF COPPER IN CHILE,

German electrical appropriatus is now installed in a plant losted in Chile for extraction of copper from the cre. and the works are said to be operating quite successfully at present. It makes use of the new Stemens-Schuckert electrolytic process. The electric station is situated at Cobij: on the coast and 180 miles from the conner mines which are inland, and the current is sent to the copper extraction plant at the mines by a power line. The electric station is steam operated, and is equipped with 16 hollers which are fired by oil fuel. Four steam turbines are each coupled to an alternator of 15,000 horse-power size which delivers 5000 volts, and step-up transformers raise the voltage to 110,000 volts for operating the power line. At the copper mines is a sub-station cortaining motor generator sets of 3000 horsepower size which receive the current from the line and convert it to 250-190 volt current for use in the electrolytic tanks - Scientific American.

California has untold quantities of

repper ore. The only question is smelting and extraction of the metal from the ore. Power is cheap in the high Serras where the ore is found and if a practical means of the extraction of the metal by electrical process has been perfected, there is no reason why a great industry should not be developed.

THE LEANING TOWERS,

There is an Italian story of an invalud oid gentleman who by long looking at the leaning tower of Plsu came to the delusion that the tower was perpendicular and everything else was sharting. A friendly priest, who sought to distillusionize him, adv.d a frivortic grandchild of the old man to say whether the tower was straight.

"Of course it leans," the little boy

told the grandfatorr
Mr. Wilson in Washington desires the
fresh view. By the concentrated, invalid view of professional Washington
the tower is perpendicular and everythoughly shorts.

thing else slants. Specialists in any department of thought or action assume that only they are competent to judg correctly of their specialty. But they, too, have their crooked towers that, by long azing on, they think are straight. It was not the old generals who changed the rules of war. It was the young bonaparts who did not know the rules of war-rather, who did know them well enough to know that they "becomed."

Practitioners of the law are likely to despite the rash layma who criticises their tower. It stands for "the accumulated wisdom of the centuries," it implous to say it leans. If it is not in true proportion it is only because the life surrounding the tower has become odilupe—Kansas City Star.

A CITY OF HOTELS.

iff the building of lotels as of theatres, there is no end. The newest, adont to be opened, cost \$10,000,000, overs an entire block, has 25 stories and 1000 bed rooms, each with a bath. If the next ten years repeat the story of the last ten years, the new hotel will soon take its fixed place among the leading hotels of the city and ten or a dozen newer ones will arise to dispute public favor. New York has learned to view calmly the wonders of its great buildings; in the rapid change of conditions they rapidly lose ther air of novelty.

One buge hotel that will house a whole townful of people in luxury seems to make no difference. Old ones co and new ones come t) meet growing needs. It is all port of the normal expansion of the first city of the country, Neither London nor Pars nor Berlin nor any other European capital has provided on the same scale splendid accommodations for trivelers or its own people.

own people.

In the old days the foreign visitor used to laugh at the Trited States, where every hotel was called a "palace." So far as present-day New York is concerned, the old globs have lost their point la their equipment and arrangement, in their comforts, conveniences and provisions for entertainment our horels have become more fluxurious than any palace both in appointments and prices.—New York World.

Firms desiring news on special classes of hulldings, such as Books, Charches, Schools, Hofels, etc., will find such items all classified and grauped under proper headings, commeacing on this page. These same items are again repeated under "LOCALATIES" to the inst part of nor gews department.

APARTMENT HOUSES.

OAKLAND, CAL — Apartment notes, 2 story and base, frame, \$10,000, Ar-OAKLAND, CAL - Apartment house, chitects, Hutchinson Bros., 470 street, Oakland. Owner's name withheld. The building will be erected on 31st street near San Pablo avenue, and will be arranged for suites of two and three rooms. All apartments will have private bath rooms and wall beds. Interior finish will be of pine and red-Bath rooms will have composition floors and tile wainscot. Entrance will be finished in tile and marble. Gas grates and tile mantels will be used Exterior of the house will be covered with rustic and shiplap. Plans are row being completed

RICHMOND, CONTRA COSTA CO. CAL.-Apartment house, 2 story and base, brick, \$12,000. Architect, James T. Narbett, Richmond. Owner, O. E Liddell. The building will be erected at the corner of Agnews and Richmond avenues, and will be arranged for two three and four room apartments. The interior will be finished in pine and redwood. Some hardwood floors will be used. There will be steam heat and a hot water system. Bath rooms will be finished in tile wainscot and will have composition floors. Wall beds will be installed. Exterior of the building will be faced with pressed brick. Plans are now nearly complete and figures will be asked for shortly.

SEATTLE, WASH. - Apartment house, 3 story and hase, brick, \$35,000 Architect, none. Owner, John Hakanson, 2725 Nob Hill avenue, Seattle, The hullding will be erected at the corner of Spruce and 12th avenue, and will cover an area of 50 by 120 feet. Plans provide for sixteen suites of two three and four rooms. Interior finish will be of pine and redwood, with hardwood floors in the living rooms and halls There will be steam heat, an oil burning system, vacuum cleaning and hot water supply. Bath rooms will have tile wainscot and composition floors All suites will be equipped with wall beds. Entrance will be finished marble and tile. Exterior of the building will be faced with pressed brick. Plans are complete and the work will be done by Day Labor. Bids will be taken in about two weeks for materials

APARTMENT HOUSES ada ek LOS ANGELES, CAL - Apartment house, 3 story and base, brick and steel, \$40,000. Architects, Blanchard, Green & Tifal, Van Nuys Bldg., L. A Owner, B. F. Stevens. The building will be erected on Santee street near 10th, and will cover an area of 50 by 140 feet, Interior has been arranged for a total of 78 rooms, which will be divided into two and three room suites. All apartments will have private toths and wall beds. Interior finish will be of pine with some hardwood panels and oak floors. Plans provide for steam beat, a bot water system and vacuum cleaning. Exterior of the building will be faced with pressed Plans are complete and the brick. Work will be done by Day Labor under the superintendance of Webb & O'Neil, Lankershim Bldg., L. A.

LOS ANGELES, CAL -Apartment house, 3 story and base, brick and Cost not stated Architects, R D. King and E. C. Taylor, Consolidated Realty Bldg., L. A. Owner, Elias Shedoudy. The building will be erected at the corner of 38th and Main streets, covering an area of 50 by 130 feet, There will be a total of 65 rooms arranged in two and three room suites. The first floor will contain three stores besides the entrance. Interior will be finished in pine with elm panels and hardwood floors. Plans provide for steam heat, a vacuum cleaning system, wall beds and hot water plant. Bath rooms will have tile walneedt and composition floors. Exterior of the bullding will be faced with pressed brick. Plans are being prepared.

SACRAMENTO, CAL - Apartment cuse, 2 story and base, frame, \$10,000. Architect, none. Owner, A. W. Norris, 409 21st street, Sacramento. The huilding will be erected on 18th street, and has been arranged to contain modern suites of three and four rooms. Interior finish will be of pine with oak floors in the living rooms. All suites will have private bath rooms and wall beds. There will be gas grates and Bath rooms will bave tile mantels. composition floors and tile wainscot. A central heating system and hot water supply will be installed. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and in the hands of the owner who will do the work by Day Labor.

SAN FRANCISCO-Apprent house, story and base, reinforced concrete, \$60,000. Architect, Matnew O'Brien. Foxcroft Bldg., S. F. Cwner's name withheld. The building will be erected at the corner of Devisadero and Duboce streets and will cover a large area. Suites will contain two, three and four rooms with bath. Interior firish will be of pine and hardwoods with oak floors in the principal rooms. All apartments will be equipped with wall beds. Plans provide for steam heat, elevator service, a hot water system and vacuum cleaning. Bath tooms will have composition floors and tile wainscot. Marble and tile will be used in the entrance. Exterior of the building will be faced with pressed

brick. Plans are being prepared. SAN FRANCISCO-Apartment house. 4 story and base, reinforced concrete \$22.750 Architects, Rousseau & Rousscau, Monadnock Bldg., S F. Owner, J. D. Reite. The building will be erected on the south side of Post street west of Larkin, having a frontage of 25 feet by a depth of 129 feet. There will be pine and hurdwood panels with some oak floors. Plans provide for steam heat, an automatic elevator and vacuum cleaning. All suites will be equipped with wall beds and will have private bath rooms. Bath rooms will have composition floors and tile walnscot. Marble and tile will be used in the entrance. Exterior of the building vill be faced with cement plaster.

Plans are complete and the work will be done by Day Labor. All materials are being purchased.

Contracts Awarded.
SEATTLE, WASH. — Apartment house, 6 story and base, reinforced oncrete, \$75,000. Architect's name not given. Owner, Mr. Dow. Contractor. David Dow, 21st and Spruce streets, Seattle. Contract price, \$75,000.

BANKS

REDONDO BEACH, LOS ANGELES CO., CAL-Bank, 2 story and base Class A construction, \$25,000. Architect, L. B. Pemberton, Auditorium Bldg., L. A. Owners. Farmers' and Merchants' National Bank. The building has been designed in the classic pessend unia peors of the pur elsis brick and terra cotta. Walls and floors will be of reinforced concrete. Interior partitions will be of hollow tile and metal lath and plaster. The entire first floor will be occupied by the bank, and will be finished in hardwoods, marble, ornamental plaster and bronze grilles. Upper floor will be subdivided into ten offices finished in hirch. There will be steam beat, a vacuum cleaning system and metal window sash and frames. Special vault work is also catle! for, have been revised and flyures are now being taken.

BRIDGES AND DAMS

Contracts Awarded.
SAN FRANCISCO — Pier construction, \$146,215. Engineer, Assistant State Engineer, Ferry Bldg., S. F. Owners, State of California. Contractors, Healy-Tibbitts Construction Co., S. F. Contract price, \$146,215. Other figures submitted for this work will be found under the heading of San Francisco in this issue.

CHURCHES.

SAN FRANCISCO - Church, ferced concrete construction, \$50,000. Architects, Shea & Lofquist, Bankers' Investment Bldg., S. F. Owners, Star of the Sea Church. The building will be erected at the corner of Geary and 8th avenue, and will be designed in the Mission style. Interior will contain an auditorium seating 750 people, Sunday school rooms and social rooms. Interior finish will be of tine and redwood. Exterior of the building will be faced with cement plaster. Roof will he of red clay tile. Working drawings are being prepared.

geles, Cal., 90 days; 155,000 lbs.

A long-standing controversy between the constructing quartermaster at Honolulu and a manufacturing concern of Brussels, Belgium, over the delay in the delivery of certain special toolsteel hars, etc., has been terminated. The order for the material was placed in July, 1911; the material was shipped in November of that year, and did not reach Honolulu until March, 1912, too late to be of any use. It was claimed that the delivery was not made within a reasonable time after the date of the order, and the quartermaster refused to accept it. The foreign firm, in the course of the correspondence, expressed a willingness to make a reduction in its bill of \$350. It appears that there was nothing in the original order to indicate the time of delivery, and the contractors were not informed at any time that there was urgent need of the -teel. It is held by the War Department that the question devolves on the definition of what may be regarded. under the circumstances, as "a reasonable time which may be taken by the contractors for the delivery of the material, and, in view of the fact that the steel was shipped within four menths of the date of the order, the shipment is regarded as having occurred within a reasonable time There was, however, considerable delay between the date of shioment and arrival of the material at Honolulu, but there is nothing to show why or where this delay occurred.

Government Manufacture of War Mnterial.

In the hearings which have been onducted this session before the House military and naval committee it is observed that some of the members expressed the keenest interest in ascertaining whether more work may not be done at government plants. The chief of ordnance of the Army, for instance, and the chief of the quartermaster corps were asked repeatedly by members of the military committee whether there would not be a material saving in the public expense by having supplies made at government plants instead of purchased under contract. It is evidently desired to increase as much as possible the output of the military-naval shops. It so happens that this agitation is created for the n.ost part by memhers in whose districts are located navy yards or arsenals or other government plants, and and the desire for economy in that direction is horn of the expectation that the increase in plant output will mean the employment of adultional labor. One of the questions presented to General Crozier had to do with the increase of the plant at Rock Island Arsenal with a view to making a saving of 25 per cent on contract prices on artillery vehicles, such as carriages. limbers, and calssons minufactured at Rick Island. The estimates are made sufficiently large to permit of such vehicles, for which the capacity is limited, being manufactured by contract. This is necessary, as conditions are not always such when appropriations become avallable as to permit of the work being done in a reasonable time at an arsenal. The increased capacity at Rock Island to manufacture artillery vehicles is equivalent to appropriations of about \$1,200,000 a year. A saving of 25 per cent on the carriages, limbers, and caissons included in appropriation of \$1,200,000 will be made and the saying used to secure additional material This saving would amount to approximately \$215,000. If all the artillery vehicles covered by this year's estimate could be manufactured at an arsenal under as favorable conditions as at Rock Island, the saving would be approximately \$380,000. Under present (enditions as to the arsenal equipment for manufacturing field artillery material no saving could be made on the estimates for the amount of the appropriation of \$1,200,000

ftiverside, Cal., Vanit Sheiving.

The contract for installing metal

at Riverside, Cal., has een awarded to Watson Mfg, Co., Jamestown, N. Y., at \$271: time 90 days.

Protest of Supply Firm.

In the award of a contract under the War Department during the present week an interesting question was presented The hidder whose proposal was accepted specified a certain type of fixtures for installation in the general work in which he was interested After the contract was awarded the successful bidder represented to the War Department that it would be to hls advantage if he could furnish an article or fixture from a manufacturing source different from that he had specified. The recommendation was cle would be accepted. This led to a protest from the firm which had been originally named as the source of the fixtures.

The protest appears to have been well taken. It is in the interest of the government that blddes be required to furnish an article which they have specified or which is exclusively named in the specifications. Of course, when something "equally good" is permitted then it becomes a matter within the discretion of the government official which of several substitutes designated are acceptable to the government. When an article is named to the exclusion of all others, either by the successful bidder or in the goverrment specifications on which the bld was made, it is important that there be no exception, which in the end permits the establishment of dangerous precedent. With such a departure from a strict rule the government is in the position of never knowing what it may obtain. Those whose bids were not accepted are not treated fairly, because with the opportunity to amend the specifications they, too, might have occasion to modify their bids. If the government is going to adopt a new rule it should do this before hids are opened, in order that there may be no opportunity on the part of rival bidders to entertain grievance or to believe themselves the victims of favoritism.

Billiags, Mont., Furniture.

The following bids were received by the supervising architect. Treasury Department, Washington, D. C., for installing furniture in the U. S. post office at Billings, Mont.:

Louck & Hill Co., Richmond, Ind.,

\$1,197.85; 90 days. Federal Equipment Co. Carlisle, Pa., \$' \$81.25; 100 days.

Commercial Cabinet Co., Chicago, Ill., \$2,160; 60 days.

Improvement la Comptroller's Office, It is graftfying to observe that Comptroller Downey, who has succeeded Comptroller Tracewelt in the Treasury Department as the official who must finally pass upon the claims of contractors and other subjects in controversy with the accounting officers of the government, is manifesting a liberality and breadth of view, which is, to say the least, refreshing. Under the former administration the claimant had a right to feel that It was semewhat of the "hit and miss" variety of decision to which his interests

were subjected. The chief objection against the action taken by the comptroller's office under the late administration arose from the fact that the tenor of the decisions appeared to be billious and bellicose. There seemed to he a disposition to find out just wherein the contractor could be set back by an exact interpretation of law and regulations. There was not that practical consideration of questions which might be expected of a judicial officer. Since Mr. Downey has been comptroller the tenor and tone of the comptroller's decisions have perceptibly changed for the better. There seems to be a willingness to believe that the centractor now and then, at least, has a meritorious claim.

Novol Torpedo Station for the West Const.

The recommendation of the Secretary of the Navy to expend \$260,000 for the increase in the facilities of the torpedo station at Newport has suggested the question among members of the House Naval Committee as to the wisdom of having this sum, or a part of it, used toward the establishment of a torpedo factory on the Pacific Coast. There was an appropriation made two or three years ago for the purchase of land on the west coast for the establishment of a repair tornedo station. with a view to renairing torpedoes on that coast instead of going to the expense of transporting them across the centinent, but the land which was selected at Keyport Peninsula, Wash., was held at such a high figure by the "iand sharks" that the Navy Department was forced to abandon the idea of acquiring this tract. Since then no botter success has attended the efforts of the naval authorities to obtain the land or any other site which would be equally available for the purpose,

-HALLS & SOCIETY BLDGS-

RICHMOND, CONTRA COSTA CAL-Lodge hall, 3 story and hase, brick, \$59,000. Architect, James T. Narbett, Richmond, Owners, Richmond Eagles Hall Association, Mr. Narhett and a Building Committee are now considering several sites for a new lodge building. Automatic water heaters will be installed. Exteriors of the houses will be covered with cement plaster on metal lath. Flans are complete and the owner will do the work by Day Labor. All materials are now being purchased.

PIER CONSTRUCTION **ueq.**— \$146.215 San Francisco. Engineer, Assistant State Engineer, Ferry Bldg., S. F. Owners, State of California. Contractors Healy-Tibbitts Construction Co., S. F. Contract price, \$146,215. Other figures submitted for this work will be found under the heading of San Francisco in

PLANS FILED FOR MUSEUM.

Plans were filed January 23rd with John P. Horgan, Chief Inspector of Buildings of the Board of Public Works, for the construction of a museum in Golden Gate Park, to cost approximately \$200,000. Plans for this structure were prepared by Architect Lewis P. Hobart,

Much New Work At Army Posts.

Working Drawlogs for New Stables Being Completed and Figures Will Be Culled For Shortly.

The Constructing Quartermaster's office at Fort Mason are now working over 1000 men on the various construction enterprises on which the department is engaged. About 500 of these men are from the ranks of the unemployed and were turned over to the Constructing Quartermaster by the city authorities and were put to work on the construction of McDowell avenue

NEW STABLE BUILDINGS.

The Secretary of War has allotted out \$90,000 for the construction of five new reinforced concrete stables, which are to be erected for the Presidie and Fort Scott. Each building will be about 185 feet long and 68 feet wide. Floors will be of paving brick while the most approved stable equipment will be installed, jucluding electric lights and plumbing Each stable will have a capacity of about 100 animals. Exteriors will be covered with cement plaster and roofs will be of red clay tile. As soon as plans and specifications can be finished the work will be advertised for bids. The site for the buildings is now being cleared ly day labor, but a contract will probably be let for the grading. Plans for a complete drainage system through the stable site have been complete and sent to Washington for approval. MUCH NEW ROAD WORK.

McDowell avenue, on which over 500 of the unemployed are at work, is to be converted into a scenic boulevard about four miles long. The roadway will consist of a one course six inch concrete pavement, using a one part cement, two parts sand and three and one-half parts stone m:x, laid fairly dry. The rest of the roads in the reservation will be constructed of oiled macadam. All work will be done by day labor except the placing of the concrete, which will be let by contract. PIER AND BREAKWATER.

Plans for a new pier and breakwater. which is to be erected at Fort Berry. have been prepared by the Constructing Quartermaster's office and have been sent to Washington for approval. The pier and breakwater will be of stone with an apron wharf on one side 200 by 50 feet and an approach of 115 by 25 feet. The pier will be carried on 10 inch iron pile, the superstructure heing of frame. An estimated cost of \$65,000 is placed on the work.

HOSPITAL IMPROVEMENTS. A ward for the treatment of special cases at the Letterman General Hospital has been authorized by the Surgeon General. This building will be two storics high covering an area of 80 by 28 feet, construction being of reinforced concrete. Exterior will be faced with cement plaster and a red clay tile roof will be used. Plaus include modern heating, electric work and ventilating. An estimated cost of \$20,000 is placed on the work.

The refrigerating plant at the Letterman General Hospital is to be enlarged by the addition of another ice machine and ice tauk. Plans for this work are now being completed by Engineer O. W. Degen of the Constructing Quartermaster's office

Work of converting Fort Point into a detention Barracks for 500 men will be started in a few days. The work will be done by the purchase of materials and prison labor.

Bids For Court Of Palms and Flowers.

Streblow-Freeze & Peterson Men for Big Exposition Building Nell A. McLean Next.

The lowest bid received for the constructon of the Court of Palms and Flowers was presented by Strehlow-Freeze & Peterson at \$184,000, while the next lowest figure same from Nell A. McLean at \$197,000.

Bids were opened by the Buildings and Grounds Committee of the Panama Pacific Exposition Company.

State Harbor Board Award Pier Contract.

Heaiy-Tibbitts Construction Company Will Build Pier No. 46. Bids to He Cuited For on Two Jobs.

Bids were opened by the State Board of Harbor Commissioners on Thursday, January 22nd, for the construction of Pier No. 46. The lowest figure was submitted by Healy-Tibbitts Construction Company at \$146,215 and a contract has been awarded. A complete list of bids follow:

Pier No. 46. San Francisco Bridge Co...\$151,770 Healy-Tibbitts Constr. Co., 146,215 Thompson Bridge Co..... 149,870 Hyde-Harjes Co. 156,000 At the same meeting the Secretary was instructed to advertise for bids on widening pier No. 54 and for the construction of Ferry Slip No. 8.

City Bids Opened.

Bids Received For the City Morgne. Four Bidders identical on Furnishing Copper Hail Bonds.

Bids were opened by the Board of Public Works at their Wednesday afternoon session for the construction of the morgue in the new Hall of Justice, T. W. McClenahan presented the low figure at \$34,330 Other figures received were as follows:

Morgue, Hall of Justice. William Bateman \$43,250 Newsom, Wold & Kohr..... 35,760 Sound Constr. & Eng. Co.... 36,527 Grant Fee 40,000 Caldwell & Son..... 36,572 T. W. McClenahan & Co . . . 34,330 McSheehy Bros. 35,933 Monson Bros. 35,837 O. C. Holt 37,940 Lids were also received for furnish-

ing copper rail bonds for the new Municipal lines, Unit urices were Unit prices were osked for on eight propositions. The

THE ISES OF BIRCH.

Birch is so popular for interior finish toat our renders, will doubtless, appre late an authentic statement of the properties and uses of this versatile wood. Fortunately, we are able to give them this information tased upon a recent bulletin of the United States Potest service.

The bulletin speaks of "sweet" birch, meaning the species known botanically as "detuta lentu," but since a great deal of the so-called "sweet" brich used in the factories is simply the red heartwood of vellow ldreh (betula lutea). the information given is of interest to every producer of hirch toroughout the United States. We quote from the bulbeing as follows:

Early Uses.

Though in early times sweet birch was used chiefly for fuel there is evidence that it was on the market as timber more than a century ago. As early as 1791 shipments were going regularly to Clyde and Liverpool,

Burch is believed to have been the hrst wood employed as an imitation of malogany in this country, but the exact date is uncertain. Boston furniture makers were putting it to that service year early. It is still so used and one of its commercial names is mahogany build given it because of its success as counterfelt. Cherry birch is another of its names, due to its success as a substitute for cherry. It is sometimes called red and white burch, the first name be towed the case to heartwood is red, and the second because the sap-Wood is white

While Boston was staining hirch and refling it as mallogany in furniture and inusical instruments. New York carringe makers were building fine panels of it and finding ready sile for their product without biding I under false names. The artistic front of many a clest of drawers passed for mahogany a century ago cand may still pass as such in antique collections i, though the wood grew in Massachusetts, New York or Pennsylvaria,

Furniture

Among the earliest attempts to make high grade furniture at sweet birch were those successfully carried out at Poston Bland-carved arms for chairs Were turned out in attractive designs Tie early hand processes expanded and developed into manufacturing as the te m is now understood. Sweet birch, being a wood of high grade, has been prominent in furniture manufacture from the first successful attempts. It is physically equal to nearly any wwod; it is bravy, dense, of good milling qualities, lends itself to stains and fillers. and holds finish well. There is probably no important line of furniture produced in this country which does not make use of some birch. The earliest furniture of this wood seems to have been chairs, and at this day chairs are of sufficient importance to claim first place. The range rises from the cheap camp chair or stool to the finest rocker The entire article is not necessarily birch; in fact, it seldom is. This wood may supply only the back the seat, the arms, the rockers, or some of the slats, rounds, or spindles A special place for it is found in opera chairs, in which three or five ply veneer, the visible wood being birch, is shiped for seats and 'acks School desks in large numters are manufactured in similar patterns. Morris chairs, of which the arms at least are of tels wood, are widely sold and a still higher grade is found in upholstered and plain parior suites, including davenports, sulas, setecs, squalis, and lounges. The beavier of these articles are on casters, which are often of birch, as its bardness, and strength fit it for such ser-

Several important places in church furniture and littings are admirably filled by sweet birch, although it is not so extensively employed as oak. It is made into pews, pulpits communion tables. contribution plates, pulpit chairs, and bible stands

It is a popular cabinet wood and erters into the construction of a long list of articles from kitchen tables and cuploards to elastic bookcases and bling calcinets. It is not always the outside wood but it usually is, especially the right colored reartwood. It should be horne in mind that there are two kinds of hirch as the cabinetmaker views it-heartwood and sapwood. The difference is color is apparent at a glance, and the workman selects his material for the sake of color. He selects it as carefully for another reason, if he employs glue to fasten the parts together. Birch does not noil readily, because of its tendency to split and much of it; either dovetailed or glued. If it is glued the best results are attained only when sapwood is glued to sapwood and heartwood to heirtwood. Birch appears in many kinds of desks, not only as an imitation of cherry or malrogany but on its own merit. Smoking stands and card tables of this wood are also popular. Children's cribs, folding beds, china closets, extension tables, wall cases, hall trees, taborets, umbrella stands, cliffoniers and dressers of sweet birch are listed by many factories

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, nower and besting any activities. of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Colarch and Cold in the Head. It makes you miterable, doesn't sit? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it mill you get the Clover Leaf Catarra Remedy, and use it. It will relieve you, and you'll wonder why you had not used it cooner. We are so positive that this will relieve you of your Catarrh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

OUR SIZES:

Clean River Sand - - to 3, inch Gravel and Crushed Boulders ½ inch to 1 inch " " " " 1½ inch to 1½ inch " " " 1½ inch to 2¼ inch

Roofing Gravel to 1-2 inch Cobble Stones for Bungalows.

With a Modern Equipped Plant at Niles We Are Able To Give All Orders PROMPT ATTENTION

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philade'phia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

> ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton. New York

The Ritz-Carlton,

Montreal The Plaza, Buenos Aires

Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Hyde Park, London The Ritz, Paris

The Carlton, London The Retz, London

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory clevator service, and its other excellence can not overcome the handicap. Our offices in ninetyone cities in the United States are always at the Architect's call and can assist you in making your clevator specifications 100 per cent correct.

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

San Francisco

As a carpenter and builder, Mr. Neidick has had Iwenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which sland as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

"KINNEAR" STEEL ROLLING DOORS & SHUTTERS

INNEAR STEEL ROLLING DOORS are designed to afford fire protection and for the closure of all openings in which ease and speed of operation and economy of space are considerations. They are adaptable to all classes of new or old building construction and by their use make possible the closing of very large openings which could not otherwise be conveniently covered.

In addition to the above uses, their extensive employment for fire protection and the high degree of efficiency shown by them in actual fires, has caused the KINNEAR Company to produce a shutter of a distinctly fire retardant character. With this end in view, numerous tests extending over a period of five years were made, and effects carefully noted. As a result, we are now in a position to offer for special fire protective purposes KINNEAR Steel Rolling Doors and Shutters of the "Abacus" Construction, all of which bear the label of the "National Board of Fire Underwriters' Laboratories."

Special Catalogue showing Abacus Construction can be obtained on application.

Recent great conflagrations have fully vindicated the claim of the "KINNEAR" STEEL ROLLING DOOR to pre-eminence as a fire-stop. Placed side by side with various other forms of fire retardants it has in every case remained in place even after the others were destroyed.

We will consider ourselves favored if allowed to explain and make quotations on any constructions meeting your definite needs.

We have just received from the press a new Handbook on Steel Rolling Doors and Shutters Illustrated only with California Installations. WOULD YOU LIKE A COPY?

Editorial Comment.

The government railroad in Alaska is to be built in the near future. Forty millions of dollars is to be spent in the construction of the road and in the development of the country and all people will have an equal chance in saipments over the road. Chronicle reluctantly admits that the road is to be constructed and that Alaska and the Pacific Coast greatly benefit thereby, but states that if the rest of the country is willing to pay for the construction that we should

It is the plan of Secretary Lane to have Alaska pay for its own development. This, it no doubt will do in very short order. It is a vast country of very great resources and the wealth of its forests and mines and coal lands and fisheries will no doubt soon repay the government for any money expend-

What the Chronicle and all the other organs of special privilege would have liked would have been to see the resources of Alaska turned over to the Guggenheims or some other similar syndicate. The railroads would then controlled by special inhave been terests and only those on the inside would have had the advantage. The country would probably have been developed if it would make money for the syndicate but only the privileged classes would have had a show. The construction of the government railroads will set a new standard of development and when it is once established there will be no return to the

old fendal methods.

One feature of the Exposition that will be interesting to builders will be a first hand production of the architecture of other nations in the construction of their respective buildings. The world will be represented. And the religion, the climate and the mode of life will be embodied in the architecture that has grown up under difforent conditions and environments. After all the main feature of the Exposition will be its bulldings and grounds, its landscape gardenings and lighting effects, so that while the industries of the world will be represented and the progress of mankind chronicled in its exhibits the art of the builder will be the first and last exhibit of the great show.

Now the question comes up in the matter of trying the condemnation suit of the property of the Spring Valley Water Company. The company in sists upon trying a pending rate case before going ahead with the condemna-

tion proceedings. Delay is certainly a word that is over worked in the attempt to get a water supply for this city. The safeguards that are hedged about citizens are often taken advantage of by the unscrupulous. These interminable delays interposed in the path of progress makes one wish for the plenary power of an autocratic ruler that would kick some of the obstructionists into the Pacific ocean.

The Senate has passed the bill for the leasing for a period of six years of the dry dock to be constructed at Hunter's Point by the Union Iron Works. As the bill is practically assured of passage it means the construction here of a dry dock big enough to take vessel of the American Navy and ship that can pass the Panania canal, San Francisco Buy is thus recognized as the logical base for the Pacific Navy the merchant marine of the world will find a similar base at this port. San Francisco will eventually come to its own, because of its geographical position and its relation to the commerce of the western world.

Twelve good men and true have returned a verliet that Lcali Alexander, who shot J. D. Van Baalen, is not guilty of the crime of murder. It is reported that the jury found that the sury found that was temporarily insane when the crime was temporarily insane when the crime was committed.

There seems to be a stronge standard of life in the minds of most people. When it happens that a woman kills a man for any reason she is generally treated as if she was ni irresponsible being and not endowed with any brains. The old standard of morals of the middle ages is placed upon modern society where women lave as much, as if not more, rights and liberties than men.

In the case of the Alexander woman it was a clear case of partners in crime. She could not plead deception or spologize for her own acts in the matter. Society had not wrenged ber, she had as good a chance in the world as thousands upon thousands of other girls. So that it would seem that she lad no more excuse for the plea of insanity than the man who gets crazy drunk and runs amuck and murders the services that he was drunk when be committed the crime.

Meanwhile the white shave pictures are drawing immense houses and being eulogized by the pulpit and press. All felt middle citizens will be disposed to give the woman the lost of it when it is shown that she has been taken avanuage of by reason of ignorance, peterty or weakness of cry sort. But the sort of sentiment that now seems to have the hold on the public is not brestd on a rutional view of human forsed on a rutional view of human

nature and it puts a premium on sorts of wickedness that should be condemned as strongly as the crimes it is supposed to expose.

A decision has been conded down by the Circuit Court of Appeals sustaining the contention of the Wright Erothers in their infringment suit on their patents to the accordance. This sustains the popular opinion for the Wright Erothers were certainly the first to practically demonstrate aerial nevigation. It is true they did not apply any new principle. But they combined and adjusted the ileas allowed the properties of what had before been a failure. As the Scientific American says:

"This is the history of many other inventions. Morse, Bell, Pullon and the rest, all of them seized the abandoned devices of their producessors and combined them into connected operative inventions. To the world at large its seems but a little thing to step in this manner from failure in success, yet only a master mind succeeds in grasping the true relation of a dozen mechanical devices, hitherthe theometric devices and in untiling them in some brilliand in untiling them in some brilliand invention for which the world is lim-measurably richer.

The decision in the Wright case ought to lay low the iJea that the invention of a light gasoline motor made the flying machine possible. If that were really true, the man-carrying aeroplane should have appeared twenty years ago. To be sure, the motors of that period were not light; but on the other hand, the long flights that have Iven made in recent years with two, three and even five passengers, proved conclusively that lightness of motor was not the only consideration. The Wright brothers succeeded, not because they built a light motor with their own hands but because they had solved a problem in sero-dynamics which had buffled the best scientific thought of centuries."

The most noted architect in Japan. Matusnosuke Moriyama, who recently made an extended visit to America for the purpose of studying the engineering phases of our modern huildings, in commenting on the skyscraper, says: Generally speaking, there is no architecture in America, in the real sense of the term. When I say that there is no architecture in this country I make a clear distinction between a product of architecture and a mere building There are many immense buildings in New York, but there are few that can he rightly regarded as the products of architecture proper. Most of them are nothing but mere accumulations wood, stone, iron and clay, because they have no artistic value at all. If you travel in Europe you will see many buildings of high architectural value When you look at them they will appeal to you, and the impression you get will be entirely different from that you get out of most of the American buildings. The former impression comes from fine arts, while the latter comes from the mere a cumulation of the building materials put together ur artistically.

Mr. Moriyama attributes the lack of high class architecture here to America's short existence; her lack of delicate aesthetic taste, and her haste in building the nation. In referring to the possibility of a characteristic style in this country, he says. America has not her own school of architecture as yet, but a mere imitation of the French school. In the near future, however, the Americans will have their own They will begin to modify the skyscrapers. They cannot be satisfied with the mere accumulation of big boxes when their artistic nature demands a better type. I can see with a clear vision that the time is coming when there will be many be sutiful skyscrapers in New York with high architectural merit. As the skyscrapers are an American production, America will have her own school, distinctly different from other foreign schools when she has skyscrapers with architectural merit.

The Woolworth building indicates this tendency. There has never been such a skycraper as the Woolworth building. It has beautiful sky lines, hormony and good propertion from an architectural point of view. I do not besitate to say that it has been successful in all respects. When America has such skycrapers as the Woolworth building, the world's online of the American architecture will be entirely different from now.

In architectural engineering America is ahead of all nations of the world. You can find no country with a more scientific system of heating or better building materials. Though I can learn almost nothing about the architectural side of the buildings here, I am expecting to get more benefit in this country from the engineering character of them than in any other country in, the world.—Construction.

Sometimes the Examiner has an intelligent editorial and the real men of brains on the newspaper voice their independent thought that is not colored by the personal amoidon or petsure of Willie Randolp: Horrst, Por example witness the following editorial of yesterday's Examiner concerning syndicated news publications of Julian Hawtherne's life in prison:

DISGRACING A GREAT NAME,

"Following the example of other impudent and shameless janbirds, Julian Hawthorne has been peddling his priron experiences in print. A special investigating commission, appointed by the Department of Justice, has just reported that Julian's "experiences" are mostly lies, which was to have been expected as Julian has been little else than a cheap parasite, trading on his father's honored name, all his life long.

Histhorne's offense was of a peculiarly mean sort. He need his name to cheat hundreds of poor men and women of their earnings, selling bogus securities. He was arrested, tried, convicted and very properly sent to the Federal pentientiary in Atlanta. He served an inadequate term of a few months and then appeared in print wearing the halo of a self-elected matrix.

It is had enough to law commonplace crooks thrust their (ffrontery and shameleseness upon the public. But it is a blacker shame to see the name of a great genius and high-souled gentleman who gave the world. "The Scarlet Letter" thus dagged in the nire by the mean-spi-ical son who brings hip own dishonor to the market in which unscrupulous sensation mongers bid for the printed output of base and ill-smelling samblers."

If the Examiner would apply its own contributions to its own columns and renovate its own sensationalism the public and its subscribers would be much benefited.

Thomos Carlyle said that the best government in the worle would be an also ditte momerchy, provided we could get the best and most capable man for monarch. An instance of the truth of his statement is seen in the government of the Canal zone by Colonel Gotekals and there is a demonstration of what a really capable man can do when he knows his busness, is absolutely honest and eminently fairminded and just

Just now he is offered a number of places in the civil life of the country. The Mayor of New York has offered him the place of commissioner of police of that city. There seems to be a probability of his accepting the place He is said to consider it on the ground that he be given absolute nower. That would mean that there would be no political pulls or vote zetting orginations that would have to be looked It would mean that the Colonel would have a free hand in the organization of the police of the city and with his wide knowledge of administration and military organization he could be expected to make the police force something entirely different from what it now is.

WANT SANITARY LAWS ENFORCED.

The Commission of Conservation at Ottawa has received the following interesting and important resolution from the "Trades and Libor Congress of Canada."

of Canada." "Whereas, the heavy increasing death rate and infant portality, particularly in some of our large cities, is due in a large measure to the unsanitary systems of heating, ventilation and sanitation, thereby causing a serious condition of tife, and

Whereas, the present laws recognized by some of our Provincial and Municipal bodies are in many instances contrary to the laws of sanitation, lakking effectiveness and uniformity, and thereby endangering the lives of the people, and

"Whereas, the question of the health of the community should be the first consideration of all our governing holdes, and as all important scientific and medical bodies declare the urgent nesting of the highest standard of sociation for the conservation of buman life and the adoption of modern systems for all cities and towns.

"Be it resolved, that this Congress erdorse the action of the United Association of Plumbers and Steamfitters in its efforts to establish Dominion and Provincial laws governing the installation of modern sanitary systems of piumbing and heating, and that the officers of this Congress, along with the officers of the United Association, erdeaver to place this important matter before the Dominson Conservation Commission, with a view to their recognizing the necessity of Dominion legislation in sanitation astead of the present unsatisfactory I covincial and Municipal laws governing this matter at present."

The Railroad Commission And The Public.

By John S. Eastwood.

The railroad commission of the state of California should fix all the rates of all the public service companies in the state of California It should be given full power to act as a court of arbitration between the public service companies and the public. It should be given the opportunity to assist the public service companies as well as to limit them, thereby benefitting public as well, and it should perform the function of fixing rates, for by so doing they can assist the public service companies by giving them the necessary financial stability, impossible under the present methods.

By having complete control of all the rate fixing as well as the regulating power it will be possible for the reilroad commission to protect the public service companies from the public and the public from the public service companies. Each needs protection from the other. The stabilizing of the public service companies

will benefit the public.

That each one of the above statements is true needs no demonstration. The growth of public service is recent, has been rapid and is ever ex-

panding and including new functions, and to its rapid growth can be laid most of the faults, real or imaginary, ascribed to public service companies by the public.

A hostility has grown up between the public service companies and the public due to their peculiar relationship, but mainly because of the more or less monopolistic character of the service, also because of the ability of the public service company to deprive the consumer of the service upon nonpayment of bills.

Most people believe and insist that they are honest, and that they are sincere in this belief cannot be gainsaid. but too often they are influenced in their standard of honesty by their personal feelings, which are not a

safe gnide.

The account of the butcher, the baker and the candle-stick maker can he stood off and they have no recourse when heaten out of their accounts, for many others are doing business in the same lines, but the public service company's service is one that cannot be had elsewhere, conveniently, and this is the galling fact

This condition compels a payment for a service that has been rendered at the date of presentation of the account. Too many people look upon this condition as an infringement on their rights. many look upon it as impugning their honesty. People hate to be forced to pay a bill.

Look the matter squarely in the face and you will know that this is at the bottom of any grievance, real or imaginary, you have against the public

service company.

We are all alike, we want what we want when we want it, and what we want is certainly not to pay for a common place service that has been rendered, if we can belp it, but to spend cur money for joy.

We prefer to spend our money for the joys of life, not for the dead horse bills for necessities.

Our joys may be fine calment the bright lights, the music, the tinkle of glasses with a silver incket on the the side, or it may be gasoline and high speed with a highball now and then, or again it may even be sweet charity, or white ribbons and tea, but whatever our joys are, they are the things we delight to spend our money

It is often said that in this world there is nothing certain but death and taves.

All people hate a tax. A tax must be paid or property will be taken for its satisfaction.

A public service is not a tax, but the conditions of our modern life make it come very near it.

Property cannot be take for the nonpayment, the consumer has had the service, and is obliged to get along without it for what he has had unless he pays the public service company has an unpaid account, and both have a grouch.

It is therefore hopeless to think of on entire removal of hoscility.

Some people think the only cure is public ownership.

Public ownership will shift the position of the difficulty, and possibly the distribution of the burden of payment but does not remove the difficulty.

The same conditions as to payment of bills must remain.

It is the last stage, and there is no recourse

People who cry for it will then have not only to pay, but pay more for less efficient service

None of the utopian dreams or rosy ideas work out in practice, principally because all incentive to good and ecoteomical service is removed as soon as it is in the hands of the municipal emploves

What is everybody's business is nobrdy's business.

There is no way to compel efficient municipal public service.

The functions are so many and needs of the municipalities so great, in addition to that of public service, that there is not, and cannot be, property value enough in the municipalities to permit bonding them to acquire all the public service required bv modern ecuditions

That being the case there is no other way, than to have privately owned public service companies for this service has become a necessity.

If they must remain in private ownership, they must furnish service to the public on a reasonable basis.

A reasonable basis is that should be a fair return to the owners of the public service company for the service.

But the determination of what is a fair return is one of the biggest problems now before the public service

the rate fixing.

It is a problem that is intricate and variable, and can only be solved by those having the facilities to determine and integrate all the factors that enter into it.

The rate fixing should be in the hands of the state rallroad commission. for it alone is in a position to get the necessary data upon which to arrive at a falr basis for rate fixing.

The rate fixing should be in hands of the state railroad commission. for it alone has the service of experts to solve the problem of the fair basis of the rate fixing.

The rate fixing should be in the hands of the state railroad commission because it alone is capable of doing so in strict justice between the public service companies and the public.

The railroad commission should not be hampered in the performance of this enormous task by being compelled to hire any but the very highest grade expert talent, for such service to the public is cheap at any price.

The last person in the world that should have the rate fixing power is the councilman of a municipal corporation, because he is in every way unlitted and disqualified for this work.

He cannot do it in fairness to himself, the public or the public service eemmany.

He has not the knowledge, the time, or the ability to acquire the knowledge to enable him to take up the matter of the solution of the problem of the fair rate fixing basis.

He is under political obligations to the voters of his ward, and there is a definite, or implied promise on his part to reduce rates in return for his election.

He is himself a consumer of public scryice and has his own natural inclinations to resist, when he is a fairminded person.

When he is not a fair and bonoralle citizen, and such cases have been k.own, it is impossible to tell where he will stand.

There can be no more unfair condition imagined than to expect a fair adjustment of public service rates from a man who has absolutely no element in his relationship to the public service company, other than that to lead him to cut the rates down.

The question always is, "bow much are the rates to be cut down?" And not "how are the rates to be adjusted?"

The councilman is handicapped by public suspicion of graft if he is fair to the public service company, or is blamed by the citizens for not doing his duty to his constitutents who elected him, if he does not cut the rates down.

The rates for public service have been thus forced down in price at alout the same rate that other necessities of life have gone up

A decrease in rates cannot continue n definitely, for sooner or later it will reach the zero point.

During the period in which the pub-

lic service has been developed, it has been steadily forced down in price, while labor and the cost of living and most all materials have steadily gone

It stands to reason that with two things moving in the opposite directions, the one down the other up, the apparent speed of their departure from each other is rapid and it takes but a short time for them to trans the extremes of separation

The public service companies have been bled till they are inaction.

They have been starved till they are unable to make the necessary improvements, except at 10 nous financial sacrifices, which weaken them still further.

They have been cut to the quick until the very nerve centers are laid bare. They are in the condition of the farmer's horse that was being trained to live on a straw less every day—their

bones are emerging.

The public service has become the big end of husiness, and it stands to reason if the big end of the business is sick, the remainder of the business body cunnot long remain well.

That is what is increasing the army of unemployed

Samson destroyed himself as well as his enemies when he pulled down the pillars of the temple.

The public service companies are suffering from a lack of confidence on the part of the investing public in

their safety and stability.

It is an often heard complaint that they are overcapitalized and that stock

is watered.
This is partly true in some cases, but is largely due to laws made to harrass rather than to help corporations.

All the ploneers in public service know to their sorrow that when a demand had first to be created for the service, all the so-called securities were liquid, and a buyer of bonds was

not an investor, but a bold speculator
If the tide took him in, he was successful, if it took him out he was a
wreck.

Corporations were and are obliged to as a large foundation to meet the condition of growth, and are obliged to make their provisions in the start of the business for future growth, due to the cumbersome comporation laws. but make enlargement of difficult.

There has been forced on them the combination of small corporations, that were organized to neet the small dumands for service in the beginning, ind these companies must be kept alive and fully organized until the list of their ordinations have been met

Thus the bolding company, interlocking directorates and affiliated companies, under the corporation laws, become a necessity

It has been made more and more onerous and afficult to incorporate compraises and to transact corporate busitiess the idea being to harrass and discourage rather than to add corporate investment.

All of these things have made it more difficult to finance, these concerns, recessitating stock borness, but none of the obstacles of law are so potent as the fear on the part of the investing public that they will be ground to powder between the upper and nether millstones of commission regulation

and municipal rate fixing.

This condition of fine-field instabilly may not seem to be of much interest to the consumer of public service but in the end the consumer will yes for the rumous scenario es the public service company has had to make in order to deliver the service.

With the settide condition that would be brought about by the complete regulation of policies and Income by a just tribunal, the finances of the companies should be so useful improved that it would be possible to sell their securities at or near par in the open market, for they would then be sought as a safe invectment, rather than as a speculation, the contract for works could be let to the lowest responsible hidder, and the company and the public through it would have the full value of the economy in cost in the reduced cost of the service.

The condition of the public service company may be justly compared with that of a snake trying to crawl through a hole under a bigh wall, the public service commission punching it on the tail to speed it up, the public on the other side beating its head off

To give good service, t'c public service company must be properly sustained, it cannot be expected to furnish the best service at the best economy under the strain of fear of annihilation of the values of its securities.

And under the present conditions this fear is ever present for there are so many people that would like to use the machinery of municipal competition to wreck the privately owned pullic service company

This effort is now being made in the two largest municipalities in the state and many of the lest citizens have their sense of honor so eclipsed by petty spite, that they think it a square deal.

This desire on the part of the people to get the public service in some lines let to the owner-hip of the municipality is due on the part of many who know they will lave to pay more for poor or service to their antipathy to the public service company.

It is due on the part of meny more who honestly believe on account of typesentations mide to them that there will be a lower me and better service, even though they know the havestment and operating expense will be higher.

It is a hope that some voy, some one else will have to carry their burdens. All the experiments thus far mide with the municipal ownership have proven that municipal public service costs more to somebody than privately

oweed public service.

The reason that in some cases it appears to be cheaper is because of the method of distribution of casts by the bookkeeping methods employed. The burden is not so farry distributed, as the tax deficit must be horne by the property owner, who may not even be

a consumer of public service.

Competition in public service between a municipal and privately owned public service company is unfair and expensive, both to the public service company and the municipality.

It should be made possible by a law giving such power to the lattroad commission as to prevent competition between a municipality and a privately owned public service company.

At least such municipal public servbee as is in competition with privately owned public service in the same line should be regulated by the railroad commission

Another phose of the situation to which the above leads, and that is that competition between regulated privately owned public service companies is not only unnecessary, but is wasteful.

Though the Pederal Government, torough the Sterman law, is trying to stocke a condition of artificial competition by the trust busting methods, its acts so far have not been shown in any occease of efficiency or decrease in cost of the products of the busted trists.

It would be far wiser were a law enacted by the congress to begin at the seat of the trouble and regulate the trists as to their financial stability and the prices of their products to the pible, and thereby make the present log business securities a safe investment for the many, rather than to try to scatter the evil, only to add to the next of their administration and reduce their utilizate for the product of their administration and reduce their utilizate efficiency.

The need of competition between the public service companies in the some market is entirely removed where the financies, the rates and the quality of service are all regulated by a public service commission.

It should be the policy of the public and of the public service commissions to encourage combinations in the same natural field, for this all tends towards and leads to, a reduction of the cost of the public service both by the reduction of the overhead costs, and also by the removal of unnecessary duplication of plant.

Competition and duplication in telephone service particularly is not only utter folly under regulation, it is a crime against the common people. The rimoval of competition should also add to the element of financial security and lead to the economy of extension of service, that can be had only with financial stability.

A sane state regulation removes any cycles for the foolish, impractical and drastic regulations imposed on the development of water power in the forest reserves by the officials of the Federal Government

The people of the states where the public utilities are commission regulated are only hampered by these Federal regulations, and the Federal regulations of water power development should be discontinued in all such states.

These regulations are intended to cover the same jurisdiction as that of the public service commission, but they are unsettling of the financial standing, owing to the revoking clause, and the based on the Federal policy of prevaining combination, which is also had

The people of the state should not be obliged to pay the Federal Government for the use of its awa water, for this is what the forest service charges smount to.

No water power is worth anything to anyone not connected with an exting power company, for the reason that it is the policy of the railroad commission to prevent competition except as a matter of public convenience and pecessity.

This policy is not only right as tending to stabilize the existing companies but it is to the interest of the public as well.

There will be no new water power development in California for general distribution, except by some one or other of the existing companies, and there should not be

As time goes on, more and more of the necessities and comforts of life that are subject to general distribution will come under the head of public service, for there is a constant accretion of inventions that at first are luxuries and finally become by recessities, and their general distribution make them public service.

The rates as well as the finances of the public service companies should be regulated by the railroad commission, because it is the only fair tribunal capable of coming to a just decision as to the relations of the public service companies to the public and the public to the public service companies: because it is the only way that confidence can be restored in the public service securities, and stability given to the investment; because this stability insures to the benefit of the consumer who will thereby receive the maximum of service at the minimum cost; and because the public needs protection from the exactions of the public service companies, and the public service companies need to be protested from the avarice of the public

FIGURING BRICK WORK IN BUILD-ING CONSTRUCTION.

The cost of brick work must, of ccurse, vary considerably owing to the wage scale and the cost of bricks, sand, lime and labor. The rather arbitrary rules figured by masons to ascertain the cost may serve as a general guide in figuring out estimates, but they are frequently far off the actual cost. The orly sure way for taking up the problem intelligently is to study all the various items carefully, and then making estimates for the particular joh hased on this data. If one is considering a job of any size great care should be exercised in verifying these figures.

In making such estimates the cost should be made first on the materials and then on the labor, including all incidental expenses. A rule that is adopted by engineers for brickwork is to figure on 14 bricks per square foot of 9-inch wall, and 21 bricks per square foot of 13 1/2-inch wall, making deductions for all openings. This means an allowance of 7 bricks per square foot for each half-brick thickness of wall.

If we accept this method of figuring we have 48 square feet of 12%-inch wall for each thousand bricks, or practically 2 cubic yards. This frequently taken as the standard unit of measurement. Masons, however, usually figure on 22% bricks per square foot of 12inch wall, which includes all openings

and corners.

In former years manufacturers of bricks had a few standard sizes, and it was much simpler to apply the arbitrary rules for estimating by the thousand; but today the size and thickness of bricks varies considerably, and the tendency is to increase the num-The unit of measurement must, therefore, show wide variations in different localities. The average size of bricks is generally placed at 8% to 8% inches long, 4 inches wide and 214 to 23g Inches thick. But there are plents of bricks both larger and smaller than this size. Some in New York are used as small as small as 7½x3½x2 inches, and as large as 9x414x21/2 inches. The larger size with joints will lay up 800 to the thousand in a wall of standard measurement, and the small size 1100 and more to the thousand-brick measurement.

Variation in Prices of Brick.

Bricks vary in price as much as in size, and while \$6.50 to \$7 per thousand may be the average price at the yard, they may in some instances cost \$8 to \$10 per thousand or seconds as low as \$6 per thousand. The quality of the l ricks must be clearly specified before thy figuring can be undertaken. The cost of getting the bricks delivered varies greatly, depending upon conditions. Usually in cities where brickyards are near the manufacturers charge a uniform price for delivery If shipped by train from the brickyards, the cost of freight, unloading and hauling must all be added to the cost of the materials. These charges may amount to several dollars per thousand in some localities. The conditions of the streets and roads makes an important factor in the situation For instance while a term may haul 1500 bricks as a load across good city streets, the same team could barely haul more than 500 bricks over rough dirt roads of the country. All these fectors must be considered before the contractor can place an estimate yield a profit.

The cost of mortar and scaffolding required should next be taken up. Of course, the amount of mortar used depends upon the thickness of the joints. and the joints vary a good deal in different classes of work. Taking the standard joints as a guide the amount of mortar required per thousand bricks

will be as follows: With %-inch joints, 1/2 cubic yard mortar. With 1/2-inch joints, 3/3 cubic yards mortar. With 's inch joints. 4-5 cubic yards mortar.

The amount of mortar needed being ascertained, it is next wise to propordion the ingredients so that orders can be placed accordingly Lime morar is used today only in the cheaper class of structures and it should never be used in any heavy work, neither should it be used when exposed to great dampness. In engineering structures and in underground work all coment mortar is frequently specified and used. But for the majority of jebs sand and Portland ement in the proportion of 1 to 3, 4 or 5 are used for the mortar. To make up a cubic yard of 1 to 3 mortar there will be required .85 cubic yard of sand and 2 barrels of Portland cement or lime. Usually both lime and cemeot are used with the sand, but these vary considerably in proportoin. One part lime, one part cement to six parts sand is a common specification.

One reason why one part lime is generally added with the cement is that it makes the mortar much easier to work with, and in the cost of labor this amounts to considerable. In the modern efficiency movement attention must be given to such little details. A bricklayer working with cement mortar

has fewer by 100 bricks in an hour than if he used mortar softened with one part lime.

For a cubic yard of mortar then, with sand at 50 cents per cubic yard, lime at 50 cents per barrel and cement at \$1.75, we would have about the following costs with a proportion of 1 to 3 lime mortar:

Sand 0.85 cubic vards at 50c \$0.43: 2 barrels lime at 50c \$1.60; total \$1.43.

A richer and better formula of lime, coment and sand in the proportion of 1 to 2, would have the following cost: Sand, 0.85 cubic yards, at 50c, \$0.43; 1 barrel lime at 50c, \$0.50; 1 barrel cement at \$1.75, \$1.75; total, \$2.68.

For a stronger dement dominionly used for engineering and underground work with a proportion of 1 to 3, we would have this:

Sand, 0.85 cubic yards, at 50c, \$0,43; 2 harrels cement at \$1.75, \$3.50; total, \$4.93

The cost of sand is purely arbitrary and cannot be fixed. It can often be ol tained for the cost of carting, but it rarely costs as much as \$1 per cubic yard. However, this must be considered for each locality, and prices obtoined before any estimates are put in.

if 1000 bricks of \$1/1x4x21/4 inches vere piled up solid without mortar, they would occupy 1.65 cubic yards of space. If the bricks cost \$6.50 per housand a cubic yard of them would cest then approximately \$3.96. This comparison will enable one to see at a glance the relative cost of bricks and In the case of the cement montar. mortar the cost of bricks would be practically the same as the mortar, but for lime, cement and sard mortar the cost of the latter would be about onethird less than the bricks, and for plain lime mortar the difference in the cost is more striking.

Having analyzed the cost of materials, so that the estimator can get clearly in mind the relative amount and cost of the various ingredients of his trade, the labor cost should next be taken up. Labor is the one item that makes brick laying so expensive in some parts of the country. The cost of materials are fairly constant throughout the country, but labor is not. This varies as greatly as the efficiency of the men themselves. High wages do not always mean high-grade, efficient workmen.

Bricklayers are paid all the way from 50 and 15 cents and more per bour. Probably 60 cents is as near the average paid throughout the country as can be made. Hod carriers' and masons' helpers, who keep the bricklayer supplied with mortar and building scaffolds, receive from 30 to 45 cents and more per hour. These rates vary so materially that one can never figure on a job in another town or state without knowing exactly heforeband the union scale of wages prevailing there. It is never safe to assume that the same wages are paid in any two places. Many a contractor has lost heavily on contracts simply through fallure to ascertain in advance the exact scale of wages prevailing in certain towns both for masons, laborers. od carriers and carpenters. Figured on wage scale basis, one might ask how much does labor cost per thousand bricks.

Cont of Labor per W Bricks,

The answer to this depends upon the

ability and efficiency of the men and the amount of work the contractor can the laying of 50 bricks by a man may be considered a good days work, the While workget from them in a day. ing on narrow piers and projections, average on a 9-inch wall may be at the rate of 1100 to 1400 in a nine-hour On 13-inch walls the average day. should run as high as 1200 to 1600 bricks, and on an 18-inch to 22-inch wall from 1500 to 22000 bricks in nine hours per man. On heavy foundations where the work is the simplest, it is not uncommon for bricklayers to averoge 3,000 bricks a day and even 5,000 bricks have been laid by bricklayers when rushed.

On buildings equipped with an elevator and distributing arrangements. the labor of laying bricks may be as low as \$1 per thousand, but on high buildings and narrow walls the labor may run all the way from \$2 to \$4 per thousand. The cost of scaffolding must be considered in all such contracts, for this takes lobor and materials. A carpenter must be employed for scaffold erection at rates ranging from 20 to 40 cents per hour. The carpenters may be withdrawn from some other part of the building to erect the seaffolds. but the charges for their time should be placed to the cost of bricklaving. It hardly pays to get masons or masons' helpers to erect the scaffolds, They do the work clumsily, and oftentimes in such a way that the scaffolds are dangerous. Besides this it takes them much longer to do the work than a skilled carpenter. Hod carriers and mortar men are beter at at their particular jobs, and it rare.y pays to attempt to turn them to another skilled trade even in emergencies.

The cost for laying a cubic yard of bricks in a wall may then be figured out as follows:

Muterials.

459 bricks at \$7 per M\$2.84
Freight on bricks
14 cubic yard sand
Freight on sand
0.22 bbl. of cement at \$2 per bbl :44
1 bu. lime at 20 cents
Total \$4 21
Labor for Cubic Yard of Wall.
Bricklayers\$2.65
Laborers
Carpenters
Unloading materials
Total labor\$4.52
Total materials 4.21
Labor and materials\$8.73

As 1000 bricks of the average size when piled up solid without mortar makes practically 1.65 cuble yards and the amount of mortar used for good joints increases this pile so that the thousand bricks when laid up in a wall equals about two cubic yards, it will be seen that doubling the above es mate for each cubic yard of wall we have the cost per thousand bricks at \$17.46, which includes all materials and labor.

The work figured by the ordinary rules for a snap estimate will be a few dollars under this estimate But a snap estimate is never intended to be more than a guide. Masons generally employ the ordinary rule and then add a dollar or two to make sure of coming out even. There are many things which interfere with the proper working out of the rules. The characer of the wall, time lost through the nondelivery of materials, interruptions of one thing and another, and faulty work of some bricklayers which necessitates tearing down a part of the work, all tend to increase the cost. On the other hand some contractors can stimulate their men to such efforts that they can get one-third more work

out of them. This, however, is something, that is very uncertain, and can hardly be placed in the calculations. Good work is essential to the success of a mason contractor, and he cannot afford to drive his men to the point that details are overlooked. Masonry must be sound, plumb in line and well set throughout to pass inspection, and a fault here and there in the walls may be sufficient to condemn the whole wall or building.

Firms desiring news on special classes of buildings, such ns Banks, Churches, Schools, Hofels, etc., will find such liems all classified sod grouped under proper headings, commencing so this page. These same Items are again repented under "LOCALATIES" in the last part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house. 7 story and base, reinforced concrete. Cost not stated Architect, C. A. Meussdorffer, Humboldt Bank Bldg., S. F. Owner's name withheld This building will be crected on Powell street near Washington and will cover a large ground area. Construction will be practically fireproof. Interior will be arranged for a large number of two three and four room suites. Pine and hardwoods will be used in the interior finish. Plans provide for steam heat elevator service vacuum eleaning, s hot water supply and dumb waiters. All suites will have wall beds and private boths. Bath rooms will have composition floors and tile wainscot. Main entrance lobby and reception hall will be finished in pardwood with ornamental plaster. Entrance will be finished in tile and maride. Exterior of the building will be faced with cement plaster and pressed brick. Plans are being prepared.

SAN ERANCISCO-Apartment house. 2 story and base, frame, \$10,000, Architect, none. Owners, Mr and Mrs. Kohlby, represented by J. Prout, 2020 Turk street, S. F. The building will be erected on the south side of Fulton street west of Broderick, and has been designed to contain four apartments of three and four rooms each. Interior finish will be of pine and redwood. Oak floors will be used in the dining rooms. All suites will have wall beds and private bath rooms. Bath roums will have composition floors and tile wainscot. Automatic water heaters will be installed. Each living room will have an open fire place with tile mantel. Entrance will he finished in tile and parble. Exterior of the building will be covered with rustic and shiplap. Plans are complete and the work will be done by Day Labor under the direction of Mr. Prout.

SAN FRANCISCO-Apartment house. 3 story and base, frame, \$25,000. Arel.itect, William H. Crim, Jr., 425 Kearny street, S. F. Owner's name withheld. The building will be erected on Mission street, and has been designed for stores on the first floor and a numher of two and three room suites on the upper floors. All suites will have wall beds and private bath rooms There will be a steam leating system and hot water supply. Interior finish will be of pine throughout. Bath rooms will have composition floors and tlle wainscot Patent store fronts are specified. Exterior of the building will be covered with rustic, shiplap and cement plaster on metal lath. Plans are now being prepared.

TACOMA, WASH .- Aprilment house, 4 story and base, brick and steel, \$135,-Architects, Heath & Gove, National Realty Bldg., Tacoma. Owner's name withheld. The building will be crected at the corner of 13th and C streets, covering a considerable area. There will be a total of twenty-two suites of from two to five rooms. Interior finish will be of pine and hardwood with some oak floors. Plans provide for steam heat, elevator service. a vacuum cleoning plant and hot water supply. Bath rooms will have tile we ascot and composition floors. Wall beds will be installed in all apartments. Exterior of the nuilding will be faced with pressed back and terra cotta. Plans will go out for figures within thirty days.

LOS ANGELES, CAL - Apartment house, 3 story and base, brick and steel. Cost not stated. Architects, R. D King and E. C. Taylor, Consolidated Realty Bldg., L. A. Owner, Ellas Shedoudy. The building will be erected on a corner site covering an area of 50 by 130 feet. There will be three stores on the first floor and a total of 65 rooms arranged in two and three room suites on the upper floors. Interlor will be finished in pine throughout. There will be steam heat, a hot water system and vacuum eleaning. Patent store fronts and plate glass windows are specified. Bath rooms will be finished in tile and will have composition floors. Wall beds will be used in all apartments. Exterior of the building will be faced with pressed brick. Plans are being prepared and when complete the work will be done by Day Lalor.

Contracts Awarded.

LOS ANGELES, CAL — Apartment house, 2 story and base, brick, \$20,192. Architects, Buchanan & Brockway, 65 North Raymond avenue, L. A. Owner, F. De Witt Smith, Contractor, William C. Crowell, Chamber of Commerce Bldg., L. A. Contract price, \$20,192.

-BANKS.

Contracts Awarded.

REDONDO BEACH, LOS ANGELES CO., CAL,-Bank, 2 story and base. Class A construction, \$17.600, Architect, L. B. Pemberton, Auditorium Bldg, L. A. Owners, Farmers' and Merchants' Bank. Contractor, Carl Lecnardt, H. W. Hellmon Bldg., L. A. Contract price, \$17,600.

BATH HOUSES.

SAN RAFAEL, MARIN CO. CAL-Bath house, I story, reinforced concrete. Cost not stated. Architect. Thomas O'Connor, 104 D street, San Rafael, Owners, City of San Rafael, This work has been mentioned here before when plans were being pre-Working drawings have been completed and received the comroval of the City Trustees and figures are now being called. Bids will be opened on February 9th. Plans and specifications can be secured from the architect. Construction will be of reinforced concrete throughout. Exterior will be faced with cement plaster. Mechanical equipment, modern bath house plumbing and electric work with be included in the general contract.

BRIDGES, DAMS AND HARBOR WORK

SAN FRANCISCO-Woarf construction, timber and pile. Cost not stated. Engineer, Assistant State Engineer, Ferry Bldg., S. F. Owners, State of California. Plans for the construction of Pier No. 54, which will be erected on the waterfront south of the Ferry Building, have re cived the approval of the State Board of Control and are now out for figures. The structure will be similar to several of the new plers with timber piles and heavy timber superstructure. Plans can be secured from the Assistant State Engineer, Ferry Building. Bids will be opened by the Board of Harbor Commissioners on February 11th, An official proposal appears it another column of this issue.

TACOMA, WASH - Bulkhead and wharf, \$100,000. Engineer, City Engineer, Tacoma. Owners, City of Taco-Bonds in the sum of \$100,000 will he voted on at the general election in April for the construction of a bulkhead and wharf at Old Town. Preliminary plans are now being prepared by the City Engineer. Further mention will be made of the work,

SEATTLE, WASH. - Bridges and concrete construction, \$1,830,000, Engineer not selected. Owners, City of Seattle. At a meeting of the City Council an ordinance was passed providing for the submission to the voters on March 3rd of a bond issue in the sum of \$1,820,000 for the construction of bridges over the Lake Washington Canal and the East Waterway.

Contracts Awardea.

FRANCISCO -Wharf office. frame construction, \$2,800. Engineer, Assistant State Engineer, Ferry Bldg. S. F. Owners, State of California, Contractor, Joel Johnson. Contract price. \$2,800. Note: A complete list of the figures received for this work appears under the heading of San Francisco in this issue

CHURCHES

SAN FRANCISCO-Church, 2 story and base, semi-fireproof construction, \$30,060. Architect, John J. Foley, 46 Kearny street, S. F. Owners, St. Emldius Parish, Rev. Father J. Hartnett Working drawings are now being prepared for the church edifice which is to be erected in the newly created parish of St. Emidius in Engleside.

design is in the Tudor Gothic style the building being built in the shape of a cruciform with transcepts. There will be a main auditorium seating in the neighborhood of 600 people, Sunday school tooms and social hall. Interior finish will be of pine and oak with ornamental plaster. Art glass windows and a marble sanctuary will be used. Exterior of the building will be faced with cement plaster. will be called for shortly.

SAN FRANCISCO-Can.ch. 2 story and base. Class A construction, \$75,-000, Architect, W. J. Wythe, Central Bank Bldg., Oakland Owners, Cen-tral Methodist Church, The building will be erected on property adjoining the present Sunday school rooms at the southwest corner of Leavenworth and O'Farrell streets. The main auditorium will seat about 1,000 people. Interior will be finished in pine and hardwood with considerable orna-mental plaster. Steam heat will be installed. Art glass and marble are specified. Exterior of the building will be faced with Colusa Sandstone Plans are nearly complete.

VENICE, LOS ANGELES CO., CAL-Thurch, I story, tower and hase, brick, Architects, C. H. Russell & Co., Union League Bldg., L A. Owners' name withheld. The building will be erected on Innes street and will centain a main auditorium seating 350 people, Sunday school rooms and pastor's study. A hot air system of heating will be installed. Interior finish will be of pine. A tower containing a set of chimes will also be erected. Exterior of the building will be faced with pressed brick. Plans are being prepared.

LOS ANGELES, CAL,-Mission building, 3 story and base, brick and steel. Cost not stated Architect, Robert H. Orr, Van Nuys Bldg., L. A. Owners, Church, Christian Department of Women's Home Missions. The building will be erected on Wall street, and has been arranged for a chapel, offices and class rooms on the first floor, 20 bed rooms on the second floor and six svites of three rooms each on third floor. Interior finish and floors will be of pine. There will be steam heat and a hot water system. Exterior of the building will be faced with pressed brick Working drawings are being completed and bgures will be taken in the spring

Contracts Awarded.

SEATTLE, WASH. -Mausoleum. story, reinforced concrete, \$750,000 Architect, Marbury Somervell, White Bldg., Seattle. Owners, Northwest Mausoleum Co. Contractors, Cornell Bros, Savage-Scofield Bldg., Seattle. Centract price, \$750,000.

FACTORIES & WAREHOUSES.

OAKLAND, CAL - Cil refineries. tanks, pipe line, office, etc., \$150,000. Engineer, Engineering Department Pacific States Oil Refineries Co. 110 Sutter street, S. F. Owrers, Pacific States Oil Refineries, Plans are now complete for rehabilitating the plant recently destroyed by are. Architect Walter H. Parker, Holbrook Bldg., has prepared plans for a wirehouse, corrugated iron construction 200 by 100 feet, and for an office huilding, one story frame construction, which will be erected at once by Day Labor Incouled in the plans for the mechanical equipment are a number of large steel tasks, pipe and pipe lines, pumps, condensots and stills. Practically all work will be done by Day Laber. Full parto ulars can be secured from the San Francisco offices of the owners.

Contracts Awarded.
GRESHAM, ORE-Motor car factory. story and hase, reinfo.ced concrete, \$25,000. Architect, P. Chappell Browne, Mchawk Bldg. Portland Owners, Beaver Motor Car Co., Lumbermen's Eldg., Portland. Contractor, James P Taylor, Couch Bldg., Portland. tract price, \$25,000. Note: This is the first unit of a large plant which is to he erected this year.

COLTON, SAN BERNARDING CO. CAL.-Factory, 1 story, brick, \$14,000. Architect, Lyman Farwell Story Bldg., L A. Owners, Hydranlic Truck Co. Contractor. H. M. Holloway, Wilcox Bldg., L. A. Contract price, \$14,000.

1.08 ANGELES, CAL-Brewery addition, 4 story, brick and steel, \$15,000. Engineers, Mayberry & Parker, Pacific Electric Bldg., L. A. Owners, Los Angeles Brewing Co. Contractor, Harry Brown, 1666 Westmoreland avenue, L. A. Contract price, \$15 000.

FIRE HOUSES AND JAILS.

BERKELEY, ALAMEDA CO., CAL-Fire houses, 3, 2 story and base, frame. Cost not stated. Architect, W. H. Ratcliff, Jr., First National Bank Bldg., Berkeley. Owners, City of Berkeley, These buildings will be erected in North Berkeley, South Berkeley and Caremont. Each station will provide space for one piece of apparatus and sleeping quarters for the men. Interior finish will be of pine throughout Modern plumbing and electric work will be installed. Exteriors will be faced with cement plaster on metal loth. Plans will be completed shortly and figures will be called. Further mention will be made of the work at that time.

FLATS.

SAN FRANCISCO-Flats, 3 story and base, frame. Cost not stated. Architect, Charles J. Rousseau, 46 Kearny street, S. F. Owner's name withheld. The building will be erected on the north side of Pacific avenue near Tayfor street, covering an area of 25 by 62 feet. Plans show three modern dats of five rooms each. Interior firish will be of pine with some elm panels and oak floors. Each living room will have a large open fire place with brick or tile mantel. Bath rooms will be finished in tile and will have composition floors. Automatic water heaters will be installed. Entrance to the building will be finished in marble and tile. Exterior will be covered with cement plaster on metal lath. A pressed brick veneer hase is specified. Plans are complete and figures are being taken for the work,

SAN FRANCISCO-Flats, 2, 2 story and base, frame. Cost not stated. Architect, Earl B. Scott, Humboldt Bank Bidg., S. F. Owner's name withheld. Tiese huildings will be erected on adjoining property on California street near 21st avenue, and each building will contain two flats of four rooms

each and a basement burage. The rooms have been designed so as to give the largest possible amount of space and will receive sunlight from all sides. Interiors will be finished in pine and hardwoods with oak floors in the living and dining tooms. Bath rooms will have composition floors and tile wainscot. Entrances will be fin-isled in marble and tile. Each living room will have an open fire place and tile mantel. Electric heaters and tile mantels will be used in the bed rooms. Exteriors of the buildings will be covered with rough cement plaster on metal lath. Clay tile cornices will be used. Plans are complete and figures are being taken.

. GARAGES.

SAN FRANCISCO-Garage, 1 story and base. Class C construction, \$10,-010, Architect, Mathew O'Brien, Foxcroft Bldg., S. F. Owner, P. J. Mehegan. The building will be erected on the south side of Pine : treet west of Fillmore, and has been designed for a commercial garage. There will be a cement floor, metal window sash and frames and special gasoline storage tenks. Interior will be unished in nire. Besides the storage space plans provide for a large well equipped machine shop. Exterior of the building will be faced with pressed brick. Plans are complete and figures are new being taken.

Contracts Awarded.

SEATTLE, WASH.—Garage, 2 story and base, brick, \$30,000. Architect, nore. Owners, Waterhouse-Sands Co., Scattle. Contractors. Sound Construction and Engineering Co., Lowman Bldg., Seattle, Contract price, \$30,000.

GOVERNMENT WORK AND SUPPLIES.

PROSPECTIVE BIDDERS.

Supervising Architect.

Specifications for work under the office of the supervising architect have been furnished to the following firms in addition to those previously noted in these columns:

Berkeley, Cai., Construction, Feb. 18. J. H Wiese, City National Bank Building, Omaha, Neb.

Grant Fee, San Francisco, Cal

Spaulding Construction Co., San Francisco, Cal.

Fluth & Morton, 180 lessie street, San Francisco, Cal.

Campbell Building Co., Salt Lake City, Utah.

King Lumber Co. Charlotteville, Va. Thurston & Co., San Francisco, Cal. A. T. Spence, 180 Jessie street, San Francisco, Cal.

Frank Gallegher, 180 Jessie street, San Francisco, Cal.

Roberts, San Francisco, Cal.

Frederick J. Amweg, Marston Building, San Francisco, Cal.

Booneville, Mo., Construction, Feb. 11. The Potters Lumber Co., East Liver-

pool, Ohio. W. Bernsing, 612 Massachusetts Building, Kansas City, Mo

Hiram Lloyd Building and Construction Co., 803 Odd Fellows Bldg., St. Louis. Mo.

J. H. Wise, 1301 City National Bank Eldg., Omaha, Neb.

BUILDING AND INDUSTRIAL NEWS. John G. Unkefer, Minerya, Ohio.

Thomas W. Cissel, 220 S. Morket street, Wooster, Ohio.

George W. Stiles Construction To. 1036 Rookery Bldg , Chicago, III

General Construction Co. Galena streets, Milwaukee, Wis. James Corse, 506 Robinson Bldg., Ri-

cine. Wis. Rogers & Kaiser, Peoples Gas Bldg.

Chicago, 111. N H Shields Donn Eldg. Danville.

¥11. Richards, McCarthy & Pulford, Hart-

man Bldg., Columbus, Ohio

L. N. Wyatt, Columbus, Ohio. B. E. Cassity, Columbus, Ohio.

King Lumber Co., Charlottesville, Va. W. H Fissell & Co., 1133 Broadway. New York City.

Watla Watla, Wash., Files.

The contract for installing book and file case in the U.S. post office Walla Walla, Wash., has been awarded to Davis-Kaser Co., Walla Walla Wash . at \$514.92

Pearl Harbor Dry Dock Investigation. When Secretary Daniels appears be-

fore the House Naval Committee, he will be prepared to give some interesting information concerning the investigation which has been conducted concerning the disaster which overtook the big dry-dock at the Pearl Harbor naval station. The best obtainable information shows that the accident was due to the failure to place piles of sufficient length to withstand the pressure. The question before the naval committee has been one which aims to fix the extent of the responsibility of the dock builders on account of a clause inserted in the contract making them responsible to a certain degree. The Navy Department authorized modifications in the design. and it must be determined whether the government is sufficiently responsible in the matter to warrant payment to the contractors of a certain sum of money. It is desired that the work shall be completed by the builders who have undertaken the project. Already one year's work has been lost on acccunt of the accident and the delay to make the necessary investigation and to adjust the claims of the contractors. It will also be necessary to have an additional appropriation of what amount remains to be determined. That is one of the aspects of the situation which will be brought out by Mr Daniels in his hearing on the subiect.

Phoenix, Ariz., Files.

The following bids were received by the custodian, U. S. post office and court house, Phoenix, Ariz., for installing filling equipment in the U S. weather bureau, Phoenix, Ariz.:

The Shaw-Walker Co., Muskegon, Mach., \$87.20.

Automatic File & Index Co. Green Bay., Wis., \$91.25.

The Globe-Wernicke Co. Washington. D. C., \$102.50. Dorris-Heyman Furniture Co. \$126 -

The Canton Art Metal Co., Canton, Ol 1o, \$147.90.

Art Metal Construction Co., Jamestown, N. Y. \$158.

The Van Dorn Iron Works, Cleveland, Ohio, \$201.60.

Civilian Navy-Vard Management.

There is an animaled tevival of the discussion among members of the House Naval Committee of legislation which shall touch in a vital way on the management of navy yards. When Societary Daniels appears before the committee in the course of the next week or two he will be asked to give his views on the subject. He has been looking into the problem and has had the senent of the advice of Mr. E. II Evans, formerly an officer of the naval construction coups, who resigned to accold a position with a shipbuilding oneern on the we troust. Mr Evans, Who is regarded as an expert on orgenization and management, has not only talked with Mr. Daniels but has such members of the House Naval Comunitiee, and is understood to be at work on a measure which will provide for civilian management of navy yards. Some of the members of the committee who were on the inspection trip of navy yards last summer entertain decoled views as to the need of a change in the system, but they have found that there is by no means unanimity of opinion entertained by officers of the stivice and others who may be regard. ed as in a position to know what is best to be done. Mr Daniels has not signified his own views and will probably withhold his opinion until he appears before the naval committee.

Reno, Nev., File Case.

The following hids were received by the supervising architect, Treasury Department, Washington, D C., for furnishing one steel file case for the U. S post office at Reno, Nev.:

Typewriter and Office Supply Co., Washington, D. C., \$311.85; 60 days.

item1 900 feet; 2, \$18,000. L. L. Lent, Bremerton, Kash, item 2, \$12,936.

The North Coast Contract Co., Portland, Ore., item 1, \$592 feet.

Fortifications for Guam.

No estimates were prepared this year by the War Department for fortifications in our insular possessions, excepting in the Howaiian Islands and the Philippines, but attention is being given to the Installation of defenses at Guam and Guantanamo. Nothing has been recommended for Alaska there has been no study by the military officials for defenses for the territory for the last two years. At the suggestion of the Navy Department a survey is now being made of Guam, the Navy Department having in contemplation the establishment of a coal and oil depot there. There has been no approved project made for the defense of Guam, and the problem is yet to be teken up in detail by the War Department, which has, however, taken un the Guantanamo project and given it very careful consideration. The development of Guantanamo defenses depends largely upon the policy of Congress respecting the increase in the focilities for the naval base at that place.

Navy Coal and Fuel-Oil Stations.

The Navy Department has completed its plans for next year's expenditure of \$500,000 if Congress appropriates that amount for the development of coaling stations and fuel-oil stations for the navy. The naval general board has submitted a report to the Secretary showing in what direction and relative order of importance the money should be expended. This is as follows: 1, contingent, \$20,000; 2, San Francisco, storage, \$100,000; 3, San Diego, storage, \$:0,000; 4, San Diego, coaling tower, \$45,000; 5, Puget Sound, storage, \$105,-000; 6, Norfolk, storage, \$150,000; 7, Melville, storage, \$20,000, total, \$500,-060. The most important item, considering the amount involved, is that for three additional 7,000-ton fuel-oil tanks contemplated at Norfolk, increasing the total storage at that place to 26,000 tons of fuel-oil. The navy is maintaining a small supply of coal at San Diego (about 10,000 tons at this The department desires to increase this to 50,000 tons stored in the open. At present there are no mechanical appliances for handling coal. The installation of the tower will provide means for handling the coal rapidly and economically. The station is now provided with a suitable wharf which the tower can be crected. Cool will be handled to and from the storage pile by small cars. At the present time the navy has no oil storage in San Francisco Pay or at Mare Island. except a small storage at the latter place for industrial purposes. The matter of a suitable site is under investigation, but it is uncertain whether a preper site can be found on land belonging to the department. The commandant of the Mare Island yard has prepared a comprehensive report on the existing commercial facilities in San Francisco Bay and recommendation for the location of a naval plant.

Anvaja Indian Reservatian, Bridge,

The contract for the construction of a steel nighway bridge across the San Juan River, Navajo Reservation, N Mex., has been awarded to the El Paso Bridge and Iron Co., El Paso, Texas, at \$44,725.

Sau Francisco, Cal., Repairs,

The contract for repairs to ram elevator at the U. S. Mint, San Francisco Cal., has been awarded to Otis Elevator Co., Washington, D. C., at \$570.

Coal Barges to be Built at Navy Vards, Secretary Daniels has taken an imnutiant sien in the line of his policy to furnish as much work as possible at the navy yards. He has obtained estimates from each navy yard on the Atlandic and west coasts and has now authorized the construction of 22 500tor, steel coal barges, of which from two to four will be built at each of the yards. Judging from the cost of similar barges built hitherto under contract, the expense of this work will amount in the aggregate to \$440,000 it being estimated that the cost of e, ch barge will be \$20,000. barges will be used for coaling vessels of the fleet and will be added to the list of some thirty similar craft acquired by the Navy Department by contract Recently the Seattle Construction and Dry Dock Company completed nine of these barges, and the Cramp Shipbuilding Company completed ten of similar design. The new steel coal harges are intended to replace the old wooden barges which have been used and which are now kept for service as occasion requires at the Norfolk and Mare Island navy yards. In the line of possible new construction at navy yerds are the two 15-knot 35-foot motor hoats purchased under contract by the Navy Department for experimental purposes. One of these boats has been sent to the Montana to be used as a tornedo cheser. The other has been sent to the Utah to be tried out as a commanding officer's boat. Upon the reports received will depend the adoption of this type of motor beat as a standard. In which event it is possible that similar craft will be built by the Navy Department.

Interrupted Building In the Philippines.

The instructions from the War Department to discontinue the construction at Camp Stotsenburg, in the Philprines, found several of the officers' quarters practically completed as far as the first story. In consequence the buildings were finished at this point. making them one-story buildings instead of two-story edifices. The design of the building is quite satisfactory, as the one-story bungalow type, with a perch all around the building, is the type of residence most desirable in the chmute of the Philippine Islands. It is practically impossible to construct the larger buildings in the Philippines within the limits of cost fixed by Congress, but it is believed the buildings of the bungalow type-that is, of concrete frame and filled in with wood or compressed concrete blocks with roof properly ventilated -can be built within the limit. Designes of such bulldings have been forwarded to Washington in connection with the werk contemplated at Fort McKinley.

-HALLS & SOCIETY BLDGS-

CITY AND COUNTY OFFICIALS TO WRITE STATE INSURANCE, STATE FUND MAKES COMPENSATION-INSURANCE ACCESSIBLE TO ALL,

One of the purposes of the Legislature in creating the 8-te Compensation insurance Fund was to make industrial insurance accessible to the smallest employer in the remotest modes and corners of tre State, and with that end in view it was enacted, that—

"The Commission shall furnish solvebules of rates and copies of form of policy to the Clerk and to the Tleasurer of every County, City and County, and City in the State, and it shall be the duty of every public officer to whom the foregoing may be furnished to fill out in-urance Fund applications for compensation insurance in such Fund."

The Commission is preparing to probin every city and County Chek and Teasurer with the necessary manual of rates and elassifications and printed matter, in order that they may be enlabled, for the convenience of the Emphage seeking insurance to comply with the basis.

Contractor, James P. Taylor, Couch Bldg., Portland Contract price, \$25,000. Note: This is the first unit of a large plant wilch is to be erected this year.

PLAN CITIES TODAY—SAVE MIL-LIONS TOMORROW.

That the citles of California should now plan wisely for their future growth, in order to save the wasting of countless millions hereafter in costly and yet makeshift reconstruction, is believed by the University of California, and so the Dulverity has established a new course of lectures on "City Planning," to interest its students and the public in this great world mevement. Fifteen experts in various fields will come to the University to discuss the problem of how citles may also wish with the control of the

That there will be two million people in San Francisca and two million in Los Angeles before another generation gues by, and that the other chief towns and cities of California are destined to grow in some such surprising way, is predicted by competent and conservative experts. So Its is suggested by the lecturers of this course that as a matter of plain business self-protection California towns should now, while land is cheap, acquire ample areas for schools, school gardens, public playgrounds where young and old may have healthful outdoor recreation, parks. plazas, agricultural school farms, and civic centers; provide for barbor and transportation problems, plenty of room for street-car and railway facilities, factory and warehouse areas; broad traffic streets, linking different portions of a scattered community, provision for both express and local street-car service between neighhoring regions, preservation of natural landscape features, etc.

It pays to do city-planning with foresight, the University holds, for such work not only adds to the comfort, health, and convenience of the inhabitants of a town, but actually saves the community enormous sums, through preventing the excessive cost of making changes when it is too late to do things economically and well.

Civic beauty is only one side of the city planning problem—on infinitely important aspect is to protect the health, the cemfort, and the well-health go the home-dwellers of future generations. Wise building restrictions need to be developed. Every community needs a city-planning commission which shall see to it that the town develops wisely instead of just "happening," which protects the beauty and the comfort of the community, and foresees future needs.

This city planning course is to be given under the joint auspices of the students' League of the Republic, an organization devoted to study of civic problems the Architectural Association, and the University Extension Division. It is expected that several hundred students will be regularly enrolled for the course and that there will be an attendance of large numbers of visitors. Among the speakers will he Professor Thomas H. Reed, on the marvelous expansion of city life in recent generations; Dr. Werner Hegemann of Berlin on problems of cityplanning; John Galen Howard, Director of the School Architecture, designer of the Hearst Plan of the University and of the new civic center of San Francisco, on the art of city planning; William R. Wheeler, Manager of the Traffic Bureau of the San Francisco Merchants' Exchange, on railway facilities; City Manager M. M O'Shaughnessy of San Francisco or, streets and traffic, including municipal transportation; Charles Gilman Hyde, Professor of Sanitary Engineering 'n the Univer sity, on water and sewer systems and methods of street construction; Charles H, Cheney, the architect, on the zone system of city planning and special features in the planning of business and manufacturing districts; Dr. Jessica B. Peixotto, of the State Board of Charities and Corrections, on the garden city, the teneme, t. and other experiments in the housing problems: Duncan McDuffie, a pioneer, in the artistic development of restricted residerice districts in Berkeley and in San Francisco, on wise building restrictions for residence quarters in cities and towns; George W. Dickie, Superintendent of Playgrounds in Oakland, on the outdoor and indoor recreational facilities which cities ought to provide for their citizens; J. W. Gregg, Professor of Landscape Gardening, on gardens-public and private-and planning; and John J. Denovan, Supervising Architect for Oakland, on what a city can do in the way of planning its school houses so as to use them for vastly wider community purposes than were contemplated in the old-fashioned plan of opening them a few hours a day just for keeping school; and lockthem up useless most of the time.

CALIFORNIA HIGHWAY COMMISSION BULLETIN,

A \$5.500,000 guarantee of faith in the value of the State Highway system has been furnished to the State by counties which have subscribed for highway bonds in excess of that amount in order

to assure prosecution of the highway work in advance of the opening of 1915 expositions. The State Highways bonds bear four per cent interest, and under the law must be sold at par and on the contract of the sold at par and on the property of the sold of the

When the lack of a market for low rate bonds promised to continue, the Highway Commission appealed to the supervisors of countries to take supervisors of countries to take advantage of an act passed by the last legislature permitting investment of county funds and reacting of State bonds. In return for the vocuperation the Highway Commission agreed to expend the sums received within the limits of the countries fundations.

About thirty counties have responded, permitting a total of \$5,719,500 of highway bond sales, with about \$1,000,-800 additional informally pledged. Most of the counties have merely taken care of the shrinkage between the par value and the market demand. As the State maintains the State Highway the saving to the country in maintenance in practically every instance is as great in the first year as the depreciation loss which the county stands to make the bonds saleable Several counties with considerable money on hand are keeping the bonds. thus bringing an interest return of 4 per cent in place of the 2 per cent which the funds have been drawing from the banks. The depreciation has averaged less than 5 per cent.

The counties in which sales of or pledges to purchase the State Highway Londs have been definitely made are as follows, according to a list given out by the State Highway Commission: Los Angeles \$695,000; San Diego \$557,000; Alameda \$500,000; Solano \$390,000; Contra Costa \$300,000; Colusa \$290,000, San Luis Obispo \$250,-000; Sinta Clara \$228.00) Glenn \$218 -500; Kern \$200,000; San Mateo \$200,000; Orange \$200,000: Imperial \$200,000 Fresno \$150,000; Marin \$150,000; Sacramento, \$150,000; Santa Barbara \$141,-0.000 Tuolumne \$125,009; El Dorado \$150,000; San Bernardino \$105.000: Riverside \$100,000; Humb.cldt \$100,000, Stanislaus \$75,000; Santa Cruz \$75,000; Siskiyou \$50,000; Monterey \$45,000; Mendocino \$45,000; San Eenito \$25,000; Shasta \$5,000.

This co-operation the Highway Commission believes will make possible the completion in time for the 1915 expositions the greater part of the coast line between San Diego and San Francisco and north to Eureka, the west Sacramento valley highway from Red Buff to Benicia, and a considerable part of the route through the San Joaquin and Sacramento valleys between Bakersfield and Red Buff via Presno, Sacramento and Maryaville.

NEW MINING BUREAU PUBLICA-

In response to a demand not only from residents of California but from prospective investors and others interested in the mineral resources of the State throughout the world, the State Mining Bureau announces the publication, for free distribution, of Bulletin No. 65 containing the mining laws of California.

A working knowledge of the law

governing the location, development and acquisition of mineral land is necessity to all who are in any way connected with mining and the above bulletin is presented with the idea of following out the principle which State Mineralogist Hamilton is pursuing in all branches of the work of the mining bureau, i. e., the advancement of the mineral industry in all possible ways.

All statutes and amendments including those enacted by the State Legislature during the 1913 session are contained therein as well as the U.S. mining laws ond various Court decisions relating to mining.

As an appendix are included the full text of the "Blue Sky" law and the Water Commission Act which were passed by the last legislature but are imperative at present having first to go before the people under the referendum

It has been deemed proper to include the "Blue Sky" law as its action if it becomes operative will have considerable effect in suppressing illegitimate mining schemes, and will on that account accomplish much toward putting the industry on a sound footing the industry on a sound footing and establishing a confidence in mining which is merited in the great majority of cases, but which is often lacking because of the fact that unscrupplous persons have used the industry as a means of perpetrating frauds upon the public.

The Water Commission act which covers the regulation of the waters of California under state jurisdiction has been included because the use of water is vital to the miring industry and it is to the miner's advantage to know that their interests in the use of water may be fairly aljudicated and protected.

Those wishing a copy of this bulletin will be supplied upon addressing, F. McN. HAMILTON

State Mineralogist

Ferry Building, San Francisco, Cal.

REVIVAL OF CHINA CLAY IN-DUSTRY,

Development of the Cabas clay industry in the United "Catas's expected to progress more ra filly as a result of advancing prices for English clay. The industry has had a somewhat che kered career under the influence of high customs duty, law duty and no duty.

Criff the Wilson bill, eighteen years

ago, put clay on the free list, the duty was \$5 per ton. American clay never was in strong demand among potters, who found fault with the carelessness in washing and preparation. But producers were advancing and attracting attention from potters, when duty free clay out all of them except the Brandywine Summit company out of business. The Payne-Aldrich bill corried a duty of \$1.25 a ton, and quarrying of the clay again took on an industrial aspect. There was brought from England last year 278,276 tons of white China clay. of an invoice value of \$1,629,105. Under the Underwood bill the clay will come in free, and already British products have announced an advance in price They give as their reason a strike of their workmen, in progress eight weeks, which, it is asserted, will force them to increase wages. "The Ameri-

can tariff increasing British wages," is the view of a clay expert

It is recalled that when the Wilson bill put clay on the free list the price abroad went up \$2 a ton English clay laid down in Trenton co to the potter about \$12.50 a ton. American clay it is stated can be delivered at a lower cost and as producers are conforming to the potters' idea of washing and preparation, it is predicted the producing of white China clay is destined to become an industry of some magnitude.

R. Griffen Miller, treasurer of the Newark Clay Company, while in Philadelphia recently on business of the company, said he did not regard removal of the duty as having any effect other than to figure in the diminution of the government revenue

THE PORTLAND CEMENT INDUSTRY

According to returns received by the United States Geological Survey up to January 12, 1914, it is estimated by Ernest F. Burchard, that the quantity of Portland cement in nufactured in the United States in 1913 was approximately 92,406,000 barrels compared with 5.435,096 barrels in 1912, an increase of about 9.967.500 barrels or 12 per cent. The estimated shipments of Portland cement during 1913 were 88.853.-000 harrels, compared with \$5,012,556 barrels in 1912, on increase of about 3,840,400 harrels, or 4.5 per cent account of a large surplus of production over shipments stocks of cement at the mills apparently increased more than 45 per cent, or from 7 \$11,329 barrels in 1912 to 11,375,000 barrels of the close of 1913. In 1913 the relations between production and saipments were the reverse of those for 1912, when shipments exceeded production. It may Le necessary to revise considerably the estimates of stocks, but it is believed that these figures for production and shipments are very close to those that will be shown by complete returns from all producers

Although few definite statements as to selling proces are at hand it is evident that the average value per barrel was appreciably higher than in 1912 Increases of 10 to 25 cents a barrel are reported from several plants in the Central and Eastern States, but there were slight decreases reported from a few plants in the Rocky Mountain dis-

Two new plants, both in Washington, eere added to the list of producers during 1913

The following table gives the estimated production, shipments and stocks for 1913 and the actual production shipments and stocks for 1912, together with the per cent of change of Califorria and Washington:

Estimate Change 1912 1913. Per Cent Froduction 7,336,715 \$ 916,600 Inc. 21.5 Shipment 7.531,927 8,072,000 Inc. 7.2 Stock 606,959 1,511 000 Inc. 148.9

HUMORING THE ARCHITECT.

In "sizing up" the engineer in whose lands final approval of his work rests. the contractor becomes a shrewd judge of human nature. The methods of some engineers are radically different from those of others, and this has a marked bearing on the cost of construction. Nothing adds to the price of a bld like uncertainty whether it be in the temperament of the engineers or in unknown construction problems

In one work of construction where a number of local firms were invited to hid on a certain large holiding for an architect who was well known to rule in favor of his ellent in every instance. brespective of the merits of the case, successful bidder, after figuring the full measure on all questions, added this item: "For humoring the architect, 10 per cent of the contract price." It is safe to presume that all other competitors placed this contingency at a higher figure. Such as man could not get a reasonable bid from any one who knew nim .- Engineering Record

A LOFTY DRAWBRIDGE.

A draw bridge, which, when, open, towers above the Calumet river in Chicago to the height of a twentystory skyscraper, has neen built by the Baltimore and Ohio Bailroad. The length of its span, 230 feet, breaks all previous records for draw bridges of the 'bascule" or tilting type. The bridge is raised and lowered in exactly the way that the wooden gotes at a railroad crossing are operated by the flagnan to prevent vehicles from passing the tracks when a train is approach-

The structure contains pounds of structural steel, 305,000 pounds of machinery and 1100 cubic yards of concrete, employed as a counterweight. In spite of its ponderous mass, the bridge is so delicately balanced that it can be raised and lowered as readily as a child tits his "seesaw '

The average of four complete operations gave a raising time of 72 seconds and lowering time of 67 seconds, with the wind blowing from 65 to 11.5 mlles per hour. When subjected to an unbalanced loading of 8860 p unds of ralls, the bridge was raised in \$3 seconds and lowered in \$6 seconds by two motors. -Engineering Record.

MACHINERY HOUSE VEEDED VENEZIELA.

[Censul Thomas W. Veetter, La Guaira] Although there is much standing timber in Venezuela, son c of it not accresible to roads or water transportation. A great part of the balance is in unhealthful surroundings For these reasons the production of merchantable lumber in Venezuela is not greater The importation of machinery for sawmills is not great, and no great increase in the demand can be looked for. Within a few days I noticed advertisements for the auction sale of a large woodworking plant with its machinery which had been idle for a long time

I regret that there is not in the entime country a distinctive machinery house, one which can justall a plant and nurse it along into successful operation. Were such a house in existence in Caracas, with a competent and practical man in charge, the sale of machinery of various kinds could undoubtedly be increased.

I have recently received a number of inquiries from concerns wishing to sall machinery in Venezuela. I centure to offer the suggestion that several American manufacturers who desire to sell their machinery in Venezuela unite in sending a joint representative to Caracas. A dozen or twenty different lines might be represented. The man in charge should be practical, able, and fit to oversee the installation of the plants he sells and to correct errors in their operation. He should also be able to help the proposed user of machinery to get other machines or apparatus he may need to complete his plant as he desires. He could keep in touch with the industrial development and instantly follow up mything that promised business for the firms he represented.

Were the proposed bayers confident that they would find some one in the country who had a real interest in seeing that the machinery they bought rendered good service and also could help them to that end, they would be more free to luy. For example, a prominent Venezuelan interested in menufactures here hads toat his plant is not operating satisfactorily. He is going to visit the United States suon to find out how he can improve his plant and why his machine; do not work well. Now, a properly organized and managed machinery nouse, such as I have outlined or suggested, would have seen that the factory dia operate well, and the owner would have been spared the expense of a long trip to find out what was wrong. This plant is not in the woodworking line and I mention it only to emphasize the point. I also believe the machinery did not come from the United States,

Proposals.

NOTICE TO CONTRACTORS.

SEAJED BIDS Will be received by W. McCure, State Engineer, Capitol Building, Sacramento, Casifornia, up to mad including twelve o'clock, moon, Tuesding, Waren 3rd, 1911; Sala bids and read for furnishing all plant, materials and lator for the following work in the State Capito: Building at Sacramento, California, in accordance for, copies of which may be obtained on application to the State Department of Engineering, Sacramente, California, Bids will be received. SEALED BIDS will be received by W.

FIRST—For the construction and erection of two new passenger eleva-tors, with equipment for same, in the State United Building. Separate bids must be submitted covering allowance for all old mechanical and electrical

for all old mechanical and electrical equipment, same to be removed without expense to the State SECOND—For remodeling elevator grilles in the State Capitol Building, THIRD—For the construction and THIRD—For the construction and erection of pneumatic door operating devices and equipment tor same, for

uevices and equipment for same, for two new passenger elevators in the State Capitol building. Cash, a bidder's bond, or a certified check in the sum of ten per centum (10%) of the amount of the bid must

(10%) of the amount of the ma muse accompany each bid. A deposit of Five Dollers (\$5.00) will be required on plans and specifications, the deposit to be returned famediately callons to the State Department of Engineering. Sacramento, California, in good candition gineering, Sac good condition

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and bestieve and be of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Catarhand Cold in the Head. It makes you micrable, doesn't it? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it mitly oug et the Clover Leaf Gatarh Remedy, and use it. It will relieve you, and you'll wooder why you had not used it cooner. We are so positive that this will relieve you of your Catarh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

" " " " 11/2 inch to 21/4 inch

Roofing Gravel to 1-2 inch Cobble Stones for Bungalows.

With a Modern Equipped Plant at Niles We Are Able To Give All Orders PROMPT ATTENTION

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton
Hotel, in Philade'phia,
has four Electric Elevators and six Electric
Dumbwaiters, furnished by the Otis Elevator
Company.

ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton,

New York

The Ritz-Carlton, Montreal

The Plaza, Buenes Aires

Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Carlton, London The Ritz, London The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100 per cent correct.

OTIS ELEVATOR COMPANY

Stockton, North Point and Beach Sts. San Francisco

Offices in all Principal Cities of the World.

OFFICE PACIFIC TEL & TEL CO.

Basement walls 22 ft. high. Cement plastered on inside against severe water pressure. Plaster water-proofed with Imperial Water Proofing.

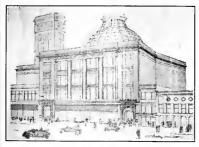

Benj G. McDougall, Architect.
ST. LUKE'S CHURCH, S. F.
South and east cement walls waterproofed with Imperial Water Proofing
Color effect produced with Imperial Concrete Finish to match stone work
of street fronts.

Frank Neidick

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

There is quite a good deal of discursion at present over our educational system Dr. Burk's publication on "Lockstep Schooling" and Superintendent Hyatt's answer has provoked some newspaper notice at least and the important question of American schools is brought into print.

That there are many defects in the school system is evident. How best to remedy them is a difficult problem. And it should employ the best energy of the best minds of the country which it does not at the present time. And the chief fault of the schools is that they do not offer sufficient opportunity for men to enter the profession. Positions of any reward depend entirely upon political favor in this country Hence it is that the politician gets whatever there is worth while in the public schools and the man who has devoted his life to the work soon finds that he is in a profession where he can only make a bare living and where he may be out of a job at any time and nothing else to turn to

The school teaching profession in this country is occupied almost entirely by women. The schools in the city particularly are crawded. Positions are usually obtained through political in-flicance under our system. So that merit in most cases is a second consideration.

What the schools of this country need is more opportunity for men to aspire to the profession of school teachers. Enlist the best minds of teachers. Enlist the test minds of the country in the active work. Let them work out the problem that confrom what confrom the mind out the best methods of astanding the hielast to be sought. As it is now falls and fakes are prevalent. Someone starts with a royal road to coveration that has about as much merit as a patent medicine fake. It gets the public attention and then is soon superseded by some other scheme.

Fundamentally the laws of the mind development are pretty well determined. The main thing is to apply the proper method for the development of each individual. No one method will do it anywhere it depends largely upon the personal work of the teacher. Hence the great need is to improve the crevice by making the rewards of occupation commensurate with the ability which is sought to I cengaged.

Reports slate that there is quite a building boom in the town of Bethle-hem, Palastine. From the town that was the birthplace of the lawly Carpenter, that became the greatest teacher of the world, the fact that it is again being built up after the lapse of 1000 years is of especial interest to

builders. How much leve builders' tools changed in the interms'. What advance has joinery and architecture unde? What difference is there in the churches that adorn the great capitols of mediacyal Europe as compared with the temple of Jerusalem where Christ dreve the money changers into the street?

The modern progress of the chanical age is invading the ancient lands that have long been sleeping and dead. It is only a questi n of time till medern methods will again conserve the waters of the Tigris and the Euphrates and modern cities will be builded on those now crumbled into Already irrigation is being spread along the lower Nile by means of pumps that use the sun's rays for power. And from the west are coming the modern inventions that will place the old lands on the plane of progress of the Western world.

As the Workmen's Compensation Act is something new in this State and is borne in a great measure by the building trades as an additional cost on the business, its provisions have been the subject of a very wide discussion. Relative to the reports that have been perissistently circulated about it the Fresno Republican has this to say:

It is evident that insurance companies doing business in California are conducting a concerted campaign of misrepresentation regarding the workmen's compensation act. Reports have come, for instance, within a week from Southern, Central and Northern California, of the most preposterous statements in regard to the requirements of the new law, and in every instance investigated, these statements have been traced back to insurance agents. Sometimes, these misrepresentations have been accompanied with direct denunciation of the law as legislation," and even with suggestions that Progressive business men show their resentment against the law by registering as Republicans and opposing Governor Johnson. We even know instances where this political effort was successful-and in every case, it was by attributing to the law some provision which, in fact, it does not contain. The campaign is too widespread to be merely spontaneous, and the same misrepresentations crop up from so many different places as to make it certain that they have a common inspiration. If ten scattered men all tell the same truth, it does not follow that they have consulted and agreed to do so. But when hundreds of men, scattered too far apart for personal consultation, but all employes of the same interest, tell the same lie, it does follow that they are proceeding under common instructions.

It is, of course, impossible to know just which particular misrepresenta-

tion has been made to each reader, so as to give a specific explanation of that one, and if all the distortions of the law were denied teven if it were possible to find them all out for denial) the denial would be so voluminous that no one could read it through. But just on general principles, if you hear from an insurance agent, or from any one who gets it from an insurance agent, a statement of some provision or application of the compensation law which strikes you as unjust, you are fairly safe in assuming off-hand that there is actually no such provision in the law. Practically all the attack on the law which actually are not and never were in it.

The law is denounced as "freak," in spite of the fact that it already exists in every European nation except Turkey, and was about to be introduced even there by the Young Turk party. when it was interrupted by the Balkan Certainly we shall not be going dangerously fast if we catch up with the procession just one step ahead of Turkey! The law is denounced as unjust because it is said that a householder might be saddled with the life support of some tramp whom he had employed to clean the sidewalk, and had fallen and permanently disabled himself, just or unjust, that is the law in England-but not in California. Casual employes are not It is said that a small included farmer, with his life savings invested in a new place, might have to lose it to compensate the death or support for life some chance laborer who might happen to be injured. This is, in fact. the law in Germany-but not in Cau-The farmer in Callfornia is exempted, and if his employe falis and paralyzes himself for life, that employe is to make his own living and bear all the loss. But even if the farmer were included (as some day be should be; the element of risk is removed by insurance, just as it is in the case of a tire hazard. Weird tales are told about the liability of the owner of a building for damages to his lessees. customers or visitors-all of which falls outside the scope of a law for the compensation of employes only These are only a few of the tales. If you hear others, don't believe them until you have first written to the Industrial Accident Board, or Inquired of some disinterested person who knows And don't let anybody fool you into thinking that this law, which is now a commonplace of civilized legislation all over the world, is "frenk," merely because it is new in California.

The President has lifted the ban on the shipment of arms to Mexico. This Huerta claims will haster a war of extermination in the Southern republic. He certainly has great reason to complain as he gained ascendency by assistantion of his chief and bobbs his power by being able to get arms while his adversaries can not.

The only question that concerns us is whether after Hucta's downfall there is anyone else strong enough to keep the peace and protect lives and property in the war ridden republic. And no doubt that has been the sole consideration of the President. However, the President has shown life apacity to deal with all questions and he is not the man to take any momen-

tous action without mature consideration. He has, no doubt, taken this action after most mature consideration being pretty sure in his own mind of the probable outcome.

The Chronicle is much concerned over the fact that the income tax is to make Americans pay the cost of goverpment while foreigners formerly paid it, stating the old, old follary that the foreigner paid the price on the protective tariff. Just as if the importer did not have to add the tariff to his cost price and charge the consumer accordingly.

How anylody with intelligence enough to sit up can be made to believe such statements is hard to realize. The only difference is that income tax is direct, everylody knows what it is, and it has to be paid by those who can afford to pay taxes. In the tariff tax it was indirect and leviced upon everybody who bought anything that was imported or manufactured in this country, and in many cases it fostered the building of glgsantic mongolies that made rich a favored few

Every city suffers from slack work a period of unemployment every winter. There is little demand for unskilled labor as a rule at this senson of the year and many of the trades go through a period of depression. Particularly is this true of the building trades which depend in a large measure upon favorable weather for their full employment. The result is that men are laid off and many families that have saved up a little for emergencies are brought to actual want.

This condition seems to be inevitable. It is so in some degree, particularly in some trades. But in some cases it can be remedied to a great degree.

Mr. L. D. Brandels of Boston, who has a habit of scrutinking bad conditions to see if they cannot be improved, has recently called attention to the achievement of a Boston show manufacturer, W. H. McElwain, in dealing with this problem.

Mr. McElwain died in 1908, at the age of 41, after laving been in business for immelf only thirteen years, but having accumulated a forture in 1902 the problem of irregularity of employment in the shoe business was brought to his attention. He was impressed with the economic waste and the suffering that it entailed. Most manufacturers closed their factories twice a year, and some of them had two additional slack periods.

"The irregularity had been accepted," Mr. Brandels said, "by the trade-by manufacturers and workingmen alikeas inevitable. It had been howed to as if it were a law of Nature-a cross to be borne with resignation. But with Mc-Elwain an evil recognized was a condition to be remedied, and he set his great mind to solving the problem of irregularity of employment in his own facto-* Within a year irregularity of employment has ceased in the McElwain factories, and before his death every one of his many thousand employees could find work 305 days in the year"

Certainly if the evil of irregular employment is accepted as an inscrutable "law of Nature," no progress will be made in remedying it. If the conal

builders has said, "We can't construct a canal at Panama because of yellow fever there," the canal never would have been constructed.

When men once recognize the possibity of correcting an evil they have made a big advance toward getting rid of it. If the evil of irregular employment cannot be gotten rid of it can at least be mitigated in some such way as Henry Ford of Detroit has suggested for his motor car factory—by arranging that the men shall be laid off in summer when there is farm work to do, eather than in the winter.

England has undertaken to meet the problem to a degree by providing for insurance to be paid men in certain trades who are out of work through no fault of their own. As a part of the insurance fund is contributed by the employers it is expected that this will provide an incentive for employers to organize their work so far as possible to avoid seasons of unemployment.

There seems to be an indispread sentiment in the Eastern States against Culfornia in its attitude toward Asiatic exclusion. Why this is so is hard to account for unless it he the sentiment fostered in favor of Lapanese and Orientals by the Eastern press. As is usual in these cases the people who want to regulate things for us do not have to bear the burden and have no first hand knowledge of the situation. There seems to be no case a sentiment in Canada.

The experience of this country with the negro question, South Africa with the Hindoo problem and the whole world in all ages with rackel difficulties teaches us that the time to meet these questions is in the beginning. The question of Asiatic exclusion is not that we are unfriendly to Japanese or any other race but that this is a white man's country and it should be retained as such.

The Railroad Commission has refused the Bell Telephone Company a rehearing on the San Jose case and the revenue derived from the Pacific States Telephone Company for the rental of instruments has been reduced from 4 1/2 per cent to 21/2 per cent. Therein is the milk in the cocoanul that spelled the death of the Home Telephone. For the American Telephone and Telegraph Company represents a capitalization of 766 million dollars. It controls the Western Union Telegraph and the Associated Press business. Hence it is no wonder that it desires to put out of business any competing concern that would deprive it of the vast revenue it receives from the rental of its instruments. The Home Telephone Company here is lts practically a thing of the past. plant and apparatus and its franchises were taken over in absolute violation of the terms of its franchise and its contract with the city and exactly contrary to the will of the people expressed at two different elections. Yet there is no effort to prevent it and to rehabilitate the system now would be a discouraging task. The hope for the future is government ownership of these monopolies, for when the idea of profit is taken out of the business we may expect more efficient service.

The Territory Of Alaska.

A Review and Abstract of Its Resources.

As the greater part of the public domain is included within the territorial limits of Alaska, the statistical report of the governor of the country and the burean of the Interior Department are of interest to all citizens. The following abstract from the report of the Secretary of the Interior to the President given from the burean of Alaska in that department shows the great resources and the present status of that country.

Aluska.

The report of the governor affords ample evidence for the statement that Alaska is about to enter upon an era unparalleled development industrially and commercially. The gold placer fields of interior and northwestern Alaska no longer give employment to as many men as in former years, but the gold output is still large; more power dredges are being installed from year to year and alluvial gold deposits carrying smaller values are worked profitably. In the placer regions, too, considerable attention is being given to quartz prospecting and mining with encouraging results. The volume of labor employed in the placer sections has decreased because of the adoption of new methods of mining in those districts and the exhaustion of placer deposits, but elsewhere an increase is noted, the white population at the present time being estimated at 26 000 The number of white males of voting age according to the decennial census of 1910 was 28,030, or 76 per cent of all males of voting age. 1900 the corresponding percentage was 68.4. In 1910 the total number of people in the Territory, both white, native and mixed was 64,356.

The volume of merchandise shipments, including precious metals and copper, between Alaska and the United States and between the Territory and foreign countries in the Bscal year 1913 was the largest in its history. exceeded the total of 1912 by \$3,028,013, the grand total for the year being \$67 .-150,519, as against \$64,122,506 in 1912. The greatest increase noted in the shipments from Ataska was in salmon where there was an increase of \$2,-\$75,791. Decreases in the shipment of gold and copper are more than balanced by the increase in other items. The merchandise shipments to Alaska from the United States amounted to \$20,179,547, as against \$18,809,270 in the fiscal year 1912.

Lack of transportation facilities continues to operate against the development of the Territory, and a comprebensive system of railroads is something indispensable if the country is to be developed along enduring lines; Supplementary to the railroads, there should be largely increased appropriations by Congress for the construction and maintenance of roads and trails as feeders to the railroads and producers of additional tonnage for transportation.

Agricultural Capabilities.—The agricultural possibilities of the Territory

are beginning to be known in part and appreciated in part, and farming has now reached a stage that insures it a permanent place in Alaska's Industries The work done at the agricultural experiment stations at Sitka, Rampart and Fairbanks has amply demonstrated the wisdom of establishing these stations. The reclaiming and cultivating of land has been greatly through the agency of the Government experimental stations. There has been, however, but a small increase of farmers during the past year, due to economic conditions which are such that there is no inducement to practical farmers in the States and elsewhere to settle in Alaska and engage in farming. Lack of available markets and transportation facilities are also prime factors which operate against successful farming in Alaska. In the Tanana Valley, however, there are a few farms which find a ready market for their produce in the town of Fairbanks and other mining camps of that section. Cattle breeding is carried on at Kodlak Island experiment station where there is a herd of about 100 head of various ages. The surplus of this herd is sold to Alaska settlers at reasonable prices for breeding purposes in order to stock the country with a breed suitable to the climate. It is also planned to develop dairy qualities in this breed of cuttle, so as to produce a hardy allpurpose cow, which the country needs. The dalry work has been held in abeyance temporarily because of the removal of the herd necessitated by the volcanic eruption of 1912, which covered a considerable portion of Kodiak Island with ashes and destroyed the There are at this station also about 100 head of large long-wooled sheep, which have been bred in Alaska and are inured to the climate. These are being bred with a view to supplying the country with a suitable breed of sheen

Alaska bas two climatic belts known, respectively, as the coast re-glon and the interior. The coast region is rainy, has mild winters The interior region is, cool summers. for the most part, dry, has severe winters and short but warm summers. The coast region is rocky and has but few valleys that are suitable for agriculture. Vegetables of hardy kinds can be grown in the coast sections, but grain growing cannot be said to be a success. Southeastern Alaska is areactically only adapted to gardening, and southwestern Alaska is preeminently adapted to gardening and stock raising. The interior region differs totally from the coast belt not only in climate but in products and agricul-While the hot sumtural capacity. mers are short, about 90 to 100 days free from killing. frost, the weather is warm enough to mature all the hardy grains. Spring wheat and spring rye, on the other hand, mature out seldom; hardy vegetables of all kinds are grown in the interior with equal or possibly even greater success

than in the coast country. The country including the region of the Kuskok-who and Nushagak Valleys is Internediate between the coast region and the interior. The summers are cool, like the coast belt, and the winters are not so severe as in the interior. Oats and barley can be mastured in the Kuskok-wim and Nushagak River valleys, but conditions are not so favorable as in the Tanana Valley in interior Alaska, and the feeding season is longer than in the coast region.

National Forests.—Fewer complaints are to be noted in the past year as to the administration of the national forest reservations, which embrace a very large percentage of the more heavily timbered areas of Alaska, due to the more liberal spirit that has been manifested in the interpretation of the regulations and the knowledge that the national forest-reservation system bas become a fixed policy of the Government. The total receipts of the Tongass and Chugach National Forests for the fiscal year ending June 30. 1913, were \$52,460.55 as compared with \$53.218.41 in the previous year. The total allotment for the management of these national forests for the fiscal year 1913 was \$36,745.79. The number of areas surveyed and platted for occupancy permits during the year was 120. The number of permits granted during the year for whaling stations, canneries. salteries, cold - storage plants, mild-cured salmon stations, stores, dwelling houses, power sites, flumes, etc., was 208; the number of such permits now in force is 332. The number of homesteads surveyed and reported for listing under the act of June 11, 1906, which provides for the entry of agricultural kinds within national forests was 16, and 20 mineral claims were examined and reported The total number of timber upon. sales made during the year was 267. The total amount of timber cut and scaled in the Tongass and Chugach National Forests during the fiscal year was 33,534,806 board feet, as compared with 44,647,410 board feet the previous year. Persons living on or near the national forests are permitted to take wood for domestic purposes free of Timber needed by prospectors and miners in the development of their holdings is also given without navment

Senting.—The total fur shipments from Alaska in 1912 aggregate \$794, 156.63, as compared with \$80,2750 in 1911. Sealing operations in the Printif Islands are under the direct control of the fur-seal agents of the Bureau of Fisherles. An actual census of the herd made in 1912 showed that there were 215.940 seals of all classes in the herd; 3.764 skins were sold at auction in London in January, 1913, the proceeds of the sale being \$130,-640.57.

Fisheries and Reindeer Industry.— The reindeer industry, established by the Government in 1892 has increased to a point where there is now an annual surplus available for slaughter, but with the exception of a few herds in the immediate vicinities of the towns there is no market for the meat. The herds are increasing rapidly. At the close of the iscal year 1912 the whole number of reindeer was 38,476, distributed among 54 herds, of which 21,68, or 62.5 per cent, were owned by natives.

The tisheries output is second only to the production of gold and other metals, and its importance to the country generally, and particularly the salmon fisheries, serves to emphasize the vital need of supplementary legislation to conserve and at the same time develop the industry to the end that the supply of available food fishes may not be depleted by mere exploiters for their personal gain. Such restrictions as appear necessary to conserve the supply of fish would seem to be an elementary requirement of proper supervision and control by the Government. The relation of gear used to the conservation of salmon fisheries that is affected by it has long been a much-debated question, and the recent extension of the use of traps in southeastern Alaska has raised another and different question-the employment of labor as affected by the stationary and movable gear, respectively ough investigation of the fisheries of Alaska should be undertaken by the Covernment to the end that legislation may be enacted which will not only conserve the supply, but which will also deal with economic and other features of the industry. An experiment station is needed where investigations can be conducted in the utilization of fishes and other aquatic products. The rebating system as applied to the private operation of hatcheries should be immediately abolished; its operation has been unsatisfactory in nearly every particular and the Federal Government should alone operate all the batcheries in Alaska through the Bureau of Fisheries. In the calendar year 1912 there were employed in the several branches of the fisheries 24,263 persons, an increase of 6,311 over 1911. Of these 10 .-101 were whites, 7,299 Indians, and 6,-\$63 orientals. There was a noteworthy increase in the number of whites and natives employed, they being for the most part permanent residents of the Territory. The total investment in the fisheries of Alaska in 1912 was \$37,549,740, about 90 per cent of which was invested in salmon fishing. The finished product of all varieties of fish was valued at \$18,877,-The total production of hallbut in 1912 was 17,146,743 pounds, valued as against 17,315.191 at \$945,502, pounds, valued at \$822,362, in 1911.

Vids to Navigation.—The need of more lights and other aids to navigation in the waters of Alaska, as well as surveys and resurveys is insistent. Three passenger and freight steamers were wreeked the past summer and others sustained minor injuries. A loss of 31 lives occurred when one of these steamers struck an uncharted rock in August last.

Natives and Other Inhabitants.—The number of Alaska insone under treatment on September 30, 1913, was 189, of which 165 were men and 24 women A large percentage of the Inmates are allens, including Chinese and Japanese. Morningslde Sanitarium, near Portland, Ore., where the Alaska insane are being cared for under a contract with the Government has been inspected at proper intervals by agents of the Interior Department Detention hospltals for the insane were constructed and occupied during the past summer at Fairbanks and Nome These hospitals were authorized by an act of Congress approved June 25, 1910, but their construction was delayed for various reasons.

The condition of the native inhabitants continues to be fairly prosperous this being especially true of those of southeastern and southwestern Alaska, the natives of those sections being as a whole self-reliant and usually industrious. Their worst physical enemy is the whisky peddler. Three special agents have been employed during the last fiscal year whose efforts have been directed toward the suppression of the liquor traffic among these people, and a fair amount of success has been attained. In southeastern Alaska 65 arrests were made during the fiscal year of persons charged with selling liquor to natives and in a large percentage of the cases convictions were obtained. An additional agent should be employed in the second judicial division, where ther is now none. agent is located in the first judicial division, one in the third, and one in the fourth. They are directly under the supervision of the governor's office.

Alaska during the fiscal year afforded a fair field for labor, especially in the southeastern section. In interior and northwestern Alaska a season of unparalleled drought created a smaller demand for mining and other labor. There were no strikes during the year and prices of labor in the several parts of the Territory remained practically stationary.

Twanton.—Nine of the incorporated towns which caused an assessment of property to be made and a tax to be levied this year reported a total assessed valuation of \$4.012.068. The tax rate of these towns ranges from ½ of 1 per cent to 2 per cent, the average being 131. Seven in the same list of nine towns levied a tax in 1912 also, when the assessed valuation aggregated \$4.123.657 as against \$1.864.017 this year.

The receipts from the issuance of hunters' licenses, shipping permits, and THREE FER 5 HOYT guide licenses are increasing annually, as more hunters are coming each year from the States and foreign countries to hunt big game. The revenue now derived from these sources is covered directly into the United States Treasury instead of into the Alaska game fund, where it manifestly belongs and where it could be used for the further protection of game. There are many inequalities in the Alaska game law which call for amendatory legislation.

Wiolog.—Patents have been granted to two coal-land claimants in Alaska These ratents were issued for claims carrying an inferior quality of coal Patents have been applied for in the Bering River and Matanuska sections, but none have been granted, while m my applications have been canceled There are extensive coal measures in these regions. The importation of coal from the States and foreign countries during

the last fiscal year amounted to 102,169 tons, valued at \$492,301. The market price at which coal is sold ranges from \$10 to \$20 a ton, according to the locality in which it is sold.

The value of the mineral output for 1913 has not been authoritatively estimated, but as a whole it will probably not be as large as 1912, due to a shortage of water for mining purposes in the placer gold regions. The gold production in the calendar year 1912 was valued at \$17.145.951. The silver production, chiefly incidental to gold mining, was 515.186 fine ounces, valued at \$316.859. The total value of all mineral products in 1912 was \$22.537.821, as compared with \$20.650.000 in 1912.

Water Power .- The utilization of the water powers of Alaska for manufacturing purposes is now receiving at-The many water-power sites found in southeastern Alaska are such as to present those essentials which must be reckoned with when hydroelectric plants are the objects to be attained. These essentials embrace a large amount of power all the year, accessibility to market, location for transportation of products, and proxused. imity of raw materials to be That there is a field for large electrochemical plants in Alaska is shown from a consideration of the raw materials to be had and the demand for them when put into marketable form. These materials include timber, lime, sulphur and many others used in manufacturing of electrochemical products.

Schools .- There are now 26 schools for white children outside of incorporated towns, employing 37 teachers, with a total enrollment of 943 pupils. The act of January 27, 1905, limits the amount which may be expended in the construction of a school building to \$1,000, which is frequently found to be insufficient to cover the cost and which should be increased from \$1,000 to \$2,-500, according to the size of the school. The law also provides that there shall he at least 20 white children of school age in a community outside of an incorporated town before a school shall be established, and it should be amended so as to make it possible to establish school districts in places where there are as few as 15 white children. A law passed by the Territorial legislature provides for the compulsory education of white children and those of mixed blood living a civilized life; and similar provision is made for the compulsory educaton of native children and children of mixed blood not living a civilized life, where such children reside within one mile of a United States nublic school

Hallroads .- There has been no new railroad construction in Alaska for several years past, nor will there be until the coal lands problem and other questions are permanently settled. Government construction and operation of railroads in Alaska is recommended Private Initiative is practically barred under existing conditions, Owing to the tax of \$100 per mile on railroads two lines have not been operated during the past year. The nonoperation of these roads has worked a hardship on miners and prospectors, as they afforded for the transportation of supplies. The Federal tax on railroads should be suspended for the present by legislative action. Wagon road and trail work the direction of the Board of Road Commissioners for Alaska. At the end of the fiscal year 1913 the total mileage of roads and trails was: Wagon roads, 862 miles; sied roads, 617 miles; trails, 2,116 miles, which latter include 253 miles of trails that are temporarily staked each winter.

Public Henith.-Public health conditions generally have been good, although during the year there have been a number of epidemics, confined largely to the native population. A serious ontbreak of measles was reported on the Islands of Kodiak and Afognak late in October, and prompt measures for the stamping out of the disease were taken by the Federal and Territorial authorities. An act passed by the Territorial legislature provides for the registration and prevention of communicable diseases, and another act passed by the same body provides for the collection and registration of vital statistics.

Teritorial Legislation.—The Territorial legislature which was established by the act of Congress approved August 24, 1912, convened for its first session on March 3rd last, the session lasting 60 days. Biennial sessions will be held hereafter.

An act passed by the Territorial legislature provides for the organization of banking corporations and the regulation of the business of banking and its supervision by a Territorial banking board. Examinations of banks, other than national banks, must be made at least once annually.

Lund Laws.-Simplification of the land laws, so far as they apply to Alaska, is desirable in order to encourage the settlement of the agricultural lands and to meet other peculiar conditions found only in an isolated country. Under the act of May 17 1884, it was provided that Indians and other persons should not be disturbed in the possession of any lands actually in their use or occupancy. Few, if any, of these claimants remain in possession of the original claims. So many years have elapsed that proof of ownership of the lend is now difficult to secure, and if the rights of these persons or their descendeants are to be recogand preserved, Congress should provide some method whereby they may obtain title,

Capitoi Butiding .-- An appropriation was made by the act of 1910 for the construction of a general office hullding, intended to provide quarters for the post office, customhouse, governor's offices, surveyor general's offices, and a number of other offices at Juneau. An excellent site has been purchased and tests of the ground were made for the foundation during the past summer. The limit of cost of \$200,000 was not sufficient at the time it was authorized and since that time a legislature has been established and the question of securing suitable quarters for it is a serious one. The population of Juneau is increasing rapidly, and in order to provide a suitable capitol huilding. with accommodations for the legislature and all of the government offices as well as rooms for the Alaska Historical Library and Museum, the cost limit should be increased to \$600,000. was continued during the year under Firms desiring news on special classes of buildings, soch on Hanks, transcriptions, Schools, Hotels, etc., will find such items all classified and grouped noder proper headings, commencing on this page. These some liems are again repeated under "LOCALATIES" in the last part of our news department.

APARTMENT HOUSES.

COURT HOUSES.

UKIAH, MENDOCINO CO., CAL-Court house additions, 1 and 2 story and base, brick, \$30,000. Architect. John Davis Hatch, Humboldt Bank

Bldg., S. F. Owners, Mendocino County. It is proposed to extend the wings on the north, south and west, and to add a second story to the first two wings mentioned. The county clerk's office will be extended to embrace the office at present occupied by the school superintendent. The latter will be removed to the room occupied by the supervisors and another room to be added on the west when the wing is extended. The auditor will occupy the corresponding offices on the south side of that wing. The tax collector's office will occupy its present quarters and in addition will include a part of the present assessor's office, the remainder of which will be taken up by the treasurer. The treasurer and tax collector will have access to each other's offices through a door, which will be a great convenience. The displaced assessor will have the part of the southern wing adjoining the tax collector's office. Underneath the wings will be a large basement. In the north basement will be the furnace room and in the south will be fireproof chambers in which will be stored the county records. The recorder's bullding will be joined to these fireproof chambers by a tunnel to which access will be gained from the hall of records by a stairway. The present front of the building will be torn away and a handsome porch in modern style of architecture will constructed of concrete. The entire building will be given a concrete finish over the bricks after the style of the city hall and the opera house. Upstairs the district attorney's offices will remain the same as at present. The judge's chambers will be made smaller and the part taken used to enlarge the law library. A lady's waiting room and a consulting room and lavatories will be placed where the present jury room and the law library are and the present wood room will be made into a jury room. The courtroom will remain the same as at present. The stairways as they now exist will be done away with and there will be a straight flight to the upper floor The larger from the lower corridor. part of the upper story of the south wing will be devoted to a room for the board of supervisors and two private rooms for conferences. The entire building will be refinished throughout and modern electric fixtures, modern hardware, etc., will be installed.

gineering and Supply Co., at \$956.

Naval Torpedo Sintlen for the West Caast.

An erroneous impression among members of the House Naval Committee regarding the availability of land on the west coast to be used as the site for a torpedo repair and test station. Some time ago an allotment of funds was made for the acquisition of territory of spitable location and requisite area for this purpose, and, as usual under such circumstances, the Navy Department encountered difficulty in obtaining possession of the tract without being charged what was regarded by the naval authorities as an excessive price. During one of the hearings before the House Naval Committee recently it was announced that the department had found it impossible to acquire the land selected by Secretary Daniels on the Keyport peninsula. Port Orchard bay, when he was in that part of the country last July, because "land sharks" anticipating the governmental nurchase and increased the price to a prohibitive degree. This is far from being the actual situation as the committee will be informed when Secretary Daniels appears before it. Condemnation proceedings have been concluded this month and papers were forwarded by the U.S. district attorney to the Navy Department last week. It is expected that the property will be delivered to the Navy Department during the next week or two. property condemned consists of about \$5 acres of land and about four miles of tide lands on the west shore of Port Orchard bay, between Keyport and Brownsville

-HALLS & SOCIETY BLDGS-

SAN FRANCISCO—City Hall beating and ventilating. Cost not stated. Architects, Bakewell & Brown, 251 Kearny street, S. F. towners, City and County of San Francisco. S. F. A. C. Regular Monthly Meeting.

Acchifects W. B. Faville, Edgar A Mathews and Toblas Benrwald Presented with Tokens of Appreciation.

At the regular monthly meeting of the San Francisco Architectural Club, held in the club rooms, 126 Post street, last Wednesday evening, Architect W. B. Faville, Architect Edgar A. Mathews and Architect Tobias Bearwald were each presented, with a handsomely carved pair of book stands as a token of the Club's appreciation of their services rendered during the last Annual Architectural Club Exhibit.

The presentation was made by President George Greenwood. Mr. Mathews and Mr. Bearwald expressed themselves as being in hearty accord with the spirit of the Club's Annual Exhibit and offered any further aid which they might give in the next exhibit. Mr. Faville, who was unable to attend, replied by letter in the same spirit.

Routine busines consisting of reading the minutes of the regular business meeting and the Directors' meeting followed. About forty members were in attendance.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

Segregated Sizes

Our products being carefully washed, screened and of uniform sizes insure sound and economical concrete construction.

OUR SIZES:

Clean I	River	r Sand	-	-	to	3/8	inch
Gravel	and	Crushed	Boulders	1/2	inch	to 1	inch
66	44	44	4.6	1 ir	ich to	11/2	inch
**	"	"	" 1	1/2 in	ich to	21/4	inch

Roofing Gravel to 1-2 inch Cobble Stones for Bungalows.

With a Modern Equipped Plant at Niles We Are Able To Give All Orders PROMPT ATTENTION

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

> ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton, New York

The Ritz-Carlton,

Montreal
The Plaza, Buenos Aires

Grand Hotel et de la Plage Guaruja, near Santos, Brazil

The Carlton, London The Ritz, London The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in unnety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100 per cent correct.

OTIS ELEVATOR COMPANY

Stockton, North Point and Beach Sts.
San Francisco

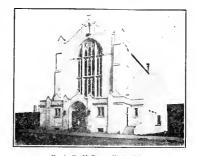

Offices in all Principal Cities of the World.

OFFICE PACIFIC TEL. & TEL. CO. Basement walls 22 ft. high. Cement plastered on inside against severe water pressure. Plaster water-proofed with Imperial Water Proofing.

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

The New York Association for improving the condition of the poor has published figures showing that families of five under its care involve a dally outlay of \$2.96 % or \$1082.25 per year. It is interesting to learn that five people can live and pay rent in the City of New York on that amount. It would be also interesting to know whether the average head of a family of five is able to earn \$1082 per year. However, if the family can live on less than \$3 per day it must be by rigid economy. Living is a comparative expression and depends entirely upon the standard of comparison.

President Wilson was elected with a iess number of the popular vote than Yet he has Bryan received in 1908. proved himself eminently fitted for the high office that he holds and has won the confidence and respect of all people whose opinions are worth while. a period of reform he has grasped the complex situation with masterly comprehension and has formulated a program that is remarkable in its unity. Industrial conditions have been such taut artificial restrictions have been placed on the life of the community and special privileges have been granted to To remove these restrictions and privileges the Wilson program has been classified under the following

Fundamental Purpose—To remove the artificial restrictions to business that have grown up with the rapid industrial development of the last century.

First Restriction—The protective tariff has unduly favored a few industries at the expense of all the others, therefore it is revised downward.

Second Restriction—Defects in the oil National Bank Act tended to concentrate money in New York, encourage speculation at the expense of current business and to produce periodical stringencies, when it was difficult to get the funds necessary for legitimate business uses. These defects have been corrected in the new banking law.

Third Restriction—Big business has used its power to capture undue advantages for itself, which tend to produce monopoly and to stille competition. These evils are to be corrected by laws prohibiting interlocking directorates and unfair methods of doing business.

Fourth Restriction—Inflation of securities of railroads has imposed a burden on business. The issue of securities must be approved by the Interstate Commerce Commission.

Fifth Restriction—Farmers have not heen able to borrow money on as favorable terms as other husiness men and the extra cost has been borne by the consumers of farm products. This burden is to be lifted by the proposed Farm Credits Bill.

Sith Restriction—The country's development has been hampered by independent of ficient governmental conditions, one of officient governmental conditions, one of officient governmental conditions, one of officient governments been the control of electron matchinery by unscrupulous politicians, This is to be remedied by a National Primary Law and its natural developments.

This is a logical and comprehensive way to deal with the question. It is all interrelated and has one purpose to effect and that is the new freedom. Furthermore the President has gone about it in such a way that he has not antagonized any interest but has gained the confidence of all.

What with the new bond issues and the large improvements that are to he made the coming year things generally indicate better times. Southern Pacific will expend 55 million dollars to prepare for the 1915 travel. Other corporations are likewise contemplating big outlays. As these things can not long be delayed the prospects are encouraging. The Annual financial review of the world that is issued by the London Times takes an exceedingly optimistic view. Commenting on the American situation it says:

"In the United States the outlook has brightened considerably in the last few In the words of our correspondent, the past year has witnessed the conversion of the country from a system of extreme to one of moderate while the banking and monetary systems have been reformed, Though such legislation is bound to be unsettling, it has been carried out smoothly. Much is to be attributed to the personal influence of the President, and there are indications he will approach the trust question in a conservative manner, and the result should be a renewal of confidence in American securities, As in other countries, an enormous shrinkage in securities has been experienced as a result of severe liquidation from abroad. Railway securities have also been affected by the increased cost of bandling business due to extra wages and taxes. The high cost of living continues, and, though the index number shows a drop from a year ago, food prices are, on the whole, higher, The year has been a 'record' one as far as foreign commerce is concerned the exports being greater than those of last year, though the imports are reduced. These, for the first four months of the fiscal year, show a marked falling off, in spite of the lowered tariff, though the increase of those classes of foodstuffs, such meat and corn, on which the duty was reduced or removed were noticeable.

Harvests were good and the total value of agricultural products creates a new high 'record'"

Technical and scientific magazines are devoting a good deal of space to the 1915 Exposition. Notably among the things spoken of with high approval are the groups of statuary and the color schemes to be adopted. Illustrations of the great symbolical groups have been printed in the best magazines and have done much to arouse interest in the great show. The grounds with their lighting have also been the subject of much favorable comment. The setting of the fair will certainly be something to be remembered by the visitors and when the great color scheme blends with the distant hills and the sea and sky there Will be a beauty and a harmony in the setting that has not been heretofore seen. These facts are seen by our visitors and the correspondents who are writing for the Eastern magazines. The grounds will soon take definite form and shape. And each day will see the unfolding of the plan that is to make the exposition a thing marvelous heauty.

An earthquake of considerable magnitude has been felt in New York, extending as far west as the Mississippi and as far north as southern Canada. In fact it has occurred in what is known as the oldest stratified rocks on the continent and in fact affected the oldest known stratified rocks in the world along the St. Lawrence river This district has long been known to be practically immune from earthquakes as there have been no material changes in its structure for ages. Here on the Pacific coast where there is a mountain range of recent formation we naturally expect a few shakes now and then. Such things are incident to a country of recent geological birth. But in the oldest rocks the changes are less frequent. And the record of this shows that such phenomena are liable to occur any where in the world In fact that the earth is now as it always has been, changes are sometimes accompanied by earthquake shocks that run along the faults and slips in the solid rock of the earth's strate

Along with the report of the earthquake in the East comes the report of the finding of the fossil bones of a prehistoric man in asphalt beds of southern California. So that for the time being public attention is directed to a past geological age. The earthquake occurred in what is known as the Devonian sholes of New York. The hones of the supposed human being antidate any record of man on this continent. So that both phenomena add materially to the sum of human knowledge If the find is that as reported it will be a new basis for investigation into the antiquity of man.

Women's dresses are too much even for the king of Belgium. A press report states that Court dresses have heen berred in Brussels by the monarch for the reason that women appeared in gymnasium gowns. "with chests exposed and showing, not only two-thirds of the spinal column, but also the knees." When the successor of Leopold bars the fashions they must have reached the limits of extremes. The Scientific American has issued a number dealing with a review of safety devices for machinery and the protection of the public and the workingman. In view of the fact that employers' liability acts in this country are of the most recent constitution and have been the subject of much comment it is interesting to note what has been done in other countries as well as our own. Speaking of this fact the Scientific American gives the followings statistics:

From a chart which was exhibited by the Prudential Insurance Company of America at the recent International Exposition of Safety and Sanitation, it would follow that there are 25,000 fatal industrial accidents per annum in the United States, and some 300,000 injuries. The mere possibility of being able to state in statistics the approximate number of our industrial casualties is a step in advance; for as late as 1908 it was impossible to estimate with any accuracy at all what was the toll we paid in crushed limbs and snuffed-out lives. Now at least know how vast is the problem to be solved, how much needless suffering we inflict and how much we lose in dollars and cents, because we have hitherto failed to realize the necessity of guarding men as well as machines.

It has been estimated that it costs about \$300 to train a skilled workman to perform a new task, and that ultimately he represents an investment of about \$2.000 to his employer. Considering the subject of accident prevention from this cold-blooded stanapoint, our business policy has not been all too wise.

Now that there is an awakening of employers to the duty which they must exercise, now that employers' liability statutes have done away with the antiquated common law conception of negligence, we may watch for a very marked improvement in deaths and injuries.

Since the enactment of employers' liability laws making secovery sure in the case of accident and taxing the husiness with the cost of these matters the expense attendant upon failure to provide necessary appliances has been increased many fold. Hence it follows that these laws will result in safe-guarding all machinery and appliances for workmen. In the end accidents will decrease and insurance will be reduced and the end desired will be effected, that of preventing of maining and destroying human life

The Chronicle speaks of the address of Uncle Joe Cannon on Lincoln's Birthday as that of a great patriot and says he speaks his full mind as to the present administration. It is certainly interesting to note who claim to be followers of Lincoln, The great President of 1861 has become immortalized in history because of the genius of his great common sense and his profound sympathy with the common people. Uncle Joe Cunnon, who has been in public life ever since the war is certainly a great example. He more than any other present public man has been responsible for the departure of his party from the principles that Lincoln promulgated. And certainly now that measures are being adopted to bring back the government by the people back to the people, he certainly has a consummate amount of gall to

criticise the people who have instituted reform, in a speech commemorating the birthday of the great commoner, Abraham Lincoln.

Cannon has the same old story of masking prosperity and the full dinnasking prosperity and the full dinner pail. On that same old cry every advantage that Special Privilege has ever received has been obtained. Protect the trusts and then they will hand you out a biscuit at the back door if they feel like it. The resources of the country should be administered by the self appointed Lords of finance and unless they are given all the privileges they desire they will withdraw their money and then the country will go sliding down a greased plank to the demnition how-works.

It is interesting to imagine what attitude Lincoln himself would take in our present day problems. It is a safe bett that he would be as far away from Uncle Joe as is President Wilson and that the ex-speaker's cry of smosthed by some prosperity would be smashed by some borney story or illustration that would leave him wondering what had happened.

Contrasted to the speech of Uncle Jue Cannon in Illinois is that of Governor Hiram W. Johnson at Los Angeles on the same day. Quoting extensively from the public utterances of the great commoner at the formation of the Republican party he draws an exact parallel with the conditions that confront the new Progressive party today. In felicitous phrase and eloquent argument he shows how Lincoln stood for the common people and the right, how he had the courage and the foresight to step out at the head of a new party that stood for right principles and to cast aside a party name when it no longer meant any thing to the people. The two speeches are as far apart as the poles and represent the two ideas in American politics today

FOREST NOTES.

The legislature of Virginia and South Carolina are considering advanced forestry legislation.

Incense cedar is proving valuable for piling on the Pacific coast where marine borers are particularly trouble-

The paper used by the government printing office each year required approximately 125 million pounds of rag pulp and 490 million pounds of wood pulp.

F. A. Elliott, state forester of Oregon, says that co-operative fire patrol associations among lumbermen for prevention of forest fires have proved their worth.

Of 606 fires last year on the national forests of Arizona, New Mexico, and Oklahoma, more than one-half were caused by lightning. Campers set about one-tenth, and railroads one-twentieth.

Roadside signs, each containing a single catchy sentence in large type, are proving effective in warning against fires on western forcests. They give the essentials and tell the importance of protection against forest fires.

"TODAY AND YESTERDAY."

the Profession of Architecture as Viewed by an Ardent Craftsman,

By W. Marbury Somervell, A.A.L.

*Architect, of Somervell & Putnam, London Building, Vancouver, B. C.

In order to definitely determine the status of the architect of today, he he of whatever nationality, it is necessary to run over briefly a history of the profession of Architecture, and, if fault le found with the position of the practitioner at the present time, peractioner at the present time, perhaps an analysis of what has gone before may be of use in finding a solution out of the difficulties of the present.

The Architect, as we first see him in instory definitely acfined, seems to have been so closely allied with the painter and sculptor that he appears to have been almost a composite sort of person. It may be that given the simplicity of existence which obtained up to the Middle Ages, many of the Architects of today would be equally as proficient in all things aesthetic, for, certainly, our art requires the highest development of the faculties of both painter and sculptor.

The age following the downfull of the Roman Empire, and lending up to the rise of the Gothic period, was essentially the age of craftsmen, and we see the Architect, sometimes a monk, agdin a mason, but always a worst evolving new ideas, and striving with the best there was in him to express his inspiration in the materials at hand.

Later on, with the Renaissance, came a wonderful revival of spirit or interest in things beautiful, which produced the great architect-painter-sculptor group of Michael Angelo Raphael, Bramante and others. These men, of wonderful talents, became preeminent in their arts spontaneously, but their rise was no doubt due in a measure to the fact that the Renaissance affected the whole of the people, and a discriminating public assisted materially in giving them recognition, In these times, with the complexities life thrust upon us by advanced civilization, the inspiration which created the Art of these men is denied most of us, but, in them, it shines forth in all their efforts.

Archi-In the Seventeenth Century tecture, as a profession, at first comes under our notice. At this time, aside from the specialists in Architecture, there arose a class of dilettanti men of means and antecedents, whose minds were bent on all the serious questions of the day; whose education deemed incomplete unless they had acquired some smatterings of our art, and some of these men developed talent of no small order. It was this phenomenon which gives us the architectural ruminations of Sir Francis Bacon, which gave Sir John Eyelyn so much material for that delightful picture of 17th Century life contained in his diacy. Thomas Jefferson, the founder of Democracy in the United States, is an exponent of this class, familiar to all of us who have traveled in Virginia. Gentleman, farmer states man and scholar, he designed several very noteworthy buildings in his time. The University of Virginia, the State Capitol at Richmond, Virginia, and his home, "Monticello," will equal many, and exceed many more residences built in this day of ambition and opportunity. Which had been practice which had been practice with the process of the control of the world.

Inko James, Sir Christopher Wren and the other great lights of English Architecture, belong to this period, and were fortunate in being able to mountain their good works and position through a cultured patronage, and the appreciation of a grateful public.

The latter part of the 18th and the early part of the 19th centuries mark what may be called the dark age of Architecture. This might be ascribed to many causes, but probably was the effect of a general unrest in the rearrangement of our entire elvilization along industrial lines-to the various chisms which divided the ranks the professon, and to the reaction from a phase of civilization in which men had been led, to one where they were beginning to think for themselves. However this may be, the profession of Architecture developed into a school of pedantry, of narrow views on style; and the introduction and use of new and unfamilliar materials added conlusion to what was already an amorphous professional situation. The education of the Architect, too, at this time did not tend to bring out what was best in men, and when a large building was to be built, the informathon at hand regarding practical materials, to say nothing of the question of design, was most meagre. Verily, be who in this period undertook an important commission, was a brave man, and all honor should be shown him, who at this time, produced results more than commonplace. member very well hearing my old pation, James Remick in New York, say that when he undertook St. Patrick's Cathedral of that city, in the 40's, there were only two books to be gotten on Gothic Architecture in the city, and these books with what he had absorbed by a few years' travel in Europe, furnished all the data which he had at his command when he designed the Cathedral. The result may be open to many criticisms now, but, still, the building is, considering its date, one of the most effective churches in America. If it be lacking in proper detail, compared with the prototypes which inspired its design, it nevertheless shows what few buildings show in these times, a vast amount of conscientious work and study

The profession of Architecture at this time was taken up, both here and abrood, by men of means, and only those who possessed real talents, who those who possessed real talents, who loved their work, rose to the top; the others maintained only a nominal practice.

During the 60's, both in England and the United States, the development of the use of new materials, the consolidation of industries, with the consequent production of wealth, created new demand for buildings, along new lines. Universal education, and the feeling of democracy had been bringing to men of all classes, an ambition never before witnessee in masse in the

history of the world. Professions which had been practiced only as a genteel pastime, or an outlet for cultured dilettantism, now became pended with earnest, hard working mendand Architecture was the first to feel the stimulus given by its infusion of new blood. Courses of study in the universities became hetter organized, foreign travel was encouraged and a revival of interest in things aesthetic extended over the whole world.

For the first time in listory Architects were not afraid nor felt oshamed to stand forth boldly to say: "I have been consecrated to a great profession, and am willing to contribute what I know to the world in return for what tecompense it will allow me. If any brother professional men, the physician, the lawyer and the clergyman, can accept a living for their work why should I be too modest to accept a competence as my return."

Since this spirit first had its birth, great changes for the betterment of munkind have taken place. Cities have been called upon to rearrange their plans-congestion of traffic had to be relieved-hygienic buildings had to be evolved to meet the demands of a more mature understanding of nature's laws. In each case, the Architect has met the situation and found the solution as it applied to his art, boldly and directly. Yet, what today is his recognition by the public which has so benefitted for centuries from his unselfish zeal and poorly repaid efforts?

Among Architects, and cultured laymen alike, it has long been a subject of respect that architecture, of all the arts, is the least appreciated. There is no profession which requires of a man so much talent and so laborious apprenticeship; none which requires so costly and conscientious training No lawyer or physician is called upon to handle affairs more important to the public welfare than is the Architect yet, in view of what he does, none is so poorly paid or esteemed as he is.

I found a newspaper clipping from one of the great daily papers not long ago which dealt to some length with the oblivion on the part of the public to the profession of Architecture and its lack of recognition of our efforts. It is a reassuring sign that a prominent New York newspaper should give such a matter more than passing thought, to say nothing of its having actually found space to say something in our behalf.

There can be no doubt that a reason must exist for first, the manufacturers have not arrived at a point of the apathy of the public. There must be something to be said on their side, or surely this subject would not come up for discussion. When we consider that the public are poorly informed as to our work and efforts—when we reduce that we are looked upon as only a necessary evil in most cases,—when we think of the many noorly trained and inadequately equipped

men who are practising in the name of art,—is there any wonder that we are often misunderstood? The worst feature, too, is that like other callings, the best suffer always on account of the shortcomings of the worst—and the whole is often judged by the standard maintained by the lowest of our calling.

To overcome their prejudices must first of all educate the public as to our importance to them and to the civilization of the times. We must be obligabusinesslike in meeting our tions, and we must always bear in mind that we are, in a manner the custodians of large amounts of money. On our decision and our conscientiousness in administering this trust depend great losses or gains to our clients; and if we by carelessness or ignorance fail to render honest and impartial service, we will not alone suffer in our own reputations, but will bring into discredit all of our brother practition-

In all things we must guard against losing sight of the fact that no matter how businesslike and practical we choose to be, we are essentially artists. Our profession is an old and honored one We must not, in the feverish baste of modern methods, allow our lamp to be dimmed, difficult as it is to keep alight. To him who has enthusiasm, the work, the study, the care in cherishing the highest professional ideals should be a joy, and one needing no further reward. If the world crown us with laurels or shower good fortune upon us for our efforts, let us accept them with a dignity and modesty worthy of our profession; and if we pass out unknown or unrecognized let it be at any rate in the knowledge that we have performed our task to the best of our ability. Our example, too responsibility is not without some Who knows what budding "Phidias" may be inspired to consecrated effort by witnessing our struggles for higher ideals? We not alone have the task of keeping our lamp alight, but we are burdened with the responsibility of seeing that it is passed on to worthy hands in the next generation.

The amenut Greeks, you will remember, had a game, the Lampadephoria, where runners took torches lighted at the altars of Prometheus, Athena and Hephaestos and passed them from hand to hand until the winning post was re-thele

Thus it is for us to so train ourselves that when the torch passes into the hands of the coming generation, it may be fanned into more vigorous life and shine again with all the splendor and brilliancy of the great ages of Architecture — From The Architect, Builder and Engineer.

Two bundred and six conventions now have been formally blooked to meet in 8 in Francisco in 1915 during the progress of the Panama-Pacific International Exposition. The last convention to be secured by James A Barr, manager of the Bureau of Conventions and Societies of the Exposition, is that of the National Conference on Weights and Measurer, which is composed of State weights and measures inspectors, city inspectors of weights and measuring apparatus and federal officials.

PUBLIC UTILITY COMMISSIONS AND PUBLIC SERVICE CORPORATIONS.

A Review of the Better Husiness Relationship Between Public Utilifies and Their Customers Resulting from Commission Control.

Ry W. D. Scott.

The public service business as a whole can be considered a compararecent development. Until bively within the last few years the executives and stockholders of public servcornorations regarded inquiries concerning their lossiness by individuals or government authorities an infringement of their personal or charter rights. This spirit, when evinced by individuals or smaller corporations. could not, in itself, he regarded as harmful to the general public. measure, no doubt, the attitude of the larger public service corporations an outgrowth of the sentiment of the individual which dislikes public criticism of private matters, which feels that his business, is his business, and if through accommodating a greater number of patrons his business nets him a better rate of return, then, the methods which he uses are his methods and are not subject to regulation by others.

With the increased volume of business under one control which follows the consolidation of small industries into larger ones, and the fact that a great many of the so-called public service corporations of today are of necessity in the nature of a monapoly, considerable injustice might result to a large number of people should the judgment or sentiment of these corporations not be based on a broad minded and liberal policy.

The very fact that the complexity of the business does not permit of all of the customers being taken into the confidence of the corporation, and does not permit of the various operating steps of the corporation being fully and carefully explained, has resulted in many misunderstandings and much dissatisfaction

A large corporation must of necessity deal in averages It is particularly difficult to convince an individual customer, who has a complaint, that it is only reasonable that mistikes and errors will occur. If this customer is treated as an average case and is shown that his complaints are known, that he represents but an average unit out of the total number of units, a natural sense of dissatisfaction results. He must be treated as an individual

Laying aside all matters of finance and questions of deliberate dishonesty. roseate promises of promoters and the sale of service for less than actual cost, the customers of public service corporations have, in many instances, come to distrust the officials and emplovees of corporations. This misunderstanding has often resulted through the fact that the particular employee. who met and answered the complaints of the particular customer, did not occupy a position which enabled him to have all the facts at hand for explaining the ways and means of the company's policy.

With subdivision of authority and

minute specialization it becomes difficult to educate a sufficient number of employees, whose general knowledge of their particular lossiness is broad enough to enable them to discuss intelligently the business policy and methods of their particular company. In many instances even the men who occupied the larger executive positions were in doubt as to just why a certain charge for service was a reasonable charge or why a certain line of policy was best for all of the customers. The principal difficulty isted through their inability to present their side of the case from their customer's point of view.

When rate investigations were first started with common carriers a phrase was used in connection with the matter of establishing rates which called forth considerable adverse comment. "All the Traffic Will Bear," was the term which brought down upon a great many railroad officials very severe criticism. If, at the inception of such investigations the larger executives had been able to explain that this phrase did not mean all of the possible revenue to be extracted from any given set of customers, irrespective of its effect on the prosperity of the community in general or the common carrier in particular, a large amount of unjust criticism would never have been

made,
There is none but will concede, that,
in order to exist, and in order to secure
the necessary capilal for future extensions, any utility must receive sufficlent revenue to enable it to satisfactorily carry on its business and earn a
return upon its investment which will
satisfy the investors who placed their
money in the business and expect security and income

If the phrase "All the Traffe would Bear," was transluted to mean not greedy extortion by overcherges, but the minimum rate which would insure a reasonable return upon the investment and at the same time put the extension of the company's business to its greatest possible limit for the hencit of the whole community no such odum as now exists would be attached to it.

When some customer brings up a particular class of service and the public service corporation is not able to show definitely and exactly that the rate or charge is based on service costs, the customer or individual naturally begins to suspect that other statements made by any tepresentative of any corporation are subject to investigation.

The general dissatisfaction among the customers of large corporations has brought into existence various regulating bodies. These regulating budies investigate the condition of the corporation, both from the question of rates charged to customers and from the question of financial responsibility to investors. The customer and investor have more confidence in a statement made by a third or disinterested party; has come to learn that rulings as banded down by the various commissions are not the matter of snap shot judgment, but are judgments rendered after due deliberation and the presentation insofar as possible, of all facts bearing on any particular case Various regulating bodies maintain inspectors or representatives, who explain the physical operations necessary to serve the customers of any utility. Operating difficulties are explained and made clear not by a supposedly blased employee, but 4y someone whose position inspires confidence.

The right minded public service corporation cannot help but feel that through this representation it has the best advocate before the people that, up to the present time, has been considered. Without public confidence, no matter how hard its officials and employees may try to render adequate service, their difficulties will be constantly increased. They may render the best possible service at a reasonable charge but due to the fact that they are not able to give that personal touch to all of their business relations, which exist in small companies, they will never gain the complete good will of all their patrons.

The bright light which has been thrown on a number of corporation practices, the publicity given by fivestigations of public service commissions and the presentation of the real facts, has been of much assistance towards helping solve many of the unsolved problems for enterprises which are endeavoring to give a satisfactory

service to the public.

It took some time at first to overcome the spirit of the individual who resented outside investigation and to establish the fact that a public utility should be managed for the public good. If the various regulating bodies may achieve but this one thing—the return of the confidence of the general public, their efforts and the expense entailed will be worth while.

The publicity given all public service matters cannot but help but bring about a higher standard of business honesty and promote a spirit of fair-

ness to all.

There has been a general awakening on the part of public service corporations that their motto can never the The Fublic Be Damned, but "The Public Be Served,"—Paper read before a joint meeting of the Portland section A. 1, E. E. and N. E. L. A.

EXPOSITION NEWS NOTES.

President Charles C. Moore has received official notice from the Department of State in Washington, D. C., confirming the prior unofficial announcement that the Republic of Venexuela will participate officially in the exposition.

The Missouri commissioners to the exposition, who visited San Francisco a few days ago in the interest of their state's participation, were surprised at the rapid progress of the exposition builders both in actual building construction and in the perfection of all other plans. They were elated with site of the Missouri pavilion, bordering San Francisco Bay, and declared that the construction of their state's building would be commenced as soon as possible.

Bids for the construction of Festival Hall, which is to be one of the most magnificent buildings of the Panama-Pacific International Exposition, were opened February 2nd, 1914. The constructon will be rushed. Firms desiring news on special classes of buildings, anch as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same liems are ugain repeated noder "LOCALATIES" in the last port of our seven department.

Approved Projects.

The following bills have paseed both houses of Congress and will be approved by the President.

H R 11316, authorizing the construction of a bridge and approaches thereto on the Columbia River at or near Vancouver, Wash, by the Missouri, Kansas & Texas R R, Co.

Additional Pier at Cristobal Terminal. At a meeting of the hoard of directors of the Panama Railroad Company, held in New York City on December 22, the construction of an additional pier in the dock system at the Cristohal terminal was authorized at a cost of approximately \$1,160,000. This pier which will be known as Pier No. will be of about the same size as pier No. 8 and, although there will probably be some modifications as to de tails, the plans, in general, will conform to those for piers Nos, 8 and 9, now nearing completion. Borings on the site of the proposed pier, which will be separated only by the width of the slip from pier No. 8, directly south, have been begun, Mr. T. B. Monniche, formerly designing engineer in the department of construction and engineering, in charge of the details for the emergency dam, was transferred, effective December 31, 1913, to the Panama Railroad and will have charge of the design of the new pier

The matter of abandoning the old Coon docks of the railroad company on or about January 1, 1919, came up at the directors' meeting on December 22, but in view of the fact that it will be 12 months or more before dock No. 7 can be completed, definite action was most tomed until a latter date.

CONSTRUCTION WORK AHROAD,

ARGENTINA.

[Review of River Plate, Buenos Aires.] Municipal Project for Workmen's Dwellings.

The budget law as projected by the budget committee of the Chamber of Deputies includes a clause exempting from payments of import duties material's destined for the construction of workmen's dwellings by the municipatity of Buenos Aires to a maximum of \$250 gold per house. It will be rememhered that the municipality recently entered into a contract with S. H. Pearson & Co. for the erection of 10,000 of these houses.

Railway Construction.

As a result of representations recently made to the national government by Dr. Ahumada, governor of Catamarca, the executive has promised early commencement of construction of the railway from the capital of that Province to La Cocha. Work on the first 6 miles will soon be started.

CHINA.

[Vice Consul George C. Hanson, Dalny, Manchuria.]

Railway Improvements.

The South Manchuria Railway's estimates for the next fiscal year include \$5,500,000 expenditure for earthwork, retaining walls, bridges, stations, rolling stock, construction of dredger and hopper barges, harbor works, hotel, etc. [A copy of items may be obtained from the Bureau of Foreign and Domestic Commerce.]

ACTION.

The nations are a series of short experiments. A nation may disintegrate inside of a century. It may flower inside of thirty years. It would be possible that a Middle-Western town like Cedar Rapids should tomerrow begin to put forth a group of heroes, who should overrun the earth with the charm and vigor of their ideas. sudden quickening, mind catching flame from mind, and once again you would have the miracle of Plato's Athens, of Elizabeth's London.

If now and again some man had not decided to stop drifting and take hold of things and reshape them, there would have been no discovery, no invention, no art. He might have said, as many like to say: "Why not let my big idea rest quietly? There is time enough in the long future. Why be in a hurry? Why so hot, little man? There is quiet sleep in the churchyard for the men that have gone before, and soon I too will be there." But, prevailing, he said:

"Now is the time, and the place is here, to bring my idea to action. I insist on being heard. Here is the plan. We will not postpone it till next century. We will try it now."

It is our business to make our ideas prevail. We are not to go silent, ner to tetire from activity, believing that our nation is long-lived, and that our thought has an eternity in which to come to pass. We must speak up. We must strike early and strike hard. The time is short. It is right to wish to get something done in our own lifetime -From Harper's Weekly,

Firms destring news from certain leculities like Sus Francisco, Los Angeles, Portinaid, Seattle, etc., will find all such liems, commencing on this page, all carefully classified as to location. Thrse same liems are repeated in the fore part of the news department, under distinct headings, such as Banks Churches, Hatels, etc.

SAN FRANCISCO.
